Thanks for looking that up, I was hoping someone with their collection in
better order could find it easily. I know I looked but it's not where
I expected it.

I wasn't for a minute arguing that these every went into production,
and I can even agree tht they likely never saw prototypes, but
the ad was not a figment of my imagination.

I was still relatively new to the hobby when that issue arrived
with that ad. The CX-7 had always been around since I started
getting QST in early 1971, and I soon collected enough recent
back issues that the rig was pretty familiar to me, and it did
seem a leap ahead of much of what was available. People forget
(or don't know) that the rig really stood out when it was introduced,
not simply because it was almost completely solid-state at a time
when tubes were still fairly common, but because it introduced some
new techniques at the time. It took about ten years before other
rigs that seemed on the same level became common.

And I precisely remember that ad because all those neat pieces
of equipment were something to drool over. I didn't question
at the time that they weren't going to be produced, though it
meant little to me either way since it was all out of my price
range. It was only when there were no more ads for those
rigs that it because obvious that we weren't going to see them

in production.

Was the Emergency Beacon ad in that issue, or did those rigs
come later? They were 2meter FM rigs that had plenty of bells
and whistles, again at a time when the norm were pretty plain.
I thought some were produced, but there was one ad that showed
a more extensive line, and then shortly after the company disappeared
(or maybe the ad was the last time the company was heard of). For
some reason, I place the ad in that November 1972 issue, but I'n
not as sure of it as with the Signal One ad.

You might want to ask the good folks on the Premium-RX list. There are
some RA6790 owners there.

Look at

<http://ml.islandnet.com/mailman/listinfo/premium-rx>

If nobody comes up with a quick answer there's an old Stancor catalog
(1948) at BAMA. It should be in there.

Frank, I ran into that 'problem' also just this week. In my searching I found a few random sites out there with a piece here and a piece there, nothing as extensive as the 'original'.
BAMA has an old Stancor catalog, there's a couple here - http://www.amfone.net/online.htm

Have you tried accessing via http://www.archive.org (which doesn't seem to be working at this moment).

Source record: 24637

Hello,

I have an old Hallicrafters s-120 (made in 1966). I have been having trouble with the volume control. Everytime that I turn the volume on about 1/8 way there is a very high squealing coming out of the speaker. The question I am asking is: What could be causing this problem? I've been told it's either the speaker or the potentiometer. Any ideas?

Thanks for any input,
Bruno Hache

Bruno,
It sounds like one of the tubes is microphonic, that is acting like a microphone to produce feedback. Turn the radio on and set the volume control to just below where the squealing starts. Then, using the eraser end of a pencil, lightly tap each tube. The microphonic one will respond to your tapping by producing the squealing or other noise. Replace the tube that is causing the problem. Hope this helps you, Mike KF6KXG

I suggest rebuilding the old one.

You might be able to find one close in the Antique Electronics Supply, which carries some currently manufactured metal can types.

But it'll be a lot easier to gut the old one and pot new caps inside with RTV.

Hello, Keith

Be very careful with your new Racals.
Unless you have the semi-rare optional preamp installed,
the quad FET first mixer on board A-2 is dangerously exposed
to static damage. I stupidly used a type N to SO-239 adapter,
and plugged in a random length of wire in the shack,
to try out my receiver, and that ruined one mixer.
Now I use an old Ameco PCL-P Nuvistor preamp to isolate
the Racal FET's from the antenna.

The A-2 first mixer uses four Siliconix type SD-215DE FET's,
and it requires unsoldering the tin box cover on the A-2 board
to get at them. This type of FET has built-in static protection,
but the protection is only between the gate
and substrate, and it is the channel of the FET's
which is exposed at the Racal antenna connection.
The manual doesn't give the schematic of the mixer -
just shows it as a black box.

It is also wise to have an assortment of spare tantalum
electrolytic capacitors around. I've had one
of the little guys go up in smoke, nearly taking out
the regulated power supply. Used boards
bought on eBay also often have some bad tantalums.

Check out the G.E. Datastor back-up battery on the CPU card
(A6A2). If that battery leaks, you are in trouble,
since the boards aren't conformal coated.
I recommend replacing it with a Varta "Mempac"
2.4V 150mA-H (same physical size battery).

Caution: Do +not+ run the receiver self-test function
unless you need to (due to installing new IF filters, say).
The self-test will automatically determine the bandwidths
of the plug-in crystal or mechanical filters, and store
the result in the battery backed-up RAM
(used by the CPU to set BFO offset frequencies).
If your receiver fails the self-test, even for a minor
fault, like an AGC problem, your receiver can be left
brain-dead. You will have to run the self-test
with that CPU card plugged into
a good receiver, using the same filters as yours,
to recover the needed RAM data.

Gary Wingerd sells the Racal R-2174(P)/URR
"Preliminary Technical Repair Instruction Manual".
Although that manual is based on the use of Racal factory test
fixtures, it has many alignment instructions and signal
levels which were left out of the basic manual.
The basic manual is very skimpy, mostly intended
for board-swapping level repairs.

I like my Racal. The audio quality is excellent,
and the synchronous a.m. detector with 6.9 or 18 KHz
bandwidth makes for hi-fi a.m. listening.

73,
Ed Knobloch

> http://www.amfone.net/online.htm

Naturally, this only happened when I came up with 3 pieces of oddball
iron to ID quickly for the first time in 3 years<G>. BAMA also has
UTC & Thordson, but one must d/l the whole schmeer rather than access
pages - which may be a d/l of 38meg on a dialup, woo-hoo. And of
course, Stancor is the only one I already have. :-)

It's too bad Acrobat files are so huge, too. I noted some BAMA
submitters have used .djvu for big docs, which is a far smaller file
and much better quality. The reader plug-in for Internet Exploder is
a free d/l that self-installs in Windblows, and I blv also avail for
Netscrape (but not Opera). Highly recommended.

Mark, what are your plans for the fest. I will be departing at
0500-1015 Saturday (albeit with the forecast of light rain). I have 2
get-in (read: vendor)tickets so you could drive in and potentially park
at the set-aside area outside the indoor tailgate or at a tailgate spot,
itself. Greg Sikora, K3GSS, (carpool rider) will be going with me
(Saturday). You are welcome, of course, and can ride with us. FYI, I
plan to depart about noon each day, or that's the plan. Your plan or
druthers?

E.H. Scott was a native New Zealander who came to the US and founded Scott Transformer Co in 1924. The name of the company was changed to Scott Radio Labs when it was re-located to Chicago in 1931. Scott sold most of his interest in the company when he was demoted from president to sales manager 1944 and resigned in 1945. He died in his retirement home in Victoria B.C. Canada.

The E.H. Scott Morale Receiver is interesting in that it was the only receiver made during WW2 where radiation from the local oscillators were heavily suppressed. Up to that point, the Germans learned to DF a convoy by tuning into the signals given off by local oscillators. Some German subs could detect these signals from as far as 100 miles at night.

Needless to say, Scott sold many receivers to the U.S. Navy.

Still they remain fairly rare on the market. I'd offer $60 to $80 and see if the seller bites. You will probably have to changed the electrolytic caps and a few tubes.

Chuck,

Tried to send the following e-mail but it didn't want to fly,

>>>am I close?<<<

Exactly! Paper backs (both with a little over 100 pages) with descriptions, schematics and conversions. Volume 1 (1948) looks like it's been around the block but readable. Volume 2 was copy righted in 1948 also but is a second addition and is in pretty good shape.
If you are in the continental U.S. (lower 48) shoot me a mailing address and I'll mail them to you and you can just send me what ever the postage is, doubt it will be much unless they jack up the price due to printed material.

Some (quoted) facts well stated, others tend to carry a bias.
>
> The E.H. Scott Morale Receiver is interesting in that it was the only
> receiver made during WW2 where radiation from the local oscillators were

Absolute BS. Now the Scott story takes a twist. Scott mfgd a whole
slew of non-mil radios in that era. So did many others. I've got a
cheapo PECO radio in the closet that was sold in PXs in places like
Tarawa. No 'special' filtering or shielding of the LO.

Up to that point, the Germans learned to DF a convoy by
> tuning into the signals given off by local oscillators. Some German subs

I'd say they are fairly common, at least on ebay, and more like
150-200... and three dollars worth of hastily ho-rigged-in replacement
caps would only be a negative to the sets value as a collectible.

Of course I could be wrong also...

I did not see any listing in the ad index for Emergency Beacon, I did not look at each page as there are 320 pages in that issue.

I got a CX-7 about 6 months ago, it is a very nice rig, and fits in real well with all my other boatanchors.

I've posted a page about the Scott REE receiver from Fred Osterman's
"Shortwave Radios Past & Present" on the alt.binaries.pictures.radio group.
The REE seems very similar to your description of the SLR-12-B radio.

The circled numbers on the lower chart mean:

1 -- New price unknown
5 -- Used price unknown
6 -- Insufficent information available for a value rating

No prices, but the other info may be useful.

Here's a sales flyer I found very interesting about EH Scott and one of his
fancy civilian shortwave radios:

http://www181.pair.com/otsw/Scott.html

Lots of receivers had dual pentode RF stages to minimize oscillator leakage.

I'd think that regenerative recievers operated by careless operators were
the real risk of giving a ship's location away. Detecting a normal superhet
at 100 miles seems iffy to me.

I have a bunch of BA items listed on ebay, including a Hallicrafters SX-42,
National NC-303, Hammarlund Speaker for the HQ-180, and a bunch more:

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=oldradiostuff

Or just search on my user ID: oldradiostuff

Thanks

YES BUBBA... but we are talking about a Military SLR-12-B and the statement above is very true. As for the "whole slew of" bit - civilian radio production (along with a whole lot of other things) was severely reduced during the war years.

eBay is a great place to sell - bad place to buy. The gentleman was buying the radio. I wouldn't pay more than $80 for it myself. But then again, I wouldn't pay $8,000 for an SX-88, but that just me. I'm not a blonde, bloated burned out musician. ;^)

Seen No SLR-12-B's on eBay for the past year.

Right about electrolytics - yep they cost bucks - which is why Rich should pay even LESS for that old Scott!

This is fun! Well yea about the regen for sure - Some of those Superhets
leaked just as much. (Like a T.O. in a leatherette covered plywood box)

but think about this... middle of the ocean -
late at night -
100's of miles from anything -
floating around in a sub with everything turned off -

During a war under radio silence with just receivers turned on...

100 miles seems possible to me.

2104. Uher Reel-to-Reel Connections?

Newsgroup: rec.radio.amateur.boatanchors

I have some 1/4" tapes I'd like to transfer from an old Uher 4000 Report recorder to CD.

Problem is that the "Radio/Phono" connection is a 5-pin din and I'm not sure which pins (if any) will give me a line-out to feed to a soundcard line in. There is also a 2-pin "Speaker/Earphone" out, and a mystery 6 pin din out marked with a triangle (power?).

Any suggestions from Uher gurus?

Greg.

The page I posted on the binaries says the Scott REE was used in the crew's quarters. Was the well shielded Scott radio provided so crewmen wouldn't be tempted to bring their own radio on board?

> but think about this... middle of the ocean -
> late at night -

I think "possible" and "iffy" are two ways of saying the same thing from different viewpoints. I suspect the usual thunderstorm crackle from South and Central America, the Caribbean, the Mediterranean and Africa would overwhelm local oscillator radiation from a superhet at much less than 100 miles nearly all the time.

All bets are off in the case of a regenerative receiver being used with the detector's regeneration control turned up into the oscillation region in order that an anticipated CW signal could be heard more clearly.

The posted page also says the Germans were suspected of being able to listen in on the 455 kc IF radiation. This would even more tenous than local oscillator radiation. Again, not impossible, but I doubt long range detection could be done with any reliability.

I don't doubt ships were being detected at long range, and using well shielded receivers was a wise precaution. But I'll speculate that German code breaking detected at least as many ships as long range direction finding, and it wasn't immediately obvious to our Navy just what tipped off the ship's location.

To the pool of skilled operators and technicians:(excerpt Part 97)

Nearly every posting I place on this newsgroup, I receive an average of 40
requests for pictures from tirekickers and people who can only afford to
post my pictures on thier wannabe collector web pages. (This has nothing
to do with those of you who used my pics to relist what I sold you on Ebay)
99% of you don't render the common courtesy of responding to say "thanks,
I'll pass" or even "pack it in your ass", while somebody that wants it waits
in line.
(They do not wait anymore boys).
As a public service to help prevent the above described folks from wasting
thier
precious time, please don't waste mine by asking for pictures.
There's plenty of pictures on the net of every conceivable ham rig to
gawk at and drool over.
If you don't believe my descriptions, are unable to understand what you
read,
or unable to articulate a query, don't blame public education, and by all
means,
PLEASE ignore my listings.
Thank-you, thank-you very much
Jim WA9Z

That was just a USENET cop telling you to use FA in the title here
so that your listing would not offend him.

FS = For Sale

FA = For Auction

Some of the cops get pretty testy.

I have the opposite suggestion. When you list a link in a newgroup,
add a couple lines of description so that those of us who read
offline can decide whether or not we want to dial in and read the
full story on the item.

I might not be interested in a Heath weather station or TV but
certainly someone is. I'm interested in the SB series and some DX
and HW items.

What's this all about? You're selling stuff and complaining to
thousands of USENET readers because a few potential buyers are
asking for pictures?

You do know about "free" websites that'll let you post pictures?
That way, you upload the pics once and include the links in your
for sale listing.

Either way, dealing with 40 requests for pictures when you have
something for sale is better than ZERO requests.

Well, I had a 4000 Report L until it got stolen.

The 2 pin DIN spkr socket is indeed 'speaker level / earphones'. It's a mini Class AB circuit running off the battery voltage - 6V IIRC.

I actually replaced it with a (phone) jack socket and used that as a low-Z output. It's just a monitor out - as in playback or monitor input in record mode. Very handy. The left hand ? level control adjusts the output. The quality seemed OK as it should be when driving a line input from an AB stage.

Jim, I'm not interested in "plenty of pictures" of something you offer: I
want to see what _you_ are selling.

I want to see if the shafts are straight, if there are any burn marks, if
the knobs are original, if the faceplate is worn or scratched, if the cane
metal has any unwanted holes in it, if the shorting plugs are still there,
if the shaft guide has shifted position, if the leads to the switch gangs
are twisted, and if there are obvious signs of neglect.

Your descriptions don't tell me that.

As for the lack of feedback, if you're waiting around for some buyer to
call, good luck. Tirekickers and time-wasters are part of the trade, so if
they bother you I suggest you develop a thicker skin. That's just business,
and you're running things like it's 1904, not 2004.

Thanks to all for taking the time to reply. The historic background from Biz & Bill puts this set in some context for me. Frank, thanks for posting the Ostermann page to the binaries. Ron I appreciate the website resource. If you are interested I have posted a photo of the Scott , as well as some other items I found, at the following link;

http://home.att.net/~richs_radios/Whats_New.html

Also a friend supplied me with a large Scott advertisement via email. I cut out the image of a Scott 'marine model' set and posted it next to the SLR for comparison.

I would suggest using another machine for playback. The Uher 4000
(The Report-L anyway, though not the Monitor) was much better at recording
than playback.

>Problem is that the "Radio/Phono" connection is a 5-pin din and I'm not sure

You can get an adaptor cable to take the 5-pin DIN to four RCA connectors
(two of which will be unused since it's a mono machine) from Radio Shack.
It's a standard item although you'll probably have to special order it.
I suggest doing this.

The 6 pin DIN has power as well as inputs and outputs, and is intended to
slave the Uher to a home stereo system with one cable.

If you're trying to sell a 75A4, I want to see pictures of _that_ 75A4
and not pictures of a pristine 75A4 from Osterman or some museum. I'm
not thinking about buying the one in Osterman or the one in the
museum.

If you want to sell something, you've got to be willing to convince
the prospective buyer that it's worth buying. That is, that the
one _you_ are selling is worth buying: in good condition, not full
of mouse droppings or leaves or less desirable stuff, not rusty,
not missing knobs and meters, not bent and dinged and scarred and
scratched, not modified by someone who shouldn't have been allowed to
drive a wheelbarrow.

So if you're not willing to send pictures to demonstrate that, then
I don't have the time to waste in trying to deal with you.

You do have one unique distinction, though it's not one to be envied:
You're the very first person I've *plonk*ed in this newsgroup.

The 5-pin din was pretty common on old European gear.

1 Left audio in
2 Chassis ground
3 Left audio out
4 Right audio in
5 Right audio out

I believe the mystery 6-pin is for the mic, which had a built-in remote control.

Hope this helps!

>All bets are off in the case of a regenerative receiver being used with the >detector's regeneration control turned up into the oscillation region in >order that an anticipated CW signal could be heard more clearly.

ISTR reading once that regen sets (and the Navy was using plenty of them, especially for LW and VLF) really were a major problem. To copy CW, you do have to adjust so the set is just barely oscillating. Fortunately, most Navy regens had one or two RF stages ahead of the detector. I had an RAK VLF set that was just incredibly sensitive and selective, with 3-gang tuning and individual trimmer knobs on both RF stages. There was an HF edtion of this set too.

>The posted page also says the Germans were suspected of being able to listen >in on the 455 kc IF radiation. This would even more tenous than local >oscillator radiation. Again, not impossible, but I doubt long range >detection could be done with any reliability.

IF radiation would be pushing it, but it has the advantage that there's only a very narrow band of freqs to monitor. An advantage (for the U-boats) of regen rx is that one could listen to the enemy transmitter freqs, which you'd be monitoring anyway, and a steady "carier" would mean a nice plump target nearby.

As for code cracking and good old "loose lips" in dockside bars, when enemy U-boats are sinking your ships, you don't *know* why, you just grope for possibilities, and radio receiver radiation was one explanation.

Along those lines, our Navy did fool the U-boats into thinking that we were picking up on their super-regen radar detectors, thus causing them to shut those off, making it easier to catch them on the surface. --Mike K.

Beautiful photos, of sets clear back to the 201-A days, and later ones with
more chrome than a '58 Olds.

The RCH entry is a single photo of the same radio I have, with a Hammarlund or
SX-28 style dial. I believe "RCH" is also used for a slide-rule dial type
Scott.

My RCH is probably a backup comm rx, not a morale entertainment set, since it
unfortunately sacrifices the AM BC band to include two LW bands, as for marine
communications. It does provide for feeding a second audio source into its
output stage; unclear what that was used for. The audio output is a single 6F6
or 6V6 or the like, so this RX would not be driving speakers all over the ship.

I think at first they were.... until a ham plugged in headphones - pulled the 6L6 audio power amp tube out with heaters and B+ voltages, got a cap and wound a coil and had himself a nice little 2 watt transmitter. I can see him asking the captain where's the best place to hang a 40m dipole. HI HI Of course, a real spy would simply key the local oscillator to send a ships position. Throughout the the rest of the war sailors were not allowed personal radios or tube equipment of any kind. I believe that rule still applies to this day about personal electronics.

As for the Scott SLR-12B - the typical install was to stack up 6 of them together tuned to different stations and install squawk boxes with 6 pushbuttons and a vol control throughout the ship. You can select which audio feed you could listen to but only morale officer decided which stations to tune.

You are right - but we were talking about the North Atlantic sub activity - 45 to 55 deg lat. Very few lightning strikes within this region - it's quiet most evenings even in the dead of summer. A dead carrier, even a weak one is easy to find with the BFO just barely audible and the AGC turned off.
>

You must remember that LF "Huff-Duff" was pretty advanced at the time. LF airport beacons were the primary form of Aircraft and coastal ship navigation. (They still exist to this day but I doubt few pilots even know how to use them.). Almost every ship and plane had one of those funny loop antennas and if you look at old pictures - you'll see that German subs had them too. Even though there were very few Nav beacons in Europe during the war. !!??!!

You might be right about the range but NAVY was concerned enough to give large RCVR contracts to Scott. The ARMY didn't care and they got Echophone EC-6's and Halli RE-1 Sky Courier's. GI's could carry (later drag) their own radios and many did. T.O.s were the most popular with officers. Poor solders had the "Gillette Blue Blade" special. ;^)

> I don't doubt ships were being detected at long range, and using well
> shielded receivers was a wise precaution. But I'll speculate that German
> code breaking detected at least as many ships as long range direction
> finding, and it wasn't immediately obvious to our Navy just what tipped off
> the ship's location.

Some Salvagers came across a sunken German Sub just off the New Jersey coast. Clearly they were parked several miles offshore watching for the start of a convoy. Somehow they signaled the German High Command which ordered the wolf pack to form a sub screen (straight line of subs 100 miles apart) and wait for the convoy to pass. Top speed for those concrete "Victory" ships was about 6 knots so, for the most part, they were sitting ducks once spotted.

Historically very little has been written about the bravery of merchant seamen. If your ship was hit and went down - You would watch convoy ships pass by because they were under orders not to stop. You would have an hour or two splashing in the water till the end. If you could find a life boat - you would be 1500 to 2500 miles or more from land. A slim chance at best.

Long Range Flying boats patrolling the North Atlantic and improved Sonar technology finally ended the Nazi sub terror.

So you see, there is a little bit of history in every old radio ... :^)

What a great source of information/history you all have provided. This was a third party transaction. Sadly the primary party (the owner?) called off the deal. It appears he has discovered another buyer (?). It seems I missed my chance and (sadly) won't see any of these items any time soon. Life goes on... Thanks to all for the assistance and especially the history - great stuff! Any additional history is appreciated and encouraged since there does not seem to be much recorded except in the minds of the survivors.

FS: Hammarlund HQ-120-X receiver, 0.54-31 MHz. Pretty good physical condition, minor paint scratches on front panel, but that's all. No rust. All original knobs. Dials and all other controls turn easily. Original manual with schematic, in excellent condition. All tubes are present. When plugged in and turned on, nothing happens, no sounds, no lights or filaments, completely dead. Can supply digital photos. Make an offer.

I'm not certain, maybe just a coincidence, but there's a Tom Gibson I know/met who's has some ties to Montana. He may have worked up there for some time. This fellow was also a maritime operator and is currently (I hope!) an officer on the museum ship John Brown (Liberty Ship in Baltimore). Last time I saw Tom was aboard last year. Might this be the same person?

I know about someone who died, he used to get high on the stuff and
one day fell into a tank of trichloroethylene. 7 foot X 2 foot x 5 foot deep
heated tank with cooling coils. That was 15 years ago.
We used to call it trico and you would not have a drink after working on it
all day
instant drunk!

Great for removing grease and dry straight away.

Lee.

That brings up another couple of questions. Did the merchant marine have receivers as good as the US Navy had? Were the Merchant radiomen as well trained as the Navy radiomen?

>or 6V6 or the like, so this RX would not be driving speakers all over the ship.
>73, Mike K.

You can see one installed in a Mackay communications console in the
4th ed. of THe Radio Manual by Sterling & Monroe, 1950. Pages 511 to
553 are devoted to this console, including a fold-out schematic of the
Scott receiver itself (called an SLR-F). It was paired with a Mackay
128AV (15 - 650kHz, battery-powered)

Scott made a big deal of low-radiation receivers and German
direction-finding, but it's far more likely that the low radiation was
only to avoid interference with other receivers on the ship. It's a
very crowded RF environment.

I had an SLR12 once and its dial-drive mechanism was sluggish, not
a set you'd want for band-cruising. They were after all meant to be
left in one position and not re-tuned often. The geared dial on an
RCH works like a dream, in comparison.

Does this mean the RCH served as the audio output stage for the Mackay? I can imagine a lot of military rx wer made with only "line level" or "diode load" outputs, meant to feed RTTY decoders and the like, and the RCH wuld provide a speaker audio driver for such rx.

> Scott made a big deal of low-radiation receivers and German

True, and this is why the R390 series has such a rugged multi-tuned front end, and well into the sorry-state era was specified for shipboard use because it could stand up to the onboard transmitters.

> I had an SLR12 once and its dial-drive mechanism was sluggish, not
>a set you'd want for band-cruising. They were after all meant to be
>left in one position and not re-tuned often. The geared dial on an
>RCH works like a dream, in comparison.

Right, the RCH tuning is silky smooth. Too bad Scott didn't put a vernier 0-100 readout on the knob shaft for ease in returning to a station, although the 0-200 logging scale is better than nothing. I suspect some ops may have put a 0-100 skirted knob on that shaft and scribed an index mark on the front panel.

Since the RCH has a BFO with pitch control, I tend to believe it was for backup comm rather than entertainment. Lack of xtal filter makes it only a backup for CW.

Tnx fer the commentary, Alan. 73, Mike K. AA1UK

>
Yep and it works both ways - America's version was that the Army Air Corps were giving carrots to fighter pilots to improve their eye site and this was why so many German planes were being shot out of the sky. AAC even had staged pictures of pilots at a mess hall with plates of carrots and standing under airplanes chewing "ala Bugs Bunny" carrots. Life magazine ran those pics and German pilots soon came under orders to eat more carrots.

This was a cover story for the fact that front line bases had started receiving planes equipped with Radar. Carrots do nothing for eye site but try telling that to your mother. Funny how these myths are still around.

>
> That brings up another couple of questions. Did the merchant marine have
> receivers as good as the US Navy had? Were the Merchant radiomen as well
> trained as the Navy radiomen?
>

Shipboard receiver installations varied widely depending on how prosperous the shipping company was. Some were every bit as equal to any land installation while others were little more than (as an old timer once told me) a Marconi turd with a cat whisker stuck in it.

About training - well first - many Merchant R OPs's joined the Armed Forces right off - so that left those with age, foot or vision problems or retired OPs to man the radio shacks. Most of these men were trained by RCA Worldwide Wireless or Marconi. ALL had many years of practical experience on the high seas.

Navy on the other hand had a problem - ships were being built at a fantastic rate and only recently trained "8 Week Wonders" Radio Ops who never had been out to sea to man the shacks. The Navy had to sprinkle experienced Ham Radio and Merchant Marines as lead OPs throughout the fleet to keep things moving till the green horns got up to speed. As it was, there were a number of comical foulups related to mis-communications.
>
>
> The survival rate of German submariners wasn't particularly high as the war
> came to a close, either.
>
Yep - Ive heard of stories of passing Convoy ships firing their deck guns on German Life boats - a big Geneva treaty NO NO. Also heard about s broken down U-boat with the whole crew lined up outside on top waving white flags.

Passing ship turned toward it, increased speed and rammed it and kept on going. I think it was safe to say there was some serious hatred there.
>
> I'll also mention code breaking in the anti-sub war.

hmmm ok - where should I start?

We are of course talking about the British breaking the codes being sent and received by German Enigma Code machines. Brits are proud of saying their collection of eccentric mathematics wizards and puzzle solving misfits broke the code in something like 3 or 4 weeks.

What is glossed over is that the front line German Radio OPs were somewhat lazy and seldom if ever changed the code wheels on the machine. The German high command believed their code machine unbreakable but even so still changed the code wheels on a weekly basis for high level comms.

They believed even if front line comms could be broken - they were of little strategic value to the enemy. Of course we now know, if you broken low level comms you can follow the messages up the chain and stand a good chance of breaking that code if you know what is in the message being sent.

The Bits did this and now had access to most of the Germany Armed Forces comms.

Now what to do with it?

What now follows is my own speculation - much of the story still remains classified to this day. I can only go back and look at the historical facts and come up with some fairly logical deductions -

..in other words - I'm guessing...

(1) Clearly - Churchill could have told the Americans early on - He choose not to do this until much later.

(2) Britan could not directly go after subs and ships. To do so would tip the Germans that the code was broken and force them to change their wheels on a daily (or hourly) basis. Remember it took 3 weeks (and I suspect much more) to break each code. So even though they had a stolen Enigma and the tools to break the code - it would have been of little use if the code was changed daily.

(3) America at the time was isolationist. The Brits saw what a single Jap Attack at Pearl Harbor had done. Almost overnight, America was at war - with Japan. Most Americans wanted to fight the Japs only - they had no beef with Germany.

(4) The Lend-Lease convoys were US Merchant Ships carrying U.S. War Material protected by the U.S. Navy Ships manned by US Sailors. The Brits knew the exact locations of German subs out to sink the convoys but kept quiet. The loss of some shipping and American lives would keep the United States focused and involved with the war in Europe.

(5) As you can imagine - the Americans were livid when finally told. Not so much for the loss of American life but for the fact they were so well played by Churchill.

(6) This and the massive defeat ("Heroic Retreat" as the Brits tell it) at Dunkirk were probably the two major factors in selecting an American as Supreme Allied Commander.

Of course all this is just idle speculation...

I think the code breaking used in the anti-sub effort came much later when it was certain America would join the British War effort.

But we may never really know. -B

One comment to Mikes Post - Many WW2 Comm RCVRS didn't have Phasing or XTAL Filters - Radio OPs were trained and expected to copy CW perfectly even with a bunch of signals blaring out of the headphones. Just par for the course back then. Myself - I can copy 30 WPM CW with 5 other stations nearby.

You train your brain to focus on just one tone and filter everything else out. That ol noodle is a remarkable filter. I often listen to a Halli S-38D on the 40 meter CW band at night and that's what 6 or 8 kc wide??

2143. Charlotte Conference wrap-up

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-03-28 03:22:44 UTC
From: "Ron, KC4YOY" <kc4yoy@carolina.rr.con>
Message-ID: <8yr9c.18545$tP4.1401124@twister.southeast.rr.com>
Source record: 24504
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I'd like to thank everyone that came to Charlotte
to take part in the CC-AWA Annual Conference
over the last 3 days.
The weather was great, and the turn out was great.
If it wasn't the biggest show we've ever had, it was
pretty close. The parking lot where we have
the flea market has 197 spaces, there were
very few empty.
Thursday afternoon we had some really interesting programs,
Kirk Cline lead the first of what we plan to be an
annual Tube Collector's forum.
Dennis Osbourn, told us what an interesting
and useful piece of test equipment the RCA/Riders
Channalyst is.
Jim Bernard brought an entire collection of Zenith
transistor radios and told us all about their history.
Paul Farmer lead a panel discussion on the
philosophy of Restoration Vs Preservation.

Thursday evening, 33 of us took over most
of the Open Kitchen Italian restaurant, something
that has become a regular part of the conference.

Friday morning we were greeted by some absolutely
fabulous weather, blue sky and high that day of 77.
I saw lots of goodies being carried past the
registration tent on the way to the new owners
cars.
The Friday afternoon auction was filled with goodies,
and was followed by our annual banquet.

Saturday morning I got started a little early
with a on the air chat about the conference and
Saturday's up coming Radio Rescue with Don Russell the morning man on WBT
AM.
It must have worked because I talked to at least a
dozen folks that heard it and came to see what
was going on, three of them brought radios for
Radio Rescue, all of which found new owners.
The Radio Rescue auction also includes items
from conference attendees. A good number of the items
were donated to help raise money for the club.

The conference was wrapped up this afternoon
with our annual Saturday luncheon.

This year, 2004 is 25 years since the Charlotte
group hosted our first AWA Southeast meet
in 1979, and 10 years continuously at the Sheraton hotel.

Many thanks to all the folks that attended and
all the really special ones that worked so hard
to help make it happen.

ISTR that as a Novice, I could do some of that, and some of my fellow Novice
ops bragged about it too. Once they upgraded from a Heath AR-3 to SX-99, maybe
their skill got rusty :-)

Of course most of us can copy "air phone" at a crowded party, picking a
friend's converstaion out of equally loud voices in the room. Not that it's
easy, but it works.

It's a pretty well known story (maybe even true) that the Brits knew the German air raid was coming to Coventry (by breaking the code and/or watching the bombers on radar), several hours in advance, but deliberately did not warn any civil defense or firefighters in Coventry, for fear of tipping the Krauts that we were reading their mail.

So apparently Churchill was willing to sacrifce Brit lives, and not jsut US sailors, to hide the code breaking. --Mike K.

Thats the difference in looking at the fact after versus before the
occurrence.
One of the techniques used by both sides was to send literally hundreds
of fake messages along with the 'good' one. This kept the decoding gals
busy and still left some doubt about which one(s) were the real messages.
If they had copied mail that included every city in Britain as a
target...and later one in particular got bombed...its quite easy to say
that they knew ahead of time and here's the evidence to prove it.

I've read Churchill wanted as much American involvement as possible,
particularly after Dunkirk. He was dealing with Roosevelt through Sir
William Stephenson. Churchill and Stephenson decided to risk sharing their
best intelligence information in order to show Roosevelt that the Great
Britian still had a chance. Without the shared intelligence, the deal for
the old destroyers and other arms almost certainly would never have gone
through.

You're right. The codes couldn't have been timely enough to locate the subs. Radio location could, but the destroyers and bombers would almost be too late to find anything. The value was, I suppose, more stratigic than tactical (as they say on cable TV)

>

The story is that Roosevelt knew. I can't be sure the story is absolutely true, but it seems credible. I doubt the exact location of the German subs could have been determined in a useful way until aircraft had good radar.

>
> (5) As you can imagine - the Americans were livid when finally told. Not
so

I don't think Roosevelt was played by Churchill. They were pretty much in agreement about defending England, and defeating Hitler.

>
> (6) This and the massive defeat ("Heroic Retreat" as the Brits tell it) at

It would have also have been tougher to maintin a "Hitler First" program in the US, if the Allies were headed up by a Brit.

>

It's my understanding that the code breaking was most useful in the air war of the Battle of Britain.

I own an HRO-7 I am restoring. However, someone replaced the gray dial and knob with the much darker dial and knob from other versions. So I need to buy a replacement dial and knob and/or trade mine.

Thanks, Colin K7FM

Outgoing mail is certified Virus Free.

I have been reminded that I left out a couple
of feature events on my "conference wrap-up".
That's what I get for trying to write something
when the rest of me wants to go to sleep.

Thursday evening after the find dinner at the
Open Kitchen, we were treated to a great presentation
on Zenith history by Dr. Harold Cones. If you don't
already own his books on Zenith, I highly recommend them.
A very interesting topic and a great speaker,
I'll bet his collage students really look forward
to his classes.

On Saturday morning Gary Carter WA4IAM,
hosted the first Vintage Amateur Radio Forum.
I understand about 10 attended and had a
great time. This is planned to be an annual event.

Many thanks to these 2 gentlemen and everyone
that helped with the programs and forums this year.

Also, I have updated the CC-AWA event page,
http://cc_awa.homestead.com/schedule.html
Check it out when you get time.

I have a transmitter that I want to trade for a receiver. It needs a low voltage transformer. I'm in northeast GA. The transmitter is for pickup only. I want to trade for a good Amateur radio receiver with a good S-meter. HQ 110 or HQ 170. The transmitter is in fare shape. I have the manual and a can of gary paint to repaint the case.Send me a email. Thanks for reading and 73

It may be "a pretty well known story", but it may also be an urban
legend". There are indications each way, and I seem to recall having
seen it exposed as an urban legend.

It is an urban legend. RV Jones explained that a mistake was made in the
measurement of the modulation frequency on the beams (1500 c/s instead
of 2000 c/s IIRC). So that the modulation frequency on the jammers was
set incorrectly. The airborne equipment used very sharp filters so that
the jammers were not audible. So Coventry was bombed.

2159. 2004 Annual Over-Used Ebay Term Count

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-03-29 14:58:12 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <406838D6.6000803@ix.netcom.com>
Source record: 24520
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

It's time once again for our annual count
of the descriptive words
made meaningless by overuse and abuse in Ebay titles.

Term Last Year This Year

Vintage: 228227 421013
Rare: 182368 282727
Deco: 15501 222190
Mint: 144747 211060
Antique: 45956 89050
L@@k: 52905 82961
Special: 26215 33943
Collectable: (new) 32868
Unique: 19527 31024
Retro: (new) 30350

Sadly, we can no longer keep track of the
amusing over-use of exclaimation points
(Rare! Rare!! R-A-R-E!!!!!!!!!!!!)
as Ebay's search engine no longer counts them.

Among radio listings, "vintage" is still the champ
with 2335 listings.
"Mint" has yielded third place to "Deco,"
which has come out of the bush leagues
to rocket up the chart.
The new buzzword, "retro," is one to watch.

Regards,
Dave S.

Hello everybody,

I've updated the list of the Drake R7A raffle. You'll find it at
http://home.online.no/~sindtorp/raffleDraker7a.htm

118 of maximum 150 tickets have been sold so far, so you still have the
chance to get yours. But only 32 more tickets will be sold!!

I've also updated the program for the Drake Forum!!

Thanks for your support!

Yeah, and what about "Eames", or "Eames era"? All those $10 '50s (oops,
make that "Mid-Century Classic") clock radios would go in the trash without
that special additive.

>
>What is glossed over is that the front line German Radio OPs were somewhat
>lazy and seldom if ever changed the code wheels on the machine. The German
>high command believed their code machine unbreakable but even so still
>changed the code wheels on a weekly basis for high level comms.

Any decent book on code-breaking will relate this point. I've never
known it being 'glossed-over'. Most of the breaking depended on
mistakes, or duplication, or repeats of messages without changing the
wheel positions.

The Luftwaffe was very lax on this point, using the same start position
for several messages.

>
>They believed even if front line comms could be broken - they were of little

The code was changed by the Kreigsmarine daily, sometimes every three
hours.
>
>(3) America at the time was isolationist. The Brits saw what a single Jap
>Attack at Pearl Harbor had done. Almost overnight, America was at war - with
>Japan. Most Americans wanted to fight the Japs only - they had no beef with
>Germany.
>
>(4) The Lend-Lease convoys were US Merchant Ships carrying U.S. War Material
>protected by the U.S. Navy Ships manned by US Sailors.

Err... Some were. The US government's policy was even-handed. Pay for it
and collect it. Most convoy ships were European at the start. Only
later, after 11th Dec 41, and when the US started building Liberty ships
in huge quantities, did the ratio change.
The US and Canadian Navy escorted the convoys eastwards to about
half-way when they handed over to the RN.
Before 11th Dec '41 the USN provided some escort vessels, ie 'Reuben
James', which on occassion did engage the U-boats.

>The Brits knew the
>exact locations of German subs out to sink the convoys but kept quiet.

Rubbish. We wouldn't have lost a single ship if that was so. I can
remember the 9.00 BBC news, each evening, starting "The Admiralty
regrets to announce the loss of the following ships...." then followed a
list of from 2 to 20 ships. It was harrowing.

>The
>loss of some shipping and American lives would keep the United States
>focused and involved with the war in Europe.

Bollox.
>
>(5) As you can imagine - the Americans were livid when finally told. Not so
>much for the loss of American life but for the fact they were so well played
>by Churchill.

If only.
>
>(6) This and the massive defeat ("Heroic Retreat" as the Brits tell it) at

>Dunkirk were probably the two major factors in selecting an American as
>Supreme Allied Commander.

Our 'Heroic Defeat' matches your Philipines, I suppose. The RAF lost
200+ fighters defending Dunkirk.

Eisenhower for the invasion and afterwards. Which involved at least 60%
Brit and Commonwealth troops on the first day.
>
>
>Of course all this is just idle speculation...

You should have put that in capitals , and underlined it.
>
>I think the code breaking used in the anti-sub effort came much later when
>it was certain America would join the British War effort.

Do you think we wouldn't have done it to save our own ships?
>
>But we may never really know. -B

We know a lot more than you have written.

2176. Omni Antenna Help please?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-03-29 22:30:35 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <LC1ac.10075$R37.8617@read1.cgocable.net>
Source record: 24537

Hi

I was given a Omni antenna from a ham who claims the best thing since sliced cheese. I want to use it for receive at first and when licenses come in for transmit. I would like to transmit on as many frequencies as practical and possible as I have a good tuner.
This is an omni, aluminum, telescopic and it 19 feet long. It has 4 ground planes about 8 feet long.
As I was cleaning it up, I noticed a coil at the base of the antenna connecting ground to center. Right at the female connector within the base of the antenna. There is a coil that has approx 20 windings and connects to ground. The center also feeds to the piping that stretches the full 19 feet. The coil is pretty rough shape.
My question is in regards to this coil. Is it necessary? What function will it serve? I can rebuild it if need be but is that necessary? And is 19 feet a good length for utilizing as many useable frequencies as possible?
Any advice?
Thanks
Bob

David,
Thanks. I found this interesting. As "search terms" any of those words would give overwhelming results, for sure. As descriptive add ons, I guess they have a place.
For radios, I suppose a purist would say there is no such thing as an antique radio (over 100 years old), but that dead horse was beaten many threads back.

I just did some quick ebay searches:
"collectable": 9,528 items available now
"collectible": 15,741 items available now

I did manage to find:
-- one "collectible unique rare deco" item. A "must have"!
-- 89 "vintage rare deco" pieces, including a cool radio poster, a microphone, an RCA radio, a Zenith radio
-- "piece crap" yielded a paltry 2 items
-- 389 antique radios or related
-- 588 unique antiques

This is fun! Thanks for the inspiration.

Jim (one of them)

First you need to find out what model it is.
http://www.antennaproducts.com/omnilpaindex.htm
might help.
or http://www.drbott.com/prod/db.lasso?code=9141-QUSO
http://www.wavehunter.com/hfant1.htm

if i gather correctly what you are saying those are loading coils for the
bands it's good for. YES you need them. If none of these websites help
just do a google search for an hf omni antenna

Good evening to all on the list,
I just acquired a PM 23 spkr (the style with the h) and am in the process of restoring it. Several questions--the grill cloth under the grill is creme colored. Is that the original color? Also the transformer looks like it could be a substitution.
What is the impedance of the spkr itself (without the xfmr) and how can I tell the input impedance of this mystery xfmr? When hooked to my SX 28A, the 5K terminals had more clarity in the sound than the 500 ohm terminals (which sounded more bassy). Just for the heck of it I measured the input resistance and got 470 ohms.
Thanks for the help ahead of time, 73 Mike KF6KXG

The horse is coming back to life.

I was just researching early radio for my own reasons:

Here are some contenders for the "1st Wireless Transmission"

1892 Willion Preece
1894 Oliver Lodge
1895 Marconi
1901 Marconi - Transoceanic

1904 is the cut off for some folks idea of "antique". It's not
mine. I believe that my SX-101A is an antique and I don't care what
furniture people think or say. Furniture folk do not own the
English language or the legal system. They definitely do not have
the final say.

At best all they can do is state, "in some circles, by convention, a
piece of furniture is not considered an antique until it is 100
years old." They should add, "This has no legal standing or
general agreement, although some folk might like to imagine it
does."

By 1916 there seems to have been commercial radio broadcasts with
news and music and thousands of avid listeners.

One surprise for me was discovering that the transcontinental
railroad was completed in 1869 trailing Western Union's
transcontinental wire telegraph which was in 1861. The Pony Express
started in 1860 so it probably lasted about 1 year.

Resistance and Impedance are two different animals. The ohmmeter only shows you DC resistance....it tells you nothing of the impedance. You need to go back to electronic school.

Just go with whatever connection sounds the best and produces the loudest output out of the speaker.

The impedance of the raw speaker is most likely 8-ohms.

There was no call for you to make that snotty remark. The OP's usage of
terms impedance, and resistance were correct, and appropriate. His
measurement of the DC resistance was also an appropriate thing to do.

For one thing, it tells him that the impedance of the transformer must
be greater, much greater than the 470 ohms he measured. 5K would be
about right.

Hi,

The purpose of the coil is the following:

1) to shunt electrostatic buildup to ground, thus protecting your
receiver.
2) to provide an impedance match from 50 ohms to the very high impedance
of an electrically short whip.
3) to make the whip appear to be electrically longer than it really is.

The coil you have is pretty robust, and looks pretty good to me. I
would clean out the cobwebs, and try it out.

Oh, receivers don't much care what you use for an antenna. A long wire
strung through the air works just fine. Directivity is useful in
extreme conditions.

Thank you Chuck for your comments.

I will do exactly as you suggested and clean up the existing coil and re-use it. I suspect that coil is there from the original engineering of the omni that included those three traps.

What would you do about those three traps? I suspect should I put them in the air, a good wind storm would blow them down as they are very heavy. The previous owner had replaced those three traps with a straight whip and suggested good results. I plan to use the same whip (no traps) and tune it. Any pros or cons in this strategy? Is this the best I can do with what I have? Preferably I would prefer to do this as I know it is windy where I am and do not want to keep climbing but would also like to maximize my transmission performance and receive performance.
Thanks again for any thoughts...

GIYF: from http://hereford.ampr.org/millist/m24.html

TH-5/TG
"Telegraph terminal, Frequency-shift keying, Used with standard tetetype machines, Vacuum tube based, Mark 1325 Hz, Space 1225 Hz, 20 Ma loop, Maximum speed 100 WPM (75 Baud), 115 VAC, 50-60 Hz, 65 W, Worked with 4-wire (full duplex) or 2-wire (half duplex) circuits, 15 Lbs, TM 11-5805-246-10. "

In other words, it's a modem, with non-standard tones and 100 Hz shift, probably intended for use on radio as well as landlines. The 20 Ma current loop is low for older Teletypes, which (IIRC) usually use 60 Ma loops connected directly to the selector magnets, but it's useable for the Model 32/33 machines, which have built-in driver transistors to amplify the loop current. Since the maximum speed is listed at "100 WPM (75 Baud)", it was used for older (Model 15 or 28) machines, where 100 WPM is possible with a 75 Baud transmission rate.

To use it with a computer, you'd need an RS-232/Current loop convertor: they were common in the early (PDP-8) days of computers, since Model 33's were the least-cost terminal available at the time. Of course, the Model 15/28/32 machines would require a custom driver to convert Baudot to ASCII.

If you only have one of them, I suggest a museum: I don't think the current crop of units available to Ham operators will work at 100 Hz shift, but I don't know for sure. With a pair, you could construct a low-speed link.

HTH.

[snipped rest]

Bob,

Any multiband antenna is a compromise between radiation efficiency, cost, wind loading, and weight. In other words, the designer of your vertical will have already accounted for the wind loading that the traps represent, and unless you're in an extremely heavy wind area, or are prone to frequent ice storms followed by high winds, the traps shouldn't be a problem.

If you remove them, then the antenna will be capacitive at all frequencies below resonance. That means you'll need to add inductance to get it to resonate: you may have a good tuner, but unless it's located at the antenna, you'll suffer a lot of RF loss in the feedline (I assume you're using coax) and might even "punch through" the insulation if you're running high power.

I recommend you keep the antenna as-is, and mount it with the traps intact: they're designed to offer a good compromise impedance on the ham bands, and you probably won't need the tuner with them in the line. That means much faster band shifting if you're a contester, and less worry about your finals in any case. If it can't take the wind load, it shouldn't be up there, and you'll have an answer to that question fairly quickly.

If the effort or cost of putting it up is on the wrong end of your risk/reward curve, then I suggest you use the tower to support a random-wire or tuned-feeder dipole, and put your tuner to use.

FWIW. YMMV.

What's with the 11m comeback? He didn't confuse the two. He merely supplied
the DC resistance as additional data (which we all end up asking for
otherwise). --Mike K.

Hi Bob,

You really need to put the antenna back the way it was originally.

If you remove the traps, you will have a very short vertical whip
antenna, and your tuner will have to do alot to match it. Your tuner's
only job is to make an ugly load look nice to your transmitter. It
does nothing to improve the way the antenna looks to the transmission
line. The traps and tuning coil, on the otherhand, fix the ugly load
problem right at the antenna. They give your tuner and coax a break.

Coax, and connectors get really unhappy when you run high VSWR loads
at any kind of power. At the voltage peaks, the voltage can reach
thousands of volts in a bad mismatch condition.... BUZZZAP!...

Get yourself a copy of ARRL's Antenna book. It will better explain
what is going on with your vertical. Once you understand how the
antenna is supposed to work you can start to think about modifications.

Actually, in many circles, antique means specifically "made
before the beginning of the industrial revolution", not a specific
number of years old.

I have the Yaesu Twins (FL-101 & FR-101). The receiver is still in fantastic shape (I added the CW filter a few years ago which makes it even better!).

However, there's smomething seriously wrong with the transmitter. I have used it for CW, and made quite a few contacts, but only a few watts of power is leaving the radio. On SSB, I'm told it sounds like there's a huge RF leak on my signal. I checked the tubes and they are all at 85% or better.

I'm not one to really be able to put a radio on the bench and troubleshoot the problem, so I though I'd have a professional fix it, but who? I called Yaesu, and maybe it was the individual I got that day, but they weren't full of any good suggestions because the radio was "out of warranty" (no kidding!). I live in Florida, if that helps in deciding a place to work on it.

73,
KG4KLR

Frank,
Its a Japanese site. If you are set for English only in your Google
preferences it may not have come up.
Here's the link...lots of good UTC specs.
http://www.anc-tv.ne.jp/~suzuki3/excel_UTC.htm

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Conar Model 500 Receiver.....$100 plus shipping
A very clean,working Conar 500 receiver with photocopy of manual
http://members.cox.net/radiostuff9/conar_rcvr.jpg
http://members.cox.net/radiostuff9/conar_rcvr2.jpg
http://members.cox.net/radiostuff9/conar_rcvr3.jpg
http://members.cox.net/radiostuff9/conar_rcvr4.jpg

Electrovoice Model 623 Microphone - New in box.....$135 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$35 plus shipping
Nice working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$40 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5, 15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$25 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Knight Kit Audio Amplifier.....$30 plus shipping
Knight Kit amplifier from Allied Radio. No model number on the unit. I believe this unit is from the late 1950's or early 1960's. I have checked it out and it works. I had the matching tuner for this a year ago and it too did not have a model number.
http://members.cox.net/radiostuff9/knight_amp.jpg
http://members.cox.net/radiostuff9/knight_amp2.jpg

McMurdo Silver Model 900 VOMAX VTVMwith RF probe...$25 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

Hello,

I am in the process of restoring an old S-120 which needed a new potentiometer. I have replaced the part w/a new one (same type) and at this moment, when I turn the radio on, I hear nothing but cracking sounds from one of the resistors nearby.

I am thinking of installing a condenser (sp?) which should hold the charges from the resistors.

Any idea if this should work, or am I lost out in this?

Thanks,
Bruno Hache
(1st year Electronics Student)

Resistors aren't supposed to make crackling sounds - ever. If it is
getting hot and burning then something downstream may be shorted and
drawing excessive current thru it.

-BM

Why do you think it's one of the resistors? If the resistor is arcing internally, it's best to replace it.

Crackling noises on these radios are commonly caused by arcing across the internal mica capacitors in the IF transformers. Robert Casey has a good article on this:

http://www.geocities.com/CapeCanaveral/9178/radios/repair.htm#if

Have you replace all the paper capacitors? Paper capacitors age poorly, and also can arc internally. All of the capacitor in a waxy cardboard tube and most of the capacitors in a molded plastic cylinder are paper. The only plastic cylinder capacitors of this era I trust are the C-D Black Cats, which are mylar dielectric.

Frank,

I haven't replaced the paper capacitors yet. I'll give it a try. I don't suspect it'll hurt the unit at all.

Thanks,
Bruno Hache

First, did the radio WORK before you changed the pot????

If it was working, then the first thing you should look for is
something like solder blobs causing shorts, bare wires
touching where they shouldn't, etc.

Pete

Your crackling resistor may be a capacitor. Specifically, an Sprague Black Beauty. These had bands and looked something like power resistors. They were often used for line bypasses.

2232. NEW PROGRAM - Input Impedance & SWR of resonant antennas

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-01 00:23:05 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <c4fnd9nfa1@titan.btinternet.com>
Source record: 24493

Program models a 1/4-wave vertical and 1/2-wave dipole antenna to
demonstrate how input impedance and SWR behave in the vicinity of resonance.

Transmission line Zo can be varied to match the resonant antenna. Frequency
can then be varied to observe how SWR varies over the band.

Download program R_X_SWR in a few seconds and run immediately.

No increase in price.

I got mine from Battery Outlet in Hampton, VA, since they are a five-minute drive from my office. Any good battery supplier should have them in stock. Just take the old one in and ask them to match it.

Hi Keith,

I didn't like the idea of exposing my cpu card to another
leaky nicad, so using a couple of wires, I mounted a pair
of AA cells off board. The AA cells hold the memory longer
than the original battery, and the trickle charge is more
in line with what a AA cell can safely handle.

SWAP ONLY. Looking to find a home for a Johnson Kilowatt Matchbox. Am interested in vintage 1950s/60s transceivers or transmitters. No Heathkits, please. This Matchbox is in good condition however its previous owner installed two meters to measure Forward and Reflected power simultaneously. He did a decent job of installation and the meters are quality Lenkurt professional meter movements. The Matchbox has been in nightly use. No directional coupler is included. Original manual is included. I will be happy to email you pictures of the Matchbox.

Here's some general advice, in no particular order.

A. Assuming you're testing into a dummy load:

*. Test the dummy load with a noise bridge. It should show very little
reactance at any frequency it's rated for.
*. Test the dummy load by loading up a different transmitter.
*. Perform the OTA tests, below.

B. If you're testing OTA:

*. Check the antenna, its feed, and the tuner if present. Flex the feedline
and all connectors and listen for received noise. Be sure all connections
are solid.
*. Use a noise bridge to determine the antenna's resonant frequency, and
perform the test at that frequency.
*. Check the resistors in the parasitic suppressors on the final tubes. If
they're burnt, replace them and neutralize the finals at the _HIGHEST_
frequency you'll operate on.
*. Inspect the finals with a magnifying glass: look for shorts, see if the
plate is tilted over, etc.
*. Check screen bypass caps.

That's all I can think of before my second cup of coffee.

YMMV. If it breaks, you get to keep both pieces and I'm not responsible.

Bill

From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <oljbc.4063$sd5.565@okepread02>
Source record: 24421

I have for sale two Vibroplex Standard Bugs. One is in good condition and
the other needs some repair. They are both 1960's vintage, I believe.
Serial Numbers are 19XXXX and 22XXXX. They have the 833 Broadway, New York
labels. They both have grey colored bases. The first key
is in good working order. There is some light pitting in the chrome parts,
but not bad. The base is in great shape. Price is $65.
The other key has a broken Lever Bar Spring and a bent Trunion Pin. It is
complete with two weights. It would make a good
Parts key or could be restored with new parts from Vibroplex. Price is $35.
Thanks, Charlie Hugg, K5MBX

Hi, Keith -

The Varta batteries for the RA6790/GM are available at www.mouser.com
Mouser part number 672-55615702
Price $6.10

This is a Nickel Metal Hydride cell.
I don't know if it will have less of a leak risk
than the original Ni-Cad used by Racal.

73,
Ed Knobloch

Hi Ed,

I cannot recommend this at all!

NiMH cells don't like being trickle charged. If you want to
charge them at a "trickle" charge rate you need to use a smart
charger that will cut off the current after they have reached
full charge.

Hi, Chuck -
Yes, I agree that one must be careful about using a NiCad charger
with a NiMH battery, the NiMH can be in danger of overcharging.

In the Racal receiver memory protect circuit,
there is a silicon diode in series with a 270 Ohm resistor
from the 5V supply to the 2.4V battery, which means about 7 mA
trickle charge rate. I looked at the Varta site, for a 110 mA-H
button cell (2/3 capacity of the 150 mA-H Racal battery suggestion),
they say either 11 mA continuous trickle or 22mA for 1 year
would be overcharging. So, there should be no problem in the Racal.

73,
Ed Knobloch

> 73,
> Ed Knobloch

Hi Ed,

There is alot of pressure on the NiMH battery makers to pretend the
NiMH cells are direct replacements for NiCD cells. If you are willing
to accept drastically shortened cell life (compared to NiCD), they are.

What I have found to happen (during my research phase for a series of
rapid chargers I designed for the US Army) is NiMH cells, once they
achieve full charge, will outgas if continued on even a 1/20th C
charge rate. Pressure builds, and the safety valve spits... Soon,
the cell is bone dry, and has no capacity. I found that you could keep
the cells on a 1/100th C rate indefinitely, and it did a good job of
keeping the cells from self discharging... well new cells anyway.

So, a good compromise for a trickle charger is to charge at 1/10th C
for 14 hours, and switch over to 1/100th C. The Racal cannot do this.

2272. About Teletron LWF45

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-03 17:32:47 UTC
From: Joaquin <espectral@ya.com>
Message-ID: <c4msfm$r6j$1@news.ya.com>
Source record: 24433

Hello from Spain:

I would like some diagram for this receiver (Teletron LWF45). I have one.
The receiver is OK in the 80-160 Khz band, but has problems in the 40-80 Khz
Band.

I can swap for anothers diagrams.

Thanks in advance.

Joaquin.

2273. Voltage Regulator Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-03 17:49:31 UTC
From: Lou <FFSTA17NO@SPAMACCESS995.COM>
Message-ID: <9PCbc.322$Fo.11010@dfw-read.news.verio.net>
Source record: 24434

Some time ago, there was a discussion in here or another closely related room of a part - UA78HG - voltage regulator - 4 pins. I had saved all information from that chat but recently my computer had crashed and I have lost those notes.

This part is nearly impossible to find in the US from what I can recall... But it seems to me, someone perhaps from the UK suggested they carry all you want of them - over there.

Can anyone recall or add to this? I am in need of at least one of these. I may elect to buy a couple spares.

In lieu of finding this part, I'm wondering if anyone may have done some designing to circumvent using this part, achieving the same results? I'd be happy to hear from you. In particular, I've got 3 NRI/CONAR 320 Power Supplies. Two of them work, one does not. While I can keep it for parts, I'd like to maybe get it working or use it for the "prototype" to get it working using other parts to achieve the same results. I kind of like the variable voltage and current rating of this supply. I use the two I have "working" very often. Aside from the unit that does not work, I'd like to know what I can look forward to, for when one of these other units may stop working - other than trashing them.

Feel free to reply herein or direct.

Thanks.

Lou

This stuff is sitting in my garage in Loveland CO.

Best offer >= 0 takes.

You agree to pick up or pay for packaging & shipping.

The BC312 looks pretty original but does not have a
nameplate.

The RA-1B looks completely original.

The scope TS-34A looks good. I'm afraid to plug it in,
should probably be brought up slowly.

Otherwise, out it goes.

There are several old ARRL handbooks, too, that have seen some
use.

Regards, Bill Hale K0QA

For Sale..........

External Matching Speaker for the Knight R-100 Receiver.....$60
plus shipping
Cosmetically excellent with no dings or scratches. Only flaw is a
headphone jack that has been mounted on the side. Does not have a logo.
I have seen them with and without.

G'day G'day

I am the owner of a Yaesu FT-ONE HF Transceiver, and I wish to perform a complete alignment on it. To do this an extender kit is required. I am wondering if anyone has a set of extender boards they would like to sell. The board in question are:

a.. 14P Single Face extender board P/N D3100002
b.. 18P Double Faced extender board P/N D3100010
c.. 22P Double Faced extender board P/N D3100009
d.. 18Px2 Double Face extender board P/N D3100011
e.. Extender cable P/N T9204357
Alternatively does anyone know of a website, or any articles on homebrewing a set.

Many Thanks in advance

Tony VK2TS

Anytime Tom.....I went through the same thing a couple
of years ago. I bought the 8444, and discovered that it had a different I.F.
output frequency than what was required for the 8558. The service manual for
the 8444 should still be available as a download from the Army manuals
website (DOD? I can't remember).
Since I bought an 853 mainframe, I would be willing to sell my 182T
mainframe for a good price. Let me know if you need anything like that.

Arcturus made a lot of tubes with blue glass. There were some other smaller makers also. No real significance (marketing gimmick?) but collectors like them because they are somewhat interesting.

I have for sale a nice Hallicrafters SX-117 Receiver. It does work, but seems to need an alignment. Sensitivity seems low.
It is complete and original. Cosmetically, it is nice. A few small scratches in the paint of the cabinet. Face plate is great.
Chassis could use some cleaning.
Comes with origial manual. This is a Ham Band receiver, but has several optional positions on the Band Switch to add Crystals for 500 Mhz segments of Shortwave Bands.
Price is $175 plus shipping from 79602. Digital pictures available. Thanks,
Charlie Hugg

Looking for a SX-42. Appearance not all that important, just so it works.
Thanks. Charles

2301. Looking for a specific B&W/Johnson 80 meter plug in coil

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-06 03:11:20 UTC
From: Mark@The.KB
Message-ID: <4c7470dj5b2a1et5icqp37p7frvin6un6o@4ax.com>
Source record: 24362

I have a friend without newsgroup access who's looking
for a specific plug-in coil that was made by both Johnson and B&W
under different part numbers:

Johnson 10000CS80
B&W 80HDVL

He says this is a fairly large coil that will probably have 12 to 14
turns. The jackbar on the bottom has two large banana-style
plugs almost a quarter inch in diameter, spaced about 7 1/2"
apart.

Can anybody help him out on where to find either or
both parts?

Thanx!

--Mark

Let's have a show of hands: how many boatanchor hams would like to see the BAMA site go to Bittorrent?

The BAMA site and the mirrors are overloaded, and I think Bittorrent would solve the problem: it's a file-sharing system that uses its users' computers to distribute the data. A cable modem or DSL is, of course, assumed.

Here are details of how it works:

http://bitconjurer.org/BitTorrent/ (Be careful to use this link: the "bittorent" site is a ripoff)

And, we all know where the BAMA site is: http://bama.sbc.edu/.

What do you need that you can't find out?

With an ohmmeter you should be able to find out which wires make each winding, and where the center taps are. It won't tell you which is primary and which is secondary, though, but it puts you on the right track.

Take a 6V filament transformer and connect it to one winding. Apply 6VAC. Measure the voltage across that winding, then the voltage across the other winding, and you now know the unloaded transformer ratio.

Now you'll know which is the primary and which is the secondary as well, from the ratio. Apply a 1 KC square wave to the primary (which you can get from the calibrator on a Tek scope), then look at the secondary on a scope. Hang a variable resistor off the secondary and crank it down until the output looks as square as possible. Now measure the resistance of the pot and you'll know the optimal load impedance of the transformer.

What else do you need?

Scott,
Many thanks for the reply. I need the rating (how may watts) and impeadances from it to see if it'll work as a replacement for the Globe King 400B I blew the modulation transformer in. Unfortunately someone installed a substandard mod tranny and the secondaries shorted out. I need something to handle the load impeadances from a pair of 5514's to V70D's with at least 218 watts.

Any information will be appreciated.

As I understand Bittorrent, it tries to speed up file transfer times by dividing files up into small chunks, and downloading different chunks to the various computers requesting the file(s), with instructions to share the chunks with each other. A dialup connection is just a thinner pipe, and dialup could participate along with everyone else. The big deal with the system is that you get credit for sharing, and you get to set the upload speed to a reasonable number.

In other words, you can download one, or more than one, and share it while you're online. A DSL or Cable connection is required only for the node(s) that contain the file information: I should have said "A cable modem or DSL is, of course, assumed for prime nodes, since they must be on all the time, but dialup users can participate too".

> Anywa, I likethe idea of a central location, versus a Napster-like
distributed
> sharing system. --Mike K. AA1UK

It's not a binary choice: the BAMA site and its mirrors can stay in service, with Bittorrent providing faster downloads for those who choose to use it. Since (if I understand the system correctly) Bittorrent files are shared only amoung computers which request them from the source node(s), I'm asking if there are enough hams interested in trying it out to make it viable for BAMA files.

If there are Bittorrent SME's on here, speak up: I probably got some of the details wrong.

Negative. It's a peer-to-peer potential security issue among other things, and we can well be patient enough to d/l from the site or the mirror as available, and without having to get matched up with buddies to get the info.

But a very good thing to do for easing up the load a great deal, would be to dump horrid Acrobat & convert all those huge .pdf's into .djvu or into anything less of a PITA than Acrobat size-wise. Huge .pdf's often drop data, too, making long d/l's sometimes extra frustrating, particularly on dialups. Even all .jpgs would be far smaller. As for .djvu, it seems to be about half the size of .pdf's, and the free reader is less cluttered & clunky to boot. I would think this would also save a lot of expensive server real estate.

How U been Joe? Here's the goods on your iron (beats posting BS,
no?):

Designed for typical mod toobs 203A's, 805's, 75TL's, 203Z's.

Pri Z 9,000/6,700 CT 350ma

Sec Z 8,000/6,000/4,000 350ma

Rated 250-350 watts (assume this is the Class B audio load), 26 lbs.

Do you have an old Triad catalogue, Joe? We need one worse than a
dead man needs a coffin.

I am still looking for a MIL power iron nbr that makes no sense (not a
civilian catalogue number).

One of these daze I'm still gonna try you on my flea rig. :-)

2330. Best Day for Dayton Hamvention?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-07 14:06:18 UTC
From: macve3gro@aol.com
Message-ID: <20040407100618.03687.00000885@mb-m01.aol.com>
Source record: 24391

Greetings!

If you only have one day, what's the best day to attend the Dayton Hamvention--especially if you are interested in boatanchors and boatanchor-related stuff? Two years ago I went on Friday, but the fleamarket seemed a bit thin compared to fleamarkets other years--but then, as I recall, the weather was rather poor. Last year VE3AUI and I went on Saturday, but a lot of people seemed to have left and gone home early by the time we arrived--late because of a tire blowout outside of Toledo. Those who habitually attend the whole weekend must know. Given reasonable weather, what is the best single day to attend the Dayton Hamvention?

Thanks for reading. All thoughts on this matter much appreciated. 73.

Harry, VE3GRO
London, Ontario

With respect, I disagree: Bittorrent is a proven application, using dedicated ports, and users can run it on either Linux or MS, whichever they're more comfortable with. I don't feel it's any added risk: it's open source, is patched quickly, and has a good user base. The bandwidth savings, IMNSHO, justify the effort.

YMMV.

2337. Need "Original" (1937 era) 6U5 Tuning Eye Tube

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-07 21:21:17 UTC
From: mdcalvert@aol.comkillspam
Message-ID: <20040407172117.18671.00000956@mb-m07.aol.com>
Source record: 24248

My Westinghouse Model WR-272 (circa 1937) requires an "orignal" design 6U5 tube for the Tuning Indicator. The "original" design featured a glass bulb that was shorter than the dimensions listed for the 6U5 in all of the online tube manuals (RCA and Sylvania from 1943 on). In fact, the radio chassis is designed so that the tube's maximum seated length (measured from bottom of base to top of glass tube) can be no longer than 3 inches. The tube socket is loose and connects to the tube base and the tube and socket can be adjusted back and forth, in and out, from the hole in the backside of the tuning face of the radio. Interestingly, the adjustment appears to accommodate tubes that are as short as two inches.
I have purchased and returned a "modern" Sylvania 6U5 because it would not fit into the space in the radio -- no matter what I tried. I have also called several of the onlione tube merchants and the ones who have a 6U5 (or any of the common substitue tubes) report that the base-to-top measurement is typically 3 1/4 to 3 1/2 inches -- way too long for my radio.
Any help in locating an original, short version of the 6U5 (or substitute) would be sincerely appreciated.

Hi.
You might want to try this question on rec.antiques.radio+phono. I
personally haven't ever seen a short 6U5 and I'm struggling to visualize
your situation. Nearly always they are simply clamped into place and
the clamp could fall on the glass envelope as easily as the base...with
some buffer material between the tube and clamp, of course.
There are also the ST 'bottle' shaped tubes that sometimes won't fit but
the more common version is the straight sided tube that has the same
diameter from top to bottom.

HTH,

Bill

Someone may have said so already, but historically the correct VFO is the VF-1.
I built a VF-1 a year after I built my DX-40 in 1960 (when the "N" got dropped
out of KN3JVK). I long ago sold off the gear, but ISTR the VF-1 plugs into a
socket on the rear of the DX-40 to leech power.

And the VF-1's little window green dial is COOL, especially in the dark.

Source record: 24258

This is a very interesting Communications reference book from WW-II.
It was the intelligence bible of the period. Over 600 pages covering
telegraph, radio, telephony, teletype, power, etc. About 160 pages
are devoted to Radio and there is a lot of information on the neat
WW-II MIL radioequipment that is so popular today. There is an
interesting chapter on "Foreign" telephone systems and how to
interface it with Army equipment. The book is in good condition but
has some inkspots on the edge and some minor waterspotting on ten
cover. The spine has been reinforced with clear special library tape.
This was well done and the tape is still clear and flexible.

I am asking $150.00 or best offer for this rare item plus shipping
costs. I have only seen one other in the many years I have been
collecting this stuff. Several years ago I swapped a copy for a
R-390A metal cabinet......

If interested please reply by e-mail.

Gentlemen,
I own this beautiful JRC NRD 1EL in pretty nice conditions but performing poorly: it is something in between a R390A and a 51S1, with a few band-pass filters added; unfortunately the manual I have is in Japanese so only the electric diagram is understandable. Inquiries to several dozens of manual traders for a version in English brought no result. I am not intentioned to learn Japanese just for the purpose nor do I have the time, so any help to find a Manual in English would be greatly appreciated. Thanks to everybody!

2354. Hickok I-177-A and Munston MX-949 A/U Adapter - 9 pin tube readings

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-09 22:03:48 UTC
From: ether@x-mail.net
Message-ID: <c9d2eb15.0404091403.59593012@posting.google.com>
Source record: 24265

Hello All:

I have an I-177-A tube tester and a Munston MX-949 A/U adapter, which has a more modern 9-pin socket. I also have a full set of maunals thanks to Nolan Lee and his website.

The I-177-A tester gives readings for 6L6-type tubes that are right in line with what I would expect. (Around 5000-6000 micromhos.)

Using the MX-949 adapter, I am now trying to test several 12AX7, 12AY7, and 12AT7 tubes. But here's the problem: With the dial settings specified in the test data tables, I seem to be getting Gm readings that are not close to the readings given in various tube data sheets.

Here are the dial settings I am using for 12AX7 tubes:

Fil: 12.6 volts
A: 4
B: 2
L: 0
R: 19
MMHOS: 3000

At these settings, a known good 12AX7 gives a Gm reading of around 700 micromhos for each of the two sections of the tube. That seems too low.

If anyone has information on what a typical correct Gm value should be for a 12AX7, 12AY7, 12AT7, and 12AU7, I would appreciate your response. I would also appreciate input from others with an I-177 tester and MX-949 A/U adapter as to what the correct L and R dial settings are for these tube types. (The manual could be wrong.)

Thanks for the help.

Now be sure and spam the group with your ebay ad several more times so
we know when there is only one hour, 30 minutes, 15 minutes, 1 minute
left so you might make an extra buck.

Hi,
You won't get any useful Gm figures for a 12AX7 from an I-177. Its
5VAC of grid signal is way more than a 12AX7 can take without driving
the grid positive.

2363. Homebrew dipole help please?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-10 14:09:27 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <eeTdc.20956$n37.1767812@read2.cgocable.net>
Source record: 24274

Hi
We have put together a dipole, each leg is 66 feet. We put a 1:1 balun and it is running about 60 feet of 50 ohm coax. Presently it is about half way up the tower it is intended for so we could check the SWR before getting it up to the highest point. Presently each leg has some lags and dips, no major bends but it is just hanging there, over some bushes and the entire thing is over top of the house, and not touching anything but is very close to some steel guy wires (uninsulated).
Now we can only tune this down to a useable SWR on the 80m band. On all other bands we cannot tune it down to a safe operating range. We are using a good antenna tuner but cannot get anything useable except for 80m. Here we are able to tune the SWR right down.

Questions???
Would we be better without that balun?

Is the fact that the dipole is still too low and close to the guy wires (but not touching) our problem?

Any suggestions please??

Thank you.
Bob

Well, seeing that it is cut to be an 80 meter dipole, I would expect success on 80 meters. It is very difficult to make a dipole work on even harmonics, so I would expect trouble on 40, 20 and 10 meters. 15 should be usable however.

Be aware that the SWR measured between the tuner and the transmitter only measures the happiness of the transmitter. You may have a perfect SWR, but you may dissipate all of your power in the tuner! What do you consider to be a "usable" SWR?

If you really want to do this, I would abandon the balun and coax and use ladder feeders instead, but you will need a tuner that can feed a very high impedance balanced load on 40, 20 and 10. If you want to use coax, your best bet
would be to change to a trapped dipole, which electrically shortens itself on 40, 20 and 10.

2365. Antique Radio Swap Meet in NC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-10 15:05:07 UTC
From: "Ron, KC4YOY" <kc4yoy@carolina.rr.con>
Message-ID: <D2Udc.1530$Hj1.98755@twister.southeast.rr.com>
Source record: 24276

Mark your calendars now for the CC-AWA Spring Swap Meet
at the North Carolina Transportation Museum
"Spencer Shops" in Spencer, NC on Saturday May 8th, 2004.

As always, admission is FREE, vendor fee is only $5.

Please keep in mind that these events start early,
usually between 7 & 8 AM, and are all done before
noon. So take my advise, don't show up at 11AM
and expect to see anything except folks packing up
the goodies they bought while you were still asleep.

For driving directions and a link to the "Spencer Shops"
web page, please visit the CC-AWA web page at,
http://www.cc-awa.org
Then just click on the menu button for the Spring Swap Meet.

Spencer is one of our best and longest running
swap meets.
DON'T MISS IT.

See ya there.

Ron

Thanks for the response.

Is there a link or site that would clearly explain how to build the traps to build the dipole at this length that would allow usage on 40, 20 and 10 meters? Now I believe there to be no chance to tune this configuration down to a useable SWR. Something safe that will not damage the transceiver while transmitting.
I would prefer to use the coax and dipole construction as opposed to the ladder line.
Any more advice is greatly appreciated.
Thanks

2369. Re: Homebrew dipole help please?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-10 15:23:12 UTC
From: K2DP <k2dp@charter.net>
Message-ID: <107g4b991cl7od2@corp.supernews.com>
Source record: 24279

Bob,

Feeding a dipole with coax cable which does not include the use of traps or multiple elements resonant on different frequencies will only be resonant on the frequency the antenna is cut for. In your case, a 132 foot dipole is resonant on 80 meters, as you have determined. The use of an antenna tuner with "balanced feed lines" (ie: coaxial cable) will not permit you to magically tune a non-resonant antenna to any frequency.

However, if you change the feed line to a balanced line, ie: 450 ohm PVC covered ladder line, (readily available from any ham store), and use an antenna tuner capable of matching "balanced line" (ie: the tuner has a built in balun), you will be able to match that antenna very nicely on any frequency where the antenna is at least 1/4 wave length of the lowest frequency on which you plan to operate on. So, in this case, your 132 foot dipole, fed with 450 ohm, PVC covered ladder line and matched by an appropriate antenna tuner, will be capable of matching the antenna on all amateur bands from 160 meters through 10 meters.

Some cautions about using open wire style feedlines (including the PVC covered ladder line). Since you are using a tower to support your dipole, do not tie the PVC covered ladder line to the side of the tower or bundle it with the other coaxial cables you may have comming down the side of the tower. Since the PVC ladder line is not shielded cable, it will electrically "couple" to either the tower or the other coax cables, thereby "detuning" your antenna and creating lots of high loss in what is actually very low less feedline (open wire of PVC covered ladder line). It is best to dress the ladder line away from the tower and other coaxial cables, rotator cables, etc by using either standoffs (like you used to see on old TV antennas that were fed with 300 ohm ribbon line) or allowing it to be supported at the top of the tower and then stretched across your yard to a point on the roof or side of your house, thereby suspending the feed line in open air. YOu should also keep the feedline away from metal gutters and downspouts.

I hope that you find this helpful. You can find additional information in the ARRL Antenna Handbook or ARRL Handbook as well as many other sources. Feel free to drop me a line if you have any questions.

73,
Dave, K2DP, St. Louis, MO

> Mark your calendars now for the CC-AWA Spring Swap Meet
> at the North Carolina Transportation Museum
> "Spencer Shops" in Spencer, NC on Saturday May 8th, 2004.
>
> As always, admission is FREE, vendor fee is only $5.
>

Something new we're going to add to our Saturday
Swap meets, starting at Spencer, is something that has been a popular part
of the Charlotte Conference for several years is the
end of meet "Radio Rescue" auction.
At around 10:30AM or so we will start the bidding.
Goodies that you've been carrying around and want to
get rid of, but just can't make yourself throw away,
leftover items left over from the day's meet, etc.
are welcome, as long as it's of interest to radio collectors.

If you have items that you would like to donate to the auction
with the proceeds going to the club, that would be much
appreciated too.
At the Charlotte "Radio Rescue" auction the club got about
$115 from donated items for the auction. Thanks a bunch.
Things like this go along way toward helping keep down
the rising costs of hosting Antique Radio events in the
Carolinas.

So hit the garages and basements, bring out those
projects sets you know you'll never get around to,
those junk boxes of parts, etc. and bring them to Spencer
on Saturday May 8th.

We're really looking forward to seeing everyone there.

73, Ron Lawrence, CC-AWA President

OK. I do not personally know of any links, but most versions of the Radio Amateurs handbook, or the ARRL Handbook as it is now called, would contain pertinent info. I just looked and the current version describes your exact plight and the ladder line solution. It also points out a solution I had omitted, and that is to use your coaxial feedline to feed multiple dipoles, one for each band. Don't know if that is possible in your situation.

I mis-spoke when I commented that an 80 meter dipole should work on 15. It will not work well. I was thinking of using a 40 meter dipole on 15, which I have used with success.

Finally, if you are new to antennas, I would offer that, in my experience, no matter whose plans you follow and no matter how accurate your measurements, getting a wire antenna to work involves a lot of "cut and try." Don't be discouraged if your first attempt is not perfect. Try to identify the problem, figure out a solution, and try again!

In article <DfKdnarFip1kmuXdRVn-tA@giganews.com>, "BFoelsch"
<BFoelsch@snet.ditch.this.net> writes:

>Well, seeing that it is cut to be an 80 meter dipole, I would expect success
>on 80 meters. It is very difficult to make a dipole work on even harmonics,
>so I would expect trouble on 40, 20 and 10 meters. 15 should be usable
>however.

This is all true for a center-fed dipole. You might want to try the "Fritzel"
trick, which is to move the feed point from cetner to a 1/3 - 2/3 point
(whichever side is closer to your shack). This feedpoint will give you about
600 ohms on the even-harmonic bands as well as the 80m fundamental. In fact, I
think the only band that my dipole won't load is 18 (aw shucks).

>If you really want to do this, I would abandon the balun and coax and use
>ladder feeders instead, but you will need a tuner that can feed a very high
>impedance balanced load on 40, 20 and 10.

Unless you can find or make a 600:50 or 600:75 balun (like the one that came
with my Fritzel dipole), you can just feed it with 600-ohm ladder line. Your
tuner will need to feed that balanced load, but at only 600 ohms, not that high
an impdenance.

> Would we be better without that balun?

No. The balun is not the problem.

> Is the fact that the dipole is still too low and close to the guy wires (
> but not touching) our problem?

Only in that it's impedance will change as you raise it, but it's not the
problem on the other bands.

> Any suggestions please??

As BFoelsch <BFoelsch@snet.ditch.this.net> suggested, you could put traps in
the wires to make the dipole resonate on other bands. Although I agree with
him that ladder line would be a better choice if you stay with a dipole,
let's back up a step and talk about other options.

First, coax: if you _must_ use coax (Has to be buried? In a pipe? Safety?):

1. You may simply add other dipoles to the feed point, i.e., have multiple
dipoles with a common feed. It's cheaper and much simpler than using traps,
but will require multiple support points at the ends. This will work as well
as separate dipoles for each band, but has the disadvantage of still losing
power in the coax.

2. You can cut the feedline to 1/2 wavelength at 40 meters, and your tuner
will see the dipole impedance instead of the composite impedance of the
coax/dipole combination on 40, 20, and 10, where the coax length is 1/2, 1,
and 4 wavelengths long respectively. You'll need to know the velocity factor
of the coax, or use a noise bridge to cut it to length. This is a _LAST
RESORT_ with coax, because

(a.) It's very reactive, so will only work for a narrow band.
(b.) You still have the loss caused by high SWR in the coax.
(c.) Your tuner must be able to drive a highly inductive load.

(d.) If you use high power, you might exceed the coax breakdown voltage because of the SWR.

Now, other options:

1. A Rhombic. If you have enough real estate, and you're aiming at a particular area,a rhombic will dramatically outperform a dipole. See http://www.tpub.com/neets/book10/42o.htm for details, but remember you'll need ~200 x ~150 feet of space for an 80 meter rhombic.

2. Use a random wire line. If your shack is at the edge of your property and you don't have room for a rhombic, you'd do better with a random wire, loop, or vertical than with a dipole fed with coax. See the antenna book for designs, but keep in mind that unbalanced antennas depend on a good counterpoise for effective operation, so you'll need to consider your ground resistance. You'll also have to pay a lot more attention to grounds and isolation, because unbalanced antennas mean more RF in the shack.

3. Tune the tower. You can shunt-feed the tower, and the guy wire system, if you have a good impedance bridge to select the feed point. You'll need to ground the tower and either ground or insulate the guy wires, depending on the tower height, guy wire length, etc. Again, see the antenna book. The chief disadvantage of this and other vertical elements is safety: if you have children around, you'll need a fence to prevent RF burns.

4. Verticals: if you put in a good counterpoise, verticals can outperform dipoles, especially those fed with long lengths of coax. The work is in the ground system: you'll need to dig up a lot of yard, but you'll only do it once.

I recommend you spend a couple of days going through http://www.tpub.com/content/neets/14182/.

HTH. YMMV.

Alan--

Ah, I see. But at least I can still get relative readings from tube to tube, I suppose. (i.e. Get a scale reading for a known good tube, and compare others to it.) That is of some use to me--if the readings are somewhat linear.

Oddly, the "Good/Bad" reading seems to work properly for 12AX7's. (Known good tubes test in the midle of the green range, and a couple of known weak tubes test just below green or into red.) Can you comment on that?

Questions:

Do I risk damaging these 9-pin tubes by testing them in the I-177?

Is there a preferred Gm-capable tester for 9-pin tubes?

Thanks,

--E

P.S. I forgot to mention that my attempted Gm readings were done with the "L" dial set to "Gm" (i.e., 60), as is standard practice.

Yes I think the readings are generally proprtional to Gm, which is
why the good-bad scale works. It's possible however that variations
in the operating point could swamp the Gm variations: in other words,
a tube that happened to draw more plate current for a given grid bias
might test unusually strong even though its Gm was not higher.

Any tester made after, say, 1950 will probably use a lower grid
signal than 5V. The lower the better, for low-bias tubes like the
12AX7.

2381. Need part for Tektronix 491 Spectrum Analyzer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-11 01:38:30 UTC
From: Dave Woolf <NOSPAMdwoolf@worldnet.att.net>
Message-ID: <4078A1A9.1050001@worldnet.att.net>
Source record: 24292
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I am looking for a part for a Tektronix
491 spectrum analyzer. It is called the
RFI filter or the Low Pass 275 V AC Filter
The Tek part number as listed in my
service manual is 119-0095-00. It is a
metal can that on one end has the male
connector that the AC cord plugs into.
The other end feeds out the line voltage
to the internal fuses.

The failure is interesting. At some AC
voltage around 105 - 110 volts there is
a breakdown and short that blows a 20 amp
circuit breaker. The short is not permanent
as I can turn the unit off/on and it will again
work below the above voltage. I know it is
the filter as this is the only thing that is
before the internal fuse which never blows.

I have a work-around by running the unit
on a variac and keeping the voltage at
around 100 volts. But I am not sure how
long this will work, so I would like to
replace the filter.

Anyone know of a source?

Please remove NOSPAM from my e-mail address
if replying directly to me.

Thanks,
Dave Woolf - K8RSP

Well, with some care, you could make one. It's a lp filter that cuts off somewhere above 60 Hz. If you don't want to build one, try to find some discarded hospital electrical equipment. They all have filters that are tested for low leakage to the chassis.

Source record: 24307

Hi all

I have it back up without the balun, and still have to use the coax for now.
I am able to tune it now on all bands but I am sure there is a lot of power
loss from the tuner. I grounded out all devices in the shack but still
receiving a lot of RF interferrence on tv, computer, and home alarm.
Thanks for all the advice, really appreciate it.

Ever Wondered What Happens When the Cameras
are not On During Survivor or Temptations Island ?

Curious About What Happens Behind Closeed Doors
On Big Brother or American Idol?

You Know Crazy, Wild and even Obscene things Happen!

The Networks Dont Want you to See This!!!!

---> http://outtakes.bigthicketdirectory.net/ <---

BUT WE SHOW IT TO YOU!!!

BECAUSE THE CAMERA WERE ROLLING the Shots just got
BANNED or CENCORED but we Have the SECRETS from REALITY TV

This is for real You Know You Want to See It!

More Erotic Than Temptation Island
Beyong BigBrother
Sexior than Survivor
Better than the Bachelor
Raunchier than The Amazing Race

Nasty Obscene, erotic, dirty, insestuous, gross, indecent,
sleezy, impure, wild, erotic, pornographic, smutty,
risque, sensual, sexy.....
YOU NAME IT - THEY DID IT
ADD WE HAVE THE PROOF

EXHIBITION VOYEUR

---> http://thbgnwphs.nom.vg/ <---

The Contestants Did it all and the NetWorks Couldnt
Show it, it was Banned, Cencored there Secret
Now we show you what they were doing!!!!

Fetishes, Lingere, Lesbianism, Bi Sexual Experiments,
Foot Fetishes, FORCED SEX, Cross Dressing, Swinging,
jacuzzi group sex, threesomes, hi heels, rubber,
Whatever turns you on - they did it while they
thought no one was watching.

The Real Private Secrets from, Survivor, Bachelor,
Bachelorette, Temptation Island, Mole, Joe Millionare

Contestants caught naked, stripping, playing, sucking,
fucking

Did you know some contestants were lesbians some were
sluts, On one show a chick gave everyone a blowjob
including the camera MEN!!!!

Behind Closed doors, in changing rooms, dressing rooms,
in the bushes, private sets, closets, showers, lakes,
all sorts of places they thought the cameras were not
around, BUT THEY WERE and WE GOT THE SHOTS!!!!!

All the things that got Cut out, the
camera men saved them after the Network
cut them and banned them.

You Wont See this ON Jerry Springer!!!!!!!!

You Think Girls Gone Wild was HOT This is like
The Sexual Olympics, but only for Real

The Cameras Caught them - The Networks CUt them
WE HAVE THEM

Quick Before they get Cencored or Banned Here!!!

OutFuck - OutSuck

Very nice condition CU-168, made by Gailbraith-Pilot Marine. Has been in daily use in my shack for the last 6 months or so. Good front panel, handles have some paint chips. Includes SO-239 to N-Connector adapters..

I want $80, plus shipping, approximately 50 lbs.. I will make sure that it is well-packed!

Packets have just now been mailed. If you haven't gotten one in a
couple days, I'd email or phone the person in charge of outside.
Make sure to check your packet to be sure everything is included that
needs to be.

I'll bet my 1928 Hickok really "slams" that grid signal. It's so old that it has a 5-pin adapter with grid cap for them new-fangled screen-grid tubes, tetrodes or whatever they called 'em.

It seems to use a wattmeter type of meter movement (dual coils) to multiply and correlate the grid drive nad plate output to compute the gm. Very cute unit.

You probably have a lot of feedline radiation.

Some suggestions:

Although I ordinarily don't care much for crossposting, you are going
to get so many different answers that your head will spin since you are
single posting your message to so many groups.

You should also take a look at some of these pages:

http://www.electronics-tutorials.com/antennas/antenna-basics.htm

http://w1.859.telia.com/~u85920178/antennas/anten.htm

Your antenna is simply not the right length for the other bands. If you
even *can* tune with a coax setup, remember that you aren't changing the
impedence of the antenna, you are only providing a match between the
tuner and the radio. You will still have the coax/antenna mismatch to
deal with.

I am in need of a 60 watt mod xfmr. I want to use P-P 807's to modulate a command transmitter about 120 watts input to the 1625s.

Just missed a new Triad unit on eBay due to dumb bidding. Stancore , Thordarson etc all fine.

Please state condition and price.

I have and ART-13 Mod xfmr but have no idea the pri and sec impedances. Maybe it would work. Any ideas?

You can replace it with a stock Corcom EMI filter from Digi-Key.

This thing is a pi filter with an inductor inside and some shunt
capacitors. One of the capacitors is on the way out.

Everything he said is true, but, from years of acting like a Hardly Any
Money kinds of HAM, I know that you can get quite-useable results WITHOUT
a balun.

For years, my main antenna was an "unbalanced dipole" (sounds like a good
name to me) with one leg about 250 feet long and the other leg about 275
feet long fed with an unknown length of "true" 450-ohn open-wire feeder
(two wires separated an inch with pencil-diameter spreaders about every
six inches, not the more-common almost-looks-like-TV-leadin-with-holes-
in-it feeders, but probably will make little difference) and using the
simplest tuner I could build: _____
\ | / antenna
\|/
|
| open-wire feeder
|
X (see below)
|
antenna +----------+ v alligator clip
+------+ output | optional | +-------+--+
| xmtr +-----------+ VSWR +---X-+ inductor +-- (no connection)
| xcvr | | meter | +---+------+
+--+---+ +----------+ ^ alligator clip
| ground |
| lead +-----+-----+
| | capacitor |
| +-----+-----+
| |
+-----------------------------------+
|
Ground

and it worked fine.

I even have a tuner like this in my pick-up truck, with just a slight
modification: small capacitors mounted on the ends of the inductor
wired at each X in the above sketch. For perfect matching, you need
to be able to adjust the inductance ANYWHERE around every turn, but

that's hard to do in the constricted space of a truck cab, so I use the eXtra capacitors to "subtract out" a little inductance in either or both of the two "windings" (between the input and the first alligator clip and between the first and second alligator clips). Overkill, perhaps, and looks like an early version of the Starship Enterprise's FTL engine, but it works.

You talking about the sidetone osc or RF keying ?

Like crap, still gas noises ;-) Just receive, not RF keying. Haven't bothered putting a key on it, thought I'd get receive working first.

Sounds like your BFO is dead, and all you are hearing is
the AM noises that are riding on the carrier.

SSB goes : quack quack quack, doesn't it.

Can't say about the first lot but think that the last lot of them was
made around 1977.

At the Boxboro Mass ARRL convention around 1975, National had a
display booth.

At the time they were still offering the NCL2000, the NCX1000 the
HRO500 and the new HRO600 (with cesium atomic reference oscillator
option - very impressive).

After the factory bankruptcy, one of their former engineers,
Maximilian Fuchs, bought out the lot of NCL2000 spare parts and may
have even assembled a few more of them.
Until around 10 years ago, I still saw his ads for NCL2000 parts and
service in QST.
I don't know if Fuchs is still alive....

Fuchs had also designed and marketed a product of his own, the "VOMAX"
split band microphone processor/compressor.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Allied Radio Model 2509 Short Wave Receiver.....$60 plus shipping
This is a solid state 5 band short wave receiver that covers the AM broadcast band, and the following short wave bands:

* 5.9-6.25 MHz
* 9.45-9.85 MHz
* 11.45 - 12 MHz
* 15.05-15.55 MHz

This radio is in excellent condition and sounds great on all of the bands. I found it to be quite sensitive even with the whip antenna that is attached. The radio will run on both ac and 12 volts DC. Includes the original manual.
http://members.cox.net/radiostuff9/allied_sw.jpg
http://members.cox.net/radiostuff9/allied_sw2.jpg

Electrovoice Model 623 Microphone - New in box.....$135 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Turner S22X Crystal Microphone.....$35 plus shipping
The unit has been tested and works. Cosmetically it has pitting but has been polished up and presents itself quite well!
http://members.cox.net/radiostuff9/mike.jpg
http://members.cox.net/radiostuff9/mike2.jpg
http://members.cox.net/radiostuff9/mike3.jpg

Eico 249 VTVM.....$30 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$40 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5,

15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$25 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

William Nye Speed-Ex Telegraph Key.....$35 plus shipping
http://members.cox.net/radiostuff9/nye_key.jpg

Speed-Ex Brass Telegraph Key.....$25 plus shipping
http://members.cox.net/radiostuff9/key99.jpg

Winslow Telegraph Key.....$25 plus shipping
http://members.cox.net/radiostuff9/winslow_key.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$40 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg

http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

The original ARC 5 mod transformer is perfect for this. seems that
they are hard to find..another idea is look for an old AM marine ship
to shore radiotelephone..there are lots of them somewhere,they are
obsolete. most common transmitter used pair 807s final and pair 807s
modulators..if you find one it will cost a whopping $20 or less.lots
of other good parts also..original marine freq. 2 to 3 mhz.AM at 150
watts input.. good luck 73 Harold W4PQW

Bob,

As another poster mentioned, there is an easier way to add more bands to your antenna than building traps. And that is to add additional wires for the other other bands. That will give you a multi-band dipole.

So get some more wire and insulators. First thing to do is add a 40-meter dipole. This is a bonus deal because the 40-meter quarter wave dipole will also work as a dandy 3/4 wave 15-meter antenna.

Add other bands as you see fit. Easy and cheap. Don't really need a tuner if you cut the elements carefully and keep your operations close to the resonant frequency of your antenna.

This is how I (and thousands of others) did it back when I got started. Still do!

2429. Hammarlund CB-23: need crystals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-13 12:54:19 UTC
From: k5dh@raytheon.com
Message-ID: <%pRec.1$od.0@dfw-service2.ext.ray.com>
Source record: 24340
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.cb

I'm almost finished restoring a 1960s Hammarlund CB-23 base station. The date code on some of the parts indicates the set was built in 1963 (or at least those parts were made in '63). I need 3 crystals to complete the electrical restoration:

Y106 = 25.335 MHz
Y109 = 25.375 MHz
Y110 = 25.385 MHz

I'll buy a whole parts rig if I have to, but I'd prefer to buy just those crystals.

And yes, I'm aware of the multitude of crystal houses out there, and I've done business with most of them over the years. I'm trying to keep the cost down. If I buy them new, those three little rocks will cost me $45 to $60!

73,
Dean K5DH

> once.

If you want to avoid the expense and digging of a conventional
radial system, go to the hardware store and buy several 50-foot
rolls of galvinized chicken wire fencing.
The cheap, "big hole" stuff works fine.
Put a ground rod at the center
below your vertical and connect the fencing.
Make a big "X" with it under your vertical.
If you really want to do it up right, make a "*" with it.
Use rocks or whatever to hold the stuff down flat.
The grass will grow over it and you can cut (using a
high blade setting, of course).
No digging, no miles of wire and it works very well,
as long as you secure it flat to the ground
so you don't snag a foot on it.
If you're in a wet environment
you'll have to replace it every couple of years,
but it's easy to do.

They're the small holders with wire leads (as opposed to
plug-in pins). HC-18/U, I think (or is it HC-25/U?)

With a 25 MHz operating frequency, I'm going to assume
they are 3rd overtone.

Oddly enough, that model (AC-47) uses a 2.5VAC grid signal. And
yes, it uses a dynamometer meter movement that measures AC
milliamperes directly (6.25mA F.S.). It also has a DC plate
milliammeter.

it
> > once.
==========
Agreed. But there's too much emphasis placed on the number and length of radials needed for a satisfactory ground electrode system for verticals of moderate height.

Much depends, of course, on the quality of the soil under the antenna but in general the number of radials, or other electrodes, in the ground needed for satisfactory operation is fewer than usually recommended in the handbooks and magazine articles and by the plagiarists and the old wives on newsgroups who play things far too safely.

1. Forget all about Marzipan the Magician's magic number of 118.5 radials of 1/2-wavelength radials.

2. Don't bother with ground plates or rods if you have space to lay shallow-buried radials. They are hardly better than a shallow buried radial of length equal to their longest dimension. Generally they are a waste of effort and material.

2. In ordinary garden soil begin by laying one shallow-buried radial of 1/10th or 1/12 wavelengths long at the lowest frequency of interest. There's not much point in increasing length of radials longer than the height of the vertical antenna they are associated with. In good soil much shorter lengths are satisfactory.

3. On receive, using your S-meter, measure signal strength of a number of stable radio transmissions. These will usually be found at MF and LF but include HF if there are any to be found. Take averages over time periods at the same time of day or night.

4. Now double the number of radials. Roughly of the same length. Spread them around over the space available. Carefully record the improvement in signal strenghts. Guess at fractions of an S-unit. Keep your receiver stable.

5. Roughly double the number of radials again. Record signal strengths as before.

6. Keep doubling the number of radials until there is no significant increase in received signal strengths. Add one or two more for luck. Then STOP!

7. For extremely poor, arid, sandy, rocky, infertile soil, start with 1/8-wavelength radials at the lowest frequency of interest.

8. For highly fertile, moist, agricultural soil, start with 1/16th wavelength radials at the lowest frequency of interest.

9. At 10 or 20 MHz and above, the minimum length of buried radials is not of great practical importance. Most backyards will accommodate them. A length of 4 metres or 12 feet will suffice in reasonable soil.

10. If there's any wire left over after laying radials then use it to increase the number of radials rather than their length.

I am reluctant to use a personal example to ullustrate the foregoing philosophy but I will say that for many years I have used an inverted-L on 160m and higher frequencies with only 8 radials of varying lengths up to 6 feet, each terminated with an earth rod of 0.5 inches diameter, 30 inches long. The garden soil is of the order of 70 ohm-metres. I have used the system in the knowledge that if I had doubled the length of the radials, or doubled their number, there would have been no detectable increase in signal strength on either transmit or receive.

Reciprocity Rules !

Hi, all concerned:

Tks to all who replied.

I just completed the project of grafting the old HV primary power relay coil onto a new P&B KRP-style relay movement, cuz the current inrush at turn-on finally made the relay stick solidly enough that pounding things wouldn't jar it loose any more.

One of the Solitron rectifiers is split on a seam, but still operating. Any specific recommendations for replacement?

Try your local CB shop and see... there are a lot of them out there.
Ask around at a nearby truckstop and they'll tell you who does that
stuff.

Most of those guys probably have an old 23 channel solid state rig in
the parts bin somewhere that they'll give you to cannibalize for crystals.

I have obtained a 75A-4 that has been scavenged for a few critical parts, but is otherwise in very good condition. I am looking for the BFO tuner assembly. This is the can that encloses L31, C117-C120 and associated parts. I have the tuning shaft that connects to the passband tuning knob & PTO, so just need the shield can and its contents. Does anyone out there have a parts rig?

Failing that, is anyone willing to lift the shield cover off their BFO and take some pictures of the contents so I can reproduce them?

Possibly, but sometime around the great trucker phenomenon, the crystal
manufacturers weren't able to keep up with the demand for CB crystals,
and so the synthesized 23 channel CB was born. You will need to find
a CB that was built earlier than about 1975.

I haven't seen a "local CB shop" since about 1975. I must hang out in
the wrong circles. I wasn't aware that anyone tried to make a living
fixing CB's anymore.

I have a couple drawers full of CB crystals. Whether I have any for the radio listed, I'm not sure. I'm not familiar with that particular model. But I can test all crystals sold for operation prior to shipping - as I have 2 different testers. What I will NOT do, is guarantee them once plugged in. "I" do not guarantee electrical parts unless "I" personally insert them. ALL are $7.50 EACH plus any shipping. Payments via Postal MO or Pay Pal.

Lou

Tune to the lower part of the 10M band and you'll hear plenty of them advertising. There's one that is on rt. 295 in Virginia that can be heard all over the 6M band with their every-fifteen-minute advertising message which the broadcast on channel 19 with some sort of mistuned bandsplatter machine.

I think most of these shops make their money from installation and modification work more than repair work, but there are quite a few around. Not like during the CB craze of the seventies at all, but check your local truckstop.

The "Night Eagle" employs a standard Hi-Z Crystal head + on a 2 FET preamp stand with an adjustable low-Z amplified output.

Hi Guys,

I would be very surprised if you could find the crystals
I need in anything other than the Hammarlund CB-23 (or
the identical Lafayette model that Hammarlund made for
them). The CB-23 used a rather unique scheme of crystal
mixing that I've never seen in any other radio (and I've
been tinkering with CB gear since 1971). The frequencies
I need are:

Y106 = 25.335 MHz
Y109 = 25.375 MHz
Y110 = 25.385 MHz

I'm assuming that they are 3rd overtone crystals, since
most crystals above 20 MHz are.

The holder type is HC-18/U (the small holder with solder
leads as opposed to pins).

Thanks and 73,
Dean K5DH

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 18th 2004
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

There's a nail polish, made by "Artmagic" USA, Brooklyn NY. Called 163 Peacock blue, it's a perfect match. Dip your bulbs in it, let it set and you don't need the lenses.

Regards

Source record: 24183

- RIGHT dial a logging scale ONLY -

Your read the frequency from the LEFT dial -

You will notice that on the very top of the frequency scale it's also
divided into sections:

| 0 | 1 | 2 | 3 | 4 | and so on

So to log a station -

Read the LEFT Frequency Dial and notice the top logging scale.

Then Read the RIGHT logging scale.

So 10 Megacycles would be 2 - 45.5 or 245.5

You probably see the weakness in this system - not all SP-600's are
calibrated exactly alike - so if you went to 245.5 on your SP-600 you would
be near 10 megacycles but not exactly on it.

It does work great for shortwave broadcasts - just note the time and logging
scale and you will always be able to comeback to that AM station.

Mine is a SP-600-JX S.N. 129 !!!

- Biz WDï¿½HCO

It doesn't matter what the actual impedance of the modulator or the
final is. It is the ratio that matters.

The ART 13 transformer has a primary rated at 15000 ohms and the
secondary at 7300 ohms. That is a ratio of about 2:1.

The Johnson viking 2 (pair of 1625s modulating a pair of 6146s) used a
transformer with a ratio of around 2.4:1 or so if I remember right.
That was a little high as the modulators would go into clipping before
100% modulation could be achieved on that rig. A little lower ratio
mod transformer would have allowed a little more modulation.

So the ART 13 transformer is just about ideal for that kind of setup.

One small thing, don't go too ape s*** crazy with substitutions.
You must understand that for a given wattage transformer core, higher
impedance windings will have more turns than lower impedance windings.

It wouldn't be ok to sub a 2:1 transformer that was meant for 10K
for a 2:1 that was meant for 1K. Not at the design power for the
transformer.

Why does this matter? Subbing a much higher impedance transformer
for a low impedance transformer will result in greater losses due
to the higher resistance of the windings. Subbing a low impedance
transformer for a much higher impedance transformer will likely result
in core saturation and loss problems due to the higher fluxes the
core sees. There aren't enough turns on the core.

Try find a sub that is close to the design impedance of your desired
transformer.

While it is true that there is a limit as to how far you can "stretch" the impedance of a mod transformer before getting into trouble, you can go an amazingly long ways.

As an interesting example: The Stancor Poly-Pedance transformer that has multiple taps to obtain various impedance ratios (15 to 120 watt series) uses the same taps for 2000 ohms primary to 1150 ohms secondary (1.74:1 ratio), as it does for 20000 ohms primary to 11500 ohms secondary. Also the same 1.74:1 ratio! That's a 10:1 range!

The link below has the ART 13 and other transformer info.

http://www.amwindow.org/tech/htm/modtran/modtran.htm

Select Miscellaneous to find the ART 13 transformer specs and connections.

Other transformers (stancor etc.) are listed also.

Hi Gary,

Yep, you can get away with alot if you start with a transformer
that is overdesigned. The Stancor Poly-Pedance transformer must
have an excessive amount of iron for the 20K range, and an adequate
amount for the 2K range.

Not always the case. One would tend to think that the ART-13's
tranny would be built to be on the light side, being as it was
made to fly in an airplane. But I don't remember them being all
that light.

Hi Dale...
Yes, there are lots of homebrew remedies. One that works for me is blue LED
in #47 bayonet fixtures.
If you want the "real deal" (what Drake used)
It is Roscolene 853.
I got a big sheet of it in January of 02 from Barbizon Light in Woburn, Ma.
http://shop.barbizon.com/

Got one sheet of it in a box..good to go forever!!

All is in good shape for there age and working perfect. Clean and fully aligned. THEY ARE NOT COLLECTOR QUALITY, OK. Lets get that out of the way. I'm tired of hearing from picking collectors. I can send pictures if your interested. Have manuals for both rigs. I will trade the complete setup for other radio gear, amps, etc or sell. Doesn't have to be perfect. Will not split. Make an offer after you see the pictures please. Prefer pickup as I cannot lift the rigs anymore because I'm disabled. I live in Klamath Falls,OR. I also have another HT-32 and HT-32A in non working condition. They are complete just need repair. I don't know what is wrong with them.

Hello guys,
only 1 minute of your time.....thanks!

I have the pleasure to introduce this accessory
to all DRAKE lovers: DDS-4

It is a modern DDS VFO with nice features and full plug and play.
You can see this toy at http://www.cqdx.it/woodbox/dds4-index.html

It has been planned from I0CG and assembled by me IK3VIG in nice
DRAKE's design handcraft box.

We offer it to hamradio comunity with experience professionality and
support even we are handcraftmans.

Thanks again for your attention and sorry for OT msg.

The instrument maker is a bloke in Nottingham. He's a radio ham, sadly a g7 who took the multiple guess exam.

He has made all sorts of stuff engineering wise. I've known him since he started makng different musical instruments.
A copy of a dobro metal guitar in stainless steel (he used two stainless steel sinks and soldering/welding (out of my depth here) the stainless was problem getting the right flux). Being the pedantic everything got to be right kind of bloke, (I'm a try this does it work , yes that'll do) He experimented with trying to put a transducer/pickup to amplfy the thing.

He bought some really expensive transducers and i loaned him one that was from maplins for 99p. There are two miracles here
1 it worked brilliantly
2 Maplins had some in stock.

I enjoy trying to play music but i have van goffs ear for music. (and stevie wonders eye for spelling)

Keep the good work.

Regards Ron

I've used both aboard ship.
In my opinion, the R-390 is a much better receiver.

That Mackay 3010, as I remember it, had some sort of frame-grid
pentode as an RF amp that used to short out with any static discharge,
near lightning strike or simply being overloaded by the ship's
transmitters.

That green/yellow frequency dial tape was also a pain in the butt to
repair. Its sprocket holes would wear. Of course, I'm talking about in
heavy duty usage.

The mechanical digital readout of the R-390 series had it all over the
dial system of that Mackay.

I've seen the 3010 sell for about $500 to $800 in excellent condition.
One neat thing about it was its cast aluminum chassis with each sub
circuit housed in cast "pockets".

Don't get me wrong. The 3010 is an excellent receiver. I just think
that the R-390 (especially the "A") is a better one.

73,
Doug/WA1TUT

QST reviewed the Mackay 3010B in April 1967 (they loved it
for its strong signal handling performance near the W1AW
kilowatts.)

The rf amplifier frame grid tube that Doug mentioned
as a weak point is the Amperex type 7788. It has an extremely high
Gm, and is sought after by the Audiophile croud,
so is an expensive tube to replace. Many 3010 receivers
have their front panel gouged near the broadcast band reject filter,
since that filter had to be unscrewed from the front panel
for access to the 7788 tube.

One advantage of the 3010 receiver, is that it uses the same
3.1 KHz plug-in mechanical filter as the Collins 75A4,
and a socket was provided for an optional 500 Hz c.w. filter.
The 6 KHz bandwidth is produced by a built-in crystal filter.

The tuning rate is too fast for good SSB, and you wind up using
the variable BFO knob as a poor man's fine tuning.
SSB was after-thought with this receiver. The BFO pitch control isn't
even calibrated "USB/LSB".

Also includes original manuals. Power supply cabinet badly bent from shipping with the power supply in it. Receiver has an optional filter in it (500 HZ. CW). Excellent front panels and knobs with a few cabinet marks in the original paint. Very clean interiors with some dust but no corrosion or grime. I have pics of the receiver but not the others as yet but will have them later today. I would like to see the station stay together as it was owned since new by the same ham. Appears the 75S-3C was bought in 1969 and the 32S-3 in 1971 according to the dates on the rigs and notes in the manuals. Still has all of the Collins tags and Q.C marks which are easy to read.
Non-smoker owned, 2700.00

Two more questions:

1) Is there a risk of damaging a 12AX7 by testing it in the I-177?

2) Is there an easy way to lower the voltage of the grid signal in an I-177?

Thanks.

I doubt it.
>
>2) Is there an easy way to lower the voltage of the grid signal in an I-177?

A resistive voltage divider at the 5V transformer winding would
lower the signal to (say) 2.5V, which is just what Hickok did in some
later models. *Theoretically* that would halve the Gm readings, but
in practice, you'd have to measure some known-good tubes to get a new
bogey value.

I handle tubes, but xmitter tubes are outside my normal
range. So I'd like to offer a couple tubes I've received
at good prices so they can go to someone who can put
them to good use:

(2) Eimac 4X150A - I believe these are brand new but
I don't have the original boxes. I can't test them, but I
guarantee they won't be DOA. I'll provide a full refund
if they are. $80.00 ea., or 2/$150.00.

(1) 8122 RCA - this tube came in a proper RCA 8122
box with a label from Gates Radio Co. in Quincy IL.
The tube appears to be new and unused, but I can't test
it. As with the tubes above, I'll provide a full refund if
the tube isn't full performance. The best price I've seen
is $225.00, I'd like $150.00 for it.

All prices above include shipping to any USA address.

Drop me an email if you can use any of these tubes.

Thanks for the bandwidth.

I guess an Extra should be able to figure it out. I would say it would be a lot of work to put UHF FM gear on 11 meters AM/SSB. Too much work in fact. Now if he was going to use them on GMRS FM I would say go for it BUT it would still be illegal as they won't be FCC type accepted. Get caught selling these things, lose your Ham ticket.

That doesn't make any sense. UHF gear is suited to the 400-600MHz
region. 11 meters is 27MHz. You would have to completely gut the
unit and replace all of the tuned circuits.

Besides, it is very ILLEGAL to run any non type accepted gear on the
11m CB band (unless the power is in the milliwatt region.. Even in
today's relaxed enforcement environment, running funny gear on 11m can
get your ham ticket pulled.

-Chuck Harris

OBTW, you are 18 days late for an april fools joke.

No, you need plutonium to do this right, and that's becoming more and more
difficult to get these days.

I seem to recall a "CB" class of operation IN the UHF region way back when.
Long before MURS and such came into play. Actually I think the new stuff
such as MURS replaced the UHF CB band. Maybe he is confusing the two bands?
IF NOT, WOW..... that is a task and a half. As others have stated,
legality will be out the window. Lou

There used to be something called Class A citizens band, which was AM modulation... I think on 460 MHz. There were a bunch of tube transmitters built for that band, most notably the Vocaline, and some of those can be sort of tweaked to kind of run on 440 MHz if you don't really care much about stability. A lot of them used bend-until-it-works capacitor and inductor technology.

I do not think this is a currently usable band. Although if it WERE currently usable, Fair Radio has a bunch of UHF AM aircraft transceivers for the military air band, which they are practically giving away right now. Not type-accepted of course...

>IF NOT, WOW..... that is a task and a half. As others have stated,
>legality will be out the window. Lou

The 11M crowd has never been one for worrying about legality. Which is kind of a shame since there's clearly a need being met there.

>Wouldn't that be illegal?

Hi OM,

Yes it would. It is against the law to sell Transmitters that are not
type-accepted for the band they are intended.

On the other hand, the Amateur radio service is the ONLY exception to
the rule. We CAN design, build, and operate non type-accepted gear.

On the third hand, the 11 Meter band is not Amateur radio service.
Even tho' we can work there, we must abide by all rules and
regulations for that service (all restrictions apply in spite of our
"privileges").

Quite right. Converting existing equipment to 11-meter use would
probably require individual certification of every unique piece or
type. Sure sounds expensive.

Issue 2: external power amplifiers are not allowed in the 11-meter
band... conversion of higher-powered UHF amps would not be legal.

Issue 3: equipment originally designed for UHF operation (1 meter and
shorter wavelengths) seems to me to be a less-than-wonderful choice
for conversion to 11-meter operation.

Issue 4: there's plenty of cheap 11-meter gear already on the market
(both legal-type-certificated, and outside-the-pale). Doesn't seem
like there'd be much of a [legal] market for converted UHF gear.

All in all, this idea sounds like a great way to lose lots of money,
and risk big fines and the loss of an amateur-radio license. As folks
may have noted, the FCC has recently raised their level of enforcement
against companies and individuals who have been playing loose-and-easy
with the rules about 11-meter operation and equipment sales.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll.

Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never!

The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant!

They demand a recount!

No, the experimental service is also available for people who want to
run non-type-accepted equipment.

I _think_ there might still be a provision under Part 73 to allow broadcast
stations to operate non-type accepted transmitters under certain circumstances
if they can provide measurements that the equipment meets the standards of
the type requirement, and they affix a label to the equipment. I seem to
recall that it only applies to equipment built by the station itself. This
may have been removed from the rule book since I took my First Phone test.

I think the rules say "no more than 5 (or is it 10) copies of the same
design per year.
Manufacturers who want to make more than that *do* have to get
certificated. That's
what the FCC calls "type acceptance" nowadays.....

Sad to say, the legitimate users of those latter bands are being driven
out by the FCC's refusal to do anything about the freebanders. God knows
that the auxiliary broadcast channels at 26 MHz are constantly being trashed.
I've had to move some government comms to 33 MHz where things are a bit
quieter.

I don't have any famliarity with that, so this is a guess. If the receiver doesn't tune one of the WWV frequencies, maybe there is a converter in there so you can receive WWV?

The FCC recently rescinded the ban on power amps that work in the 11 meter band. See the arrl web site for details...

Not entirely accurate... at least, not yet.

They have proposed rescinding the Part 97 rule which places a whole
bunch of restrictions on the manufacture and sale of amplifiers which
can be used between 24 MHz and 35 MHz (the 10- and 12-meter amateur
bands, and the 11-meter CB band). This change has not actually been
enacted - they're inviting comments on whether it's a Good Idea or a
Bad Idea.

They have _not_ proposed making any change to the Part 95 rules, which
currently make it illegal to actually _use_ any such amplifier with an
11-meter (CB) transmitter.

So - if their proposed rule change is adopted, it'll be easier for
amateurs to buy amps that can be used on 10 and 12 meters.
General-purpose HF-band amplifier designs will probably be revised, to
"open them up" to the higher frequencies.

It will still remain illegal to use any such amplifier on the 11-meter
CB band.

Whether this illegality will stop anyone... well, that's another
question entirely!

Close... that xtal calibrator does include a converter/mixer for
reception of WWV. The output is in the lower part of 40 meters. The
NC-303 has a red calibration point on the 40M dial and a WWV position on
the calibrator control knob.

There may actually be a market for converted UHF gear for CB. The key here
is CB, NOT 11 METERS. Some countries in Europe have FM CB. I don't know what
the frequencies are, but quite likely VHF or UHF.

Other than that, for anybody still reading this thread - ever hear of a non
amateur UHF SSB radio?

In general, this thread is in the same line as converting old black/white TVs to color.

I'm feeling it's a good idea. It's a good idea first of all because it
will now make it legal to sell a lot of those military surplus wideband
DC-to-daylight amplifier systems.

And it's a good idea secondly, because the CB crowd already has bootleg
linears and there is already a substantial underground selling the things.
If it's legal, maybe at least more of those guys will be using clean
linear amps that aren't bandsplatter machines. If the FCC can't stop
the sale, they can at least try to reduce the sale of the worst amps out
there.

This is also a good idea. It might be nice if it were enforced, but we
can't have everything.

Yes it's a troll post, but George by no
means needs any help on embarrassing himself.
He's been a troll in Rec.Radio.CB for years now,
using thousands of different screen nics and an AOL
account, so he really doesn't need any help to
embarrass himself.

Watch by his reply, you'll see either from
his Comcast account or AOL account.

A FR-114B/U Frequency Meter made by Florida Communications followed me home. After a bit of work I got it going and find that it will count to a little over 1700 Kc! It has 27 tubes and 6 readouts and will read out to 0.1 cps. Each driver card has 2 ICs and several transistors. Then time base is a 100Kc Bulova oven. Tube and IC date codes are 1969. Google didn't come with anything so I wonder if anyone out there has any info? I posted a pix at alt.binaries.pictures.radio. It's too nice to be a boatanchor or scrapped for the 5814A, 12AT7WA and CK 6844A.
Tnx & 73

Military Radio
Military Radio model 11-A/APN-12. This is a 15 tube radio, with an eye tube. The radio looks to be in good condition, and looks to be complete. It operates on 115 volts AC, or 26 volts, DC. I have not tried it to see if it works. It has no rust, and is very clean inside. Would make a nice piece of history. Only $40. See picture

http://southeasttexas.com/uploads/ACFB8B6.jpg
~
Can someone tell me what this is and what it does?
Also approximate worth?

Thanks in advance.

John posted, in part:

<< Can someone tell me what this is and what it does? >>

IFF is Identification, Friend or Foe. You have the airborn end of the system.

In early systems, which I believe is where this would be, age-wise, that transponder would automatically transmit a signal in response to having received an "Interogation," aka "Challenge" from a radar station. There were only three possible responses to an interogation: 1,2, or 3 blips. These would be seen on the Radar Station "B" scope next to the echo return signal of the radar. That's the one with the circular trace.

Each day a different one of the three codes would be assigned.

An aircraft that sent no IFF signal or a wrong one, would be assumed unfriendly.

As late as the 60s this type of IFF was in use. I was once a civilian employee/operator at an operational RADAR station. The secret IFF code of the day was not given to us. We tracked aircraft and gave the grid coordinates and IFF status to the Airforce on special lines. They decided if it was friend or foe.

It seems silly now, but at the time it was serious stuff to report "I have a bogey on my gadget and the parrot's sqawking 1" or 2 or 3.

Don

Hello everybody,

I've updated the list of the Drake R7A raffle. You'll find it at
http://home.online.no/~sindtorp/raffleDraker7a.htm

137 of maximum 150 tickets have been sold so far, so you still have the
chance to get yours. BUT HURRY! ONLY 13 MORE TICKETS WILL BE SOLD !!

Take a look at the program for the Drake Forum too!!

Thanks for your support!

2572. Questions on Pierson KE-93 rx

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-21 20:03:47 UTC
From: knudsenmj@aol.com.Oscar
Message-ID: <20040421160347.12062.00000065@mb-m02.aol.com>
Source record: 24133

The recent auction of a Pierson KE-93 receiver prompted me to get out mine, which does include the AC PS and speaker unit. ISTR it worked fine 5 years ago, but now it plays like a bandit on the BC and 1.6 - 3.5 MC bands, but is dead on all the dual-conversion bands. Also, the S-meter barely works, even with the powerful reception on the good bands.

The dual conversion is really strange. The 2nd converter is up on the RF deck as a 4th tube. It has a 2465-KC xtal, but absolutely no tuned circuit between the 1st and 2nd mixers. Is there any point in doing double conversion without something in between to cut out the image 910 KC above or below the signal?

Just would like some comments and hints on this odd rx. Not found on BAMA. All offers of schematics or manul gratefully received.

I'll sweeten the pot with my own observations. First, it's a very compact and well built radio, more or less a 6-inch cube with 12 tubes crammed in (plus a heater current regulator a la R-390A). The IF and audio stages are all on a sub-chassis that can be removed after pulling two plugs (more R390A inspiration).

The RF deck uses a TV turrent tuner (think mini SP-600) with tuned RF, mixer, and LO. The turret is bandswitched directly from the panel knob, and is chain-linked to a drum dial showing only the current band in use. Tuning is via plain string drive to a 3-gang capacitor and slide-rule needle, and is very smooth.

RF tube lineup is meat and potatoes: 6BA6, 6BE6, but a 6BA6 LO instead of 6C4. Another 6BE6 for the 2nd converter.

The function switch includes an SSB position, with a genuine product detector, though you have to turn down the RF gain for decent SSB audio. A vernier fine-tuning knob helps with SSB, and BFO pitch is adjustable, using a pot, not a capacitor. As with most mobile rx, the audio is powerful and the metal knobs are rugged.

The S-meter is in the speaker/PS unit, and has its own pentode tube to drive the S-meter from the AGC line, as a "phantom IF" tube. It seems the AGC voltage coming over the cable from the rx is not good, full of AC, even though the radio's AGC action is excellent.

This is a dynamite BC and tropical band DXer. Very selective, about as tight as you can get without sacrificing intelligibility. No selectivity settings, but what you have is good. Sensitivity is plenty good on these bands,

Odd that there's a current regulator tube (under the chassis, removed and jumpered out in my set) but no voltage regulator on either chassis. Probably the mobile supply had one -- anyone ever see that unit?

TIA for any commentary -- Mike K. AA1UK

>The mechanical digital readout of the R-390 series had it all over the
>dial system of that Mackay.

Now you've got all of us Racal RA-17 family owners shaking in our boots!
Will our dial tapes wear out soon? What will we do then?

Now, my RA-17C is pretty well worn on the front panel, seems to have had lots
of use, but the tape still reads within a KC, and the holes don't seem to be
worn.
Maybe Racal did a better job than MacKay?
Tnx es 73, Mike K.

Source record: 24138

I have a good quantity of sweep tubes, most new in box, some used, tested...
probably over 100 pcs total.... types like 6JE6A,C, 6JB6, 6JS6A, 6KD6, and
lots of odd fil voltage ones like 30KD6, 36LW6, 22JF6,
26LX6,etc,etc. Many in pairs.
Some of these can be used in audio applications as well as RF amps.

I am selling them all off now.
I post usually on rec.antiques.radio+phono, and am a board member of
Michigan Antique Radio Club.

If you or anyone you know has any interest, please email me now. I have
sold some on eBay but its time consuming, and I'd rather sell them here. I
am willing to make great deals on larger quantities. I also have sockets
for many types as well if you are building amps.
I will trade for lots of Centralab, Clarostat, IRC or Mallory control parts,
or eye tubes like 6G5/6U5/6T5/6H5/1629.
Dont wait, email me now if you have some wants.
Mark Oppat

I have a Collins R-388 Receiver for sale in good overall condition. This one powers up and works fine. Signals received on all bands. Front panel looks very nice. All original knobs. Pictures available. $500 plus shipping. This one is heavy!!!

I also have the hard-to-find cabinet for the radio. I'll include that in the deal. However, it will need refinished. No major dents or dings, but a repaint would make it very nice.

Please email if interested.

Hey Group,
Well I dusted off a collins r388 and wow it is alot better than I thought.So I took it to my Elmer and we found it had been messed with in the detector department.And is motoboating.With very weak audio.Luckily we have an original manual.But after doing some surfing I see that there are a number of mods that have been writin' up in varios mags over the years.Most seem to deal with making it recieve SSB..Anyway we replaced all the weak tubes and a few filter caps but it is putting out weak sound still.So I was hoping to get some opinions on whether to put it back as stock as possible or to go ahead and do one of the mods that are out there.I think I'll keep this one as it is just a great lookin and as I understand great perfoming radio.
Any suggestions?
Thanks
WesJ.....

If you got a broken radio and you modify it, you got a modified broken
radio.

Put a signal into the antenna terminals and measure it at each point along
the IF line and see if it is within the tolerances in the manual. Check
on all bands. Then follow the demodulated signal through the audio deck.

You'll find some bad caps, maybe some bad resistors too.

March your way into the weekend!

Join Nader supporters in DC, April 24-25,
as they rally for justice and equal rights

Washington, DC:

Saturday, April 24th, IMF/World Bank Protest - meet at 11am, 15th & H St, NW.

Sunday, April 25th, March for Women's Lives - meet at 9:30am, Smithsonian Metro Stop.

If you arrive late, ask a volunteer to point you towards the Ralph Nader group.

See you there!

Nader: Oil the Source of Two of Earth's Major Problems:
Wars for Oil and Climate Change

Protect the Environment and the People of Our Planet by Ending Our Addiction to Oil

Washington, DC: On Earth Day 2004, Independent presidential candidate
Ralph Nader highlighted as two priorities: ending the Iraqi occupation
and facing up to the immediate crisis of global climate change. "Future
geopolitical crises involving oil resources and environmental problems
will be diminished by finding alternatives to fossil fuels," said Nader.

Nader linked the two issues on Earth Day because he sees them as
symptomatic of the corporate oil-based, planet destructive behavior of
the Bush Administration. Nader has called for the United States to
withdraw from Iraq - including military, private military contractors,
oil industry and other corporations. Nader noted: "The war in Iraq is
unleashing widening cycles of violence. The potential for escalation of
violence increases every day the US military remains in Iraq. The way to
reverse the spiral of violence is for the United States to go back home.
The US presence serves as a magnet for the insurrection, kidnapping,
terrorism and destruction." Nader released a three-step strategy for
withdrawal earlier this week. See www.votenader.org for details.

deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque ° l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and
allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for 15 minutes, then allow it to set for at least
15 minutes more.
Serve over steamed rice; this dish is very impressive!

Stuffed Cabbage Rolls

Babies really can be found under a cabbage leaf -
or one can arrange for ground beef to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Oni

If you want to keep your ham license my advise to you is not to make any
conversions to 11 meters. CB radios still need FCC acceptance. If you
want to undertake the task of getting the acceptance then disregard my
previous advice. BTW the tests to obtain acceptance should only cost you
1 or 2 hundred thousand dollars if you are lucky.

Have you ever missed a sked or phone call due to the incorrect time???

Have a look at this pretty mantle world clock.
It is a conversation starter and looks great on the shelf.
It reveals the time in countries around the world at a glance.
This item is no longer being made. Cannot buy in any shop.
Made from real wood! - not cheap plastic.
Battery powered Quartz movement - not the unreliable mechanical movement
found in some cheap versions which slow down as the battery weakens.
Overall height 7.5", Base 6.5" wide, Clock face 4" diameter
For pictures please go to:
http://homepages.ihug.com.au/~dxer22/clock.html
New in box with instructions.

Folks
I have a sick S107 on the bench that needs both tuning dials
restringing. I suspect the main tuning drive is incorrectly strung at
the moment and the bandspread cord is missing.

The BAMA manual has no diagram. Does anyone have one they could email
me?
All help appreciated.
Thanks

Adrian

I restored an S-107 a while back and recall having the diagram. Maybe
it was in SAMS?
Whatever I had I must have sold along with the radio because I can't
seem to find it here now.
At any rate, I've got a photo of the inside of my set that shows a fair
amount of detail of the stringing. If you're unable to get the diagram
drop me a line and I'll send the photo. Better than nothing.

I have the 50 foot tower, it is right outside the shack window, so will be drilling the two small holes in the sill, then fishing through approximately 12" or 18" then replace the spacers to keep the distance between the leads constant. That leaves the remaining 98 feet outside of which I need a distance of approx 35 or 40 feet of the ladder line to reach my center fed 80m or two wires 66feet each leg. What are my options with the left over 50 feet (approx) of ladder line? Coil it up? Cut it? And what are the rules about keeping the ladder line away from the tower and steal guy wires that are not insulated? I only want to do this once now and first time using the ladder line, all suggestions appreciated, thanks.....

You don't really NEED all 100 feet. You might consider configuring your
setup as a G5RV antenna.
In any event, rolling it up is a bad thing.
You really should use standoffs going up the tower. For a 50 footer if
you tension the line between a top and bottom standoff and maybe one in
the middle that would be fine. I personally would shoot for at least 24
inches away.
As for "stealing" guy wires...careful about that!
:-)

Close, but there's a bit more to the story. As the other person alluded to, modes are actually a set of bracket pulses, spaced a number or microseconds apart amount corresponding to each "mode". The "squawk codes", binary count pulses imbedded between the bracket pulses, are decoded by ground or airborne interrogators so that the "code" can be read out on a radar scope, etc.

Military Mode 2 came about in the mid-50's with the advent of the APX-6 (later the APX-25) transponder and accomplanying KY-95 SIF (selective identification feature)encoder. Early Mode 2 was the descreet daily or mission code and preset on the ground and had 2 digits up to 77. On newer transponders, mode 1 and 3 codes can/could be set/re-set in the cockpit, to include altitude encoding with the modes now labelled as Mode A/B/C (and D). Codes now consist of 4 binary digits up to 7777. The military is the only entity authorized Mode 2/B. I don't know if mode 2/C and 4/D can be reset by the aircrews in modern acft, though. Well, enough of this. Any help??? de K3HVG

All too often that is the mark of a "collectible". They sold zillions of them becuase they were cheap so there is a lot of nostalgia money to be found in the marketplace.
Swan 350 was an atrocious drifter by todays standards, well by 70's standards too. People plonk down collector bux for junk rigs like the National NCX-3, the Swan Cygnets 270/260 but that has no correlation as to how good/bad the rig was. A $5000 Atwater-Kent breadboard set is hardly a stellar performer but i wouldn't sell it for 10 bucks because that is what it is "worth" as a receiver.

Is there anything left? Can the original movement be repaired? Can a new
movement be installed on the existing backplate? Is even the backplate gone?

2647. Need advice on TR-4 repair

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-25 23:17:32 UTC
From: William Warren <william_warren_nonoise@comcast.net>
Message-ID: <gGXic.34604$IW1.1560049@attbi_s52>
Source record: 24057

Thanks for taking time to read this.

My friend has a TR-4, which has an xmit trouble.

I can set the bias current to100ma, as per the manual, with no problem.

All tubes check OK. Receive is OK. I can peak the receive signal with the RF TUNE control.

However, when I change to CW mode and I close the key and raise the XMTR GAIN, the plate current doesn't move. (Yes, I'm using the "X" position on the sideband switch).

The antenna is OK: I checked it with a noise bridge, so there's a proper load.

Additional questions:

1. Should the Jones jack on the underside of the chassis have a shorting plug in it? This rig doesn't. Assuming the jack is to connect an RV-4, if the TR-4 was used with an RV-4, does it need a plug to work without the RV-4?
2. Does the TR-4 generate CW with a tone oscillator or by unbalancing the modulator?
3. Are replacement relays and/or switches available?

All suggestions welcome.

73, Bill

(Filter noise from my signal for direct replies)

Swan--the touchiest transmitter tuning but it does kick butt on SSB. Also
has the smoooooothest tuning with that dual speed knob. As you can tell, I'm
a proud Swan 500CX SS16 owner.

I have for sale some old carcasses that I hate to take to the dump. There is a Gonset GSB-100, Hallicrafters S-40B, Ameco TX-62 (with outer case as well as chassis), Henry Radio Tempo One, and a Heathkit SB-303. The GSB has one of the covers (bottom I think).

NONE have high value components left - all were used by me over the last 22 years in various restorations. But there are still lots of chassis parts, IF cans and the like. No dials, bezels, knobs, transformers. $25 takes all - PICKUP ONLY in Tacoma, WA - I probably can add more to the pile as I slowly dig out from under 30+ years of collecting & restoring before I move this summer.

Email ONLY if you can come to Tacoma, WA to pick them up. No shipping. All go as one lot.

Hello,

I am looking for some general info on the Eddystone 1650 receivers.
Specifically, I have an interest in the 1650/6 and 1650/7 models which
I own.

The model 1650/6 is intended for computer control and has only two
crystal filters installed (3kHz and 8kHz). It also has a 100kHz IF
output, however, I do not understand what this output was intended to
be used for. Was it for an external FSK demodulator?

Also, how does the 1650/7 model differ from the 1650/1, 1650/3,
1650/8, 1650/9 and 1650/10 models? Can someone shed some light on what
some of these numeric suffixes signify?

Any help would be greatly appreciated.

Thanks in advance!

Maybe. Or an external product detector or a panadaptor. IF outputs
are very useful for all kinds of things.

Different things are needed, depending on the material (first, do no harm).
Among the things I have found best for a particular "de-spooging" task are:

o The dishwasher
o Soap and water and a brush
o Febreeze
o Sunlight and fresh air
o Lacquer thinner
o Denatured alcohol
o WD-40
o De-Oxit
o Break Free
o Pledge
o Linseed oil
o Glade

Thats quite a combination, a Swan 500CX SS16 and a sweet sixteen
pill. Is that why Swan put that SS16 in there? They were recommending
it should drive a sixteen pill?

Damn.

It's a brand of tape recorder that audiophiles who can't afford
Studer-brand equipment _dream_ of, and drool when they dream. Now,
of course, tape gear is sort-of moot, unless you're an audiophile.
Nagra has gone digital, and that stuff is way cool, too.

The Nagra DII and its predecessors have been pretty much _the_
standard for field recording for quite a long time.

Try http://www.nagraaudio.com to see what I'm talking about, but put
on your bib first.

Hello fellow BA aficionados,

Golly gee I hate to put these guys up for sale. But alas, they
don't get used, and I'm moving this summer and I just hate
like heck to have to haul these things. Matter of fact, I have
a BUNCH of radios I need to somehow move out.

The R388/URR works perfectly in every way, and is a solid
9 out of 10. It's mounted in a DX-100 cabinet (the early
version, that's like a Bud cabinet). Everything works,
and I still play it regularly. Free turning dial, both covers,
and in very clean shape. Included is a Hammarlund speaker
that will go with it.

The DX-100 is the early version, so of course exactly matches
the R388 cabinet - they truly are like a poor man's Gold Dust
twins the way they sit. The face is pristine, and the last time
I had it on the air on CW it worked perfectly. I have not had
it on the air in 2 years. Inside is very nice, with just a hint of
rust on the chassis of a very superficial nature. All original
knobs, and the panel finish is as nice as they come.

Side by side, the pair match in size and look killer together
in their matching cabinets.

I CAN NOT and WILL not ship these!! Any requests for
shipping ("all ya gotta do is take it to Mailboxes Etc." and
the like) will simply be deleted. The transmitter weighs
too much for UPS, and the receiver when boxed would be
close too. Just too difficult to get safely to you.

So - LOCAL to Tacoma, WA buyers ONLY. You will have
to come and get them. I can email photos after I've confirmed
you're local. But even better, just come over and see and
hear them in person. I mean, if you're local, why not? While
you're here, you can peruse the zillions of other goodies I
have and make some offers if you want. Drake, Collins,
Heathkit, Hallicrafters, etc. etc. etc. I'm buried in radios,
and most of them just have to go.

Offered as a PAIR ONLY at this time, given the effort I went
to in getting them to match :-) I would like $850 for the pair,
and I'm sure they'd go much higher on Ebay. That's about
what I have into them. But come over and make me an offer
on these and other radios - the more ya buy the lower the

prices will get :-)

Thanks and please email for questions if you are local to
Tacoma, WA.

On Big Brother or American Idol?

You Know Crazy, Wild and even Obscene things Happen!

The Networks Dont Want you to See This!!!!
BUT WE SHOW IT TO YOU!!!

http://nnvpm.url.cjb.net

BECAUSE THE CAMERA WERE ROLLING the Shots just got
BANNED or CENCORED but we Have the SECRETS from REALITY TV

This is for real You Know You Want to See It!

More Erotic Than Temptation Island
Beyong BigBrother
Sexior than Survivor
Better than the Bachelor
Raunchier than The Amazing Race

http://tinyurl.com/2jysv
Nasty Obscene, erotic, dirty, insestuous, gross, indecent,
sleezy, impure, wild, erotic, pornographic, smutty,
risque, sensual, sexy.........
YOU NAME IT - THEY DID IT
ADD WE HAVE THE PROOF
EXHIBITION VOYEUR
The Contestants Did it all and the NetWorks Couldnt
Show it, it was Banned, Cencored there Secret
Now we show you what they were doing!!!!

Fetishes, Lingere, Lesbianism, Bi Sexual Experiments,
Foot Fetishes, FORCED SEX, Cross Dressing, Swinging,
jacuzzi group sex, threesomes, hi heels, rubber,
Whatever turns you on - they did it while they
thought no one was watching.

The Real Private Secrets from, Survivor, Bachelor,
Bachelorette, Temptation Island, Mole, Joe Millionare

Contestants caught naked, stripping, playing, sucking,
fucking

Did you know some contestants were lesbians some were
sluts, On one show a chick gave everyone a blowjob
including the camera MEN!!!!

http://tinyurl.com/2z4pw

Behind Closed doors, in changing rooms, dressing rooms,
in the bushes, private sets, closets, showers, lakes,
all sorts of places they thought the cameras were not
around, BUT THEY WERE and WE GOT THE SHOTS!!!!!

You might wish to have a look at the Premium-RX archives and/or to subscribe to the Premium-RX list. There's a lot of talk about the Racal 6790 there.

Hows that for a title?
I don't know what they are officially called but I'd like to find a few of those little frame gizmos often seen on BAs where you can slide in a little tuning chart or calibration card.
Fairly small ones would suit me...this is for use as a tuning guide on some projects of mine.

Thanks,
Bill

Any decent hardware store should have them.

I did a search using "brass label holder" and came up with a zillion hits.
For example:
http://nt.bnt.com/talas/menu.html?category=213

Clearly these are overkill for what you want, but it should give you an idea
of what is available.

Thanks Jerry, I've Googled myself to death and all I come up with are
the decorative type ones that you refer to. Thats why I was hoping for
something less ornamental for my radio panels like those on old mil gear.

Tnx,
Bill

P'raps. But sometimes it's the guy who produces a PRI radio show out
of his living room, like I did for almost 9 years, and/or makes
recordings of various performances as part of his income. I've done a
lot of that, too.

Either way, one needs broadcast-quality gear to make broadcast-
quality recordings. And I'm addicted to precision instruments anyway:
microscopes, survey equipment, big telescopes ... .

Although I don't remember how big or small they were, I recall that the
tuning units for the BC-191 (?) had similar windows. Look for TU-16 etc.

The best way to find the problem is to start at the audio output and work back to the antenna using appropriate probes to inject signals. At some point you'll get less signal than you should expect, the problem will be at that stage. Use a sam photofact to help you through the stages.

Get it working properly before making any modes, if it's a keeper make the modes, if it is an investment for future resale don't make modes.

I have a rather nice 32S-1, 516F-2, 312B-4, 75S-1 w/cw filter, 30L-1 w/ cables and books. Have extra 75S-1/312B-3 that could enter into the negotiation for "right" unit. Looking to swap (only) for similar condition T-368 transmitter or similar HF AM military xmtr. Prefer Mid-Atlantic area, of course, owing to transportation. Thanks!

2698. FS: Knight Speaker, Mikes, Keys, Meters and More

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

External Matching Speaker for the Knight R-100 Receiver.....$45
plus shipping
Cosmetically excellent with no dings or scratches. Logo is rough but
itï¿½s just a sticker.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

MFJ Electronic Keyer Model CMOS-8043.....$35 plus shipping

You are bidding on a MFJ Model CMOS-8043 Electronic Keyer with a
built-in paddle. This is a nice compact self contained keyer with a
sidetone that will work with direct or grid block keying. Works great.
Includes a new 9 volt battery.
http://members.cox.net/radiostuff9/mfjkeyer.jpg
http://members.cox.net/radiostuff9/mfjkeyer2.jpg

Electrovoice Model 623 Microphone - New in box.....$125
plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Turner S22X Crystal Microphone.....$30 plus shipping
The unit has been tested and works. Cosmetically it has pitting but has
been polished up and presents itself quite well!
http://members.cox.net/radiostuff9/mike.jpg
http://members.cox.net/radiostuff9/mike2.jpg
http://members.cox.net/radiostuff9/mike3.jpg

Eico 249 VTVM.....$25 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has
a small crack on the lower left side and their is a scuff across the
meter face. No probes but has a connector so you can build your own.
Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$35 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the
appropriate connections on the top of the meter. The ranges are: 3, 7.5,
15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent

condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Winslow Telegraph Key.....$20 plus shipping
http://members.cox.net/radiostuff9/winslow_key.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

2699. CR-88/AR-88 Piston Capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-28 02:08:22 UTC
From: Tony Angerame <tangerame@comcast.net>
Message-ID: <3cqdnYG6S7mXjxLdRVn-gg@comcast.com>
Source record: 23960

In a recent restoration project I noted that some of these in the RF section, mainly on the three highest bands are intermittent. i.e. I tap on one a few times and a previously dead band comes alive. It seems to last but I'd sure like to clean these up. Can someone describe the construction? They appear to be a slug (Made of a dielectric?) inside a ceramic tube with metal end caps. Should I use deoxit around the screw and twist a bit? I'll probably clean these in conjunction with an rf alignment.

Nice receiver BTW stable with great audio.

TIA Tony WA6LZH

Put it back original. Most "mods" can be done as add-ons that DO NOT
involve hole drilling or butchering. I'd make the mods fully reversible
if it was radio.

Message-ID: <pan.2004.04.29.00.02.29.590708@sc.rr.com>
Source record: 23963

I have recently come into possession of 2 ea. KWM-2A crystal paks. This is the vinyl sleeve containing crystals ranging from 3.4 up to 30 MHz (transmit/receive frequency). They are not 100% complete, as the ham band crystals are missing plus approx 1/2 dozen others. I can provide a list of those that are missing, plus I can provide digital photos. I will entertain offers.
I am selling these for the widow of a SK.
Thanks,
Larry W4LK

2705. Equip For Sale - Will be at Hosstraders

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-29 02:52:58 UTC
From: Denis Sharon <denis.sharon@comcast.net>
Message-ID: <9oidnZX4pa9k8A3dRVn-vg@comcast.com>
Source record: 23966

I KNOW I'll regret doing this but...

I've foolishly decided to sell the following, equipment. I'll be taking it to the Hosstraders event at the Hopkinton, NH fairgrounds this Friday and Saturday (4-30-5/1). Except possibly for the smaller items, I do not want to ship this equipment. Personal inspection and purchase at the Hosstraders hamfest or at my home in western CT would be best. Delivery to locations between NH and Washington -may- be possible.

Forgive the lack of prices; I'm not playing games but the decision to sell this equipment is a spontaneous one and I have yet to consider the dollar amounts. Pricing will be quite fair.

Write if you have specific questions. Alternatively you can call me at home at 203-431-8181. After leaving for NH early Friday morning, and while at Hosstraders, I may be reached on my mobile phone: 203-482-6626.

Heath Apache with SB10 sideband adapter - VERY clean, unmodified, unmolested Apache with Johnson low-pass filter and Dow antenna relay. This is a beautiful, operational transmitter. The SB10 is also very clean but I've never applied power to it so I don't know of it's operating condition.

Drake 2B - Good news and bad news. The bad news first: The leading edge of the cabinet has several paint chips. Also, it is not presently working very well. The good news, however, is that it is otherwise very clean and straight, is unmodified and has a bright, shiny chassis.

Lettine 240 - Fairly clean and completely original but in need of some fondling.

B&W 334A Metered 1000 watt dummy load.

Hallicrafters S-38C - Clean. The set screw threads on one of the small knobs are stripped.

Autek WM1 Computing SWR Meter - Excellent SWR bridge with direct reading SWR and forward power meters and remote coupler.

URM 25D - A wonderful U.S. Navy signal generator in very good condition.

HP608E - VHF/UHF signal generator of superb HP quality in good operating condition.

HP412A - Premier laboratory quality VTVM in close to new condition. Superb quality, beautiful piece of equipment and imminently useful.

HP201C - HP audio signal generator in exceptional cosmetic and functional condition.

HP5381A - 80 MHz frequency counter. Small, simple but very capable and accurate.

Regards,

Denis Sharon W1AOK
Ridgefield, CT

Its been over 40 years since I played with one but I don't recall the pistons being a problem back then but 40 years can do a lot, self evident. Have you made sure it's not something else. Try freeze spray and putting a hot soldering iron tip near the piston caps to confirm that they're the problem.

Chuck:

Thank you very much... that sure is hard to come by information! I'm happy to see that there was a logic behind the channel assignment numbering after all---maybe I can 'crack' the code behind the FT-243's.

I found this IEEE paper on the history of the quartz crystal industry in America that I would like to pass along:
http://www.ieee-uffc.org/fc_history/bottom.html

I hate to think about it... I spent a good bit of time in Brasil and never once thought about picking up a couple of monster quartz crystals that seemed to be sold everywhere---they sure would look good on the station desk.

Sincerely,
RG

2720. Re: CR-88/AR-88 Piston Capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-04-30 00:23:45 UTC
From: tangerame@earthlink.net
Message-ID: <ecb0f5f9.0404291623.7fe83adc@posting.google.com>
Source record: 23981

Thanks for the reply Henry. Good tips. What I found was that after
taking the
locking nuts off I could see what appeared to be lubriplate on the
shafts and rods. I cleaned them up with contact cleaner followed by
deoxit. Now they slide and work well. It's kind of spooky to realize
that some tech way back maybe as far as WWII applied that grease. Like
a voice from the past. Are you familiar with the AR-88/CR-88? That
wasn't you with the Lubriplate was it? Just kidding.
I fashioned a tool out of some brass rod stock I had on hand (fell
behind the work bench from a previous project but that's another
story.) This radio lines up pretty quick once you figure out where all
the L's and C' are.

Thanks,

Tony WA6LZH

Good tips. Thanks Henry. I think I figured it out. Looks like someone put grease i.e Lubriplate on some of the pistons. Cleaned it up and deoxed it works fine slides nice. Have you dealt with the AR-88/CR-88 much? That wasn't you with the Lubriplate was it? Just kidding! Kind of eery to think of someone doing that 50 years ago or more and I just ran into it. Thanks for you r reply.

I'd like to buy a 75S-3A or 75S3C Collins receiver. On eBay many are on sale
from USA suppliers.
I'm just in doubt because i cannot find clear indication on main power
supply possibilities.
Documentation found on Internet sometimes specify 110/220, other times just
110.
And i need a 220 capable unit, since i'm living in Europe.
Is there a way to detect clearly what is the effective power supply
installed?
I've the same problem also on the 516F-2 power supply.
The only power supply that clearly specify a dual voltage option is the
PM-2.
Is there somebody that can clarify my doubt?
Many thanks.
Mauro

Message-ID: <m8ykc.39755$NR5.21444@fe1.texas.rr.com>
Source record: 23991

Mauro,

The 516F-2 has a dual primary transformer. The primaries can be wired in
series for 220 volt operation. This is also true of the 30L-1 amplifier and
the 30S-1 amplifier. For the 75S-x receivers which are 110 only according
to
the manuals, you could try several simple approaches. Since it would only
draw 2 to 3 amps at most, a small step down transformer could be used.
Also, you could try something resistive and dissipating 250 watts that would
drop the voltage to the 110 range.

good luck & 73,
Phil
W5BVB

Hi all,
I'm attempting to fix a (National) Panasonic RF-4800 receiver for an old chap here. It is dead on the 2nd short-wave band set although it works OK on MF/LF and FM now. Seems like the local oscillator(s) isn't working which isn't too difficult
normally BUT unfortunately, he allowed the internal batteries to leak everywhere, so it could be a long job getting it right again. I don't mind doing this but I have absolutely NO info on the set, so a schematic or manual would be VERY welcome! Most happy to pay for a photocopy. The RF-4900/DR-49 set is very similar and a schematic or manual from this set would be OK as well.

Cheers,
Al Bolton, G4VSQ

Antique Radio Swap Meet at Spencer NC

On Saturday May 8th the Carolinas Chapter of the Antique Wireless
Association Inc. will again hold it's Spring Swap meet at "Spencer Shops"
The North Carolina Transportation Museum located in Spencer, NC.
This has been an annual event for almost 10 years at the train museum.
Antique Radio collectors from across the southeast will gather at the museum
to buy sale and trade antique and vintage radios and related equipment.
This is a Saturday morning event, starting between 7 & 8AM,
and it's all over by 12noon.

Admission to the event is FREE. Vendor setup is only $5.

The Carolinas Chapter of the Antique Wireless Association Inc.
(CC-AWA) hosts four of these Saturday morning swap meet all across the two
Carolinas throughout the year. Other locations include Valdese NC in July,
Greensboro, NC in October, and Columbia SC in January.
The CC-AWA also holds it's annual conference in Charlotte each year and
event that is attended by 500+ collectors from al over the US.

More information about the CC-AWA and it's events can be found
by visiting our web page at CC-AWA.ORG.
Or by contacting the clubs president Ron Lawrence,
POBox 3015, Matthews, NC 28106, 704-289-1166 (home) after 6pm.
or by email to: KC4YOY(AT)carolina.rr.com

Be advised that all 516F-2's are not alike. Some earlier, winged units
were for 110v VAC ONLY and did not have split primaries. Be sure and
check before buying, if you need 220v.

And a not very transparent attempt to ADVERTISE YOUR AUCTION without having the courtesy to put a FA: in it so those who object don't have to see your blatant advertisement.

No, it's NOT a Boat Anchor to my way of thinking but an older and not very popular receiver.

Free, for pickup only.

Ham Radio Equipment (Looking for a good Home): FM 2-way radio Base station.

Equipment is located in Berkeley California.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.
(Does this band still exist??)

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

Also some misc. electrical / electronic equipment.

Thanks.

Mauro:

Although the 75S-3 series receivers make no internal provision for 220 volt AC operation, there is another option in addition to those already mentioned.

It is possible to feed in the receiver's operating voltages from an external supply that furnishes filament (6, 12 or 24 volts), +185 and -65 volts DC. The 11 pin power plug used to feed in 110 volt AC also allows for external supply voltages to be fed in, bypassing the power transformer. You could build an external 220 VAC supply for a 75S-3.

A 2:1 step down transformer is clearly the simplest solution, and usually simplest is best.

Well, my 1965 book (winged) has the 110 only transformer. The 1968 and subsequent books all show the split primary. Greater Collins minds than mine will have to give you a serial number relationship. Having said that, it does appears that a round power supply will have the 110/220 capability. So, if its a round your interested in, I'd bet the ranch that it'll work on both input voltages.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

External Matching Speaker for the Knight R-100 Receiver.....$45 plus shipping
Cosmetically excellent with no dings or scratches. Logo is rough but itï¿½s just a sticker.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

National ACN Dial.....$35 plus shipping
This appears to be NOS and includes the instruction sheet but the coupling which mates with a quarter inch shaft is missing. That part could be removed from another National dial.
http://members.cox.net/radiostuff9/National_acn.jpg

Eico 249 VTVM.....$25 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping

This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Sat PM spent a wonderful couple of hours the the Antique Wireless
Asscn museum in East Bloomfield NY.

I came away with a couple of questions.

I had my hands on an operational R-390 for the first time. Quite
a radio! and I now understand the almost mystic reverence it inspires.
Question is...what contemporary solid state rigs deserve comparision ??
I realize lots of guys will want an oar in the water on this one.

I also fell in love with another radio. This happens from time
to time and mostly I ignore it. It wasn't the most beautiful radio in
the place (arguably the McMurdo Silver Masterpiece) but the rather plane
jane BC-348. What a chassis! and rather a lovely faceplate under the
ugly warpaint. Question is..how much would a guy have to pay to get
close to a reasonably un-murderified, decently operational, youngish BC-
348 *not* in rich collector restored condition ??

Check out the current generation of Watkins-Johnson gear. Demodulation is done with DSP, after digitizing the IF. Sensitivity is a little bit better than the R-390, and selectivity is just as good as the Collins mechanical filters, but with much less ringing and audible artifacts. Also there is an optional panadaptor system that will identify modulation modes and make some attempt at identifying signals, putting this information on the screen beside each peak. Comparing the system with my R-390, it is definitely a step up in convenience and sound quality although weak signal performance really isn't any better. Probably available for under half a million bucks although it may be considered a military supply item and require a lot of paperwork.

There are some okay commercial communications receivers... check the front section of the WRTH for some info. The big JRC unit is reasonable, though not as clean as the R-390.

I dunno, they used to be cheap hamfest junk that you couldn't give away a decade ago. Great sounding audio too. Absolutely useless for weak signal work, hardly usable for SSB and worthless in a pileup, but a great rig for listening to strong commercial shortwave stations.

The R-390 is also one of the quietest radios ever made. You get a lot of bang for the buck with an R-390. I've heard stuff on the one I used to have that the modern gear next to it struggled with. I would agree its the best tube rig ever. I've made a couple hot rod SP-600s that were hard to beat also.

I wouldn't go more than $150 on an average BC-348. There very common. Scott's right about the performance. There just a fun little rig. There one of the first BAs I worked on when I was a kid. You could pic em up at the Army surplus for around $25

That is where the weak signal performance comes from. It's not just the
extreme selectivity of the mechanical filters, it's also from the VERY
low noise PTO design. It's hard to match that with a modern PLL circuit.
It can be done... low phase noise PLL systems are out there... but it is
very expensive. Probably as expensive as the original Collins PTO was.

If you want to listen to the BBC, though, they are hard to beat. Excellent
sound quality on shortwave.

I am looking to buy the following ARRL Handbooks:

1950, 51, 52, 55, 57, 60, 61

Not looking for "museum pieces", but must have
tight bindings and be in generally good shape.
Softbound preferred. Money's tight, so if you
expect to get eBay prices, go sell 'em there.

73,
Dean K5DH

Dean,

Try the Belton swapmeet on May 22 or Hamcom in June....usually a fair
amount of books turn up there. As for eBay, the prices on handbooks have
been really cheap for quite some time in my opinion. This is for all but
the
rarer early years, 40's and down.

good luck & 73,
Phil

First, the circuit techniques for UHF receiver front ends and
transmitter PA's are totally different than those on 11 meters.
Conversion becomes wholesale replacement of about half of the radio.

Second, <<`ALL'>> CB radios must be type-accepted by the FCC for use
on the air. Unless you have the thousands of dollars for R&D, and
legal assistance to complete this, forget the whole thing.

What you are trying to do is tantamount to modifing a VCR into a
satellite uplink to jam television satellites. Can't get there from
here, No how, now way. Zip. Nada. The BIG goose egg.

Now you could use UHF commercial radios on the GMRS (former Class A CB
channels) with very little problem. Just change crystals or reprogram
the synthesizer in the radio, tweak, and you're in business. Any
competent two-way radio shop can do that.

I'd suggest you study a LOT more on basic electronic theory, and
circuit design before you post such an asinine question.

>
> Thanks

Dave, you're lucky because all you need is one crystal per frequency rather than two. The crystals you need are the "receive" crystals common in many older rockbound rigs.

Best thing to do is find these radios at hamfests, and just cannibalize the crystals from them and plug in. I think Drake TR22 or Kenwood TR7200/TR2200 crystals should work right on frequency. Others may be far enough off that they may or may not tweak onto frequency.

Or, if you like parting with your money, you can order crystals from several manufacturers. JAN Crystals, Bomar, Cal Crystal Labs, ICM, Sentry to name a few. These will set you back around $20 each or more, so this way will add up quickly over the value of the radio in very short order. Now you understand why even the commercial boys went to synthesized radios.

Looks like the bug has bitten someone else!

Yes, both the R-390 and BC-348 are great radios. Actually you
are just scratching the surface here. There is the R-390A, which uses
mechanical Collins filters, the ART-13 which is a WWII era aircraft
transmitter, R-388 Collins, SP-600, on and on and on until you run out of
money! ;-)

My all time favorite radio for SW listening is the R-390 (non A).
As someone else here said, its got an amazingly low internal noise
level, and a bit better sensitivity then the "A". I also have an FRG-7
which is really a very nice solid state SW receiver for the price.

Get one and fix it up. A BC-348 should be relatively easy to find in
unmolested condition.

Hi all ....

I just assembled a Heathkit ID-1790 Digital Rain Gauge. I found it on eBay - unassembled! - for $182.00 and believe I got a good deal. It's also a good match for my ID-4001 weather station. (See http://www.qsl.net/n4cro/weather.html Shack photo is at http://www.qsl.net/n4cro/radioroom.html) Someone had obviously been into the kit - in particular a necessarily plastic screw used to hold a transistor had the head ripped off - strain relief installed on AC cable - many parts in odd boxes, one a round plastic one for electrical tape, but I completed the kit with minimal scrounging and everything is working except the numeric display is dim on both long term and short term displays, even though the decimal points from the very same LED show fine. Only the 7 numeric segments are dim. The decoder/driver chips are six 14511 IC's (Heath part 443-699), one for each of the 7 segment, dual decimal point LED's.

Is this typical of this unit and does anyone have a suggestion how to brighten up the numbers ?

THANKS and 73!
Bill Stewart, N4CRO

2793. Stanwood swap?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-05 02:52:49 UTC
From: Wes Jacson <wjackson@rockisland.com>
Message-ID: <WPadnWbMvvSYygXdRVn2jg@rockisland.com>
Source record: 23888

Any one going to the Stanwood Wa. swap this weekend? I sure am.It will be my first time to a swap meet as a seller.So it should be a wild time.You all know how it is.A couple of hours of heavy trading early and then the part I like,the deals for the stuff people don't want to haul home again.And I always seem to find a couple of things in the dumpster.
Good thing I got a big garage and house.
I have learned alot about ham gear lately as a couple of people let me clean out the old gear they no longer used. Ham gear is not my usuall thing.But I am hooked on boatanchors like the Collins 388 that I got some good advise on from some of you.THANK YOU ALL. And now it works fine.
Well I just felt like babbling so I'll say goodnight.
WesJ.......

2794. Loudenboomer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-05 03:10:44 UTC

Message-ID: <176dnfLjLu6qxgXdRVn2gQ@rockisland.com>
Source record: 23889

I forgot I was going to ask advise on price for a
Radio Industries Inc.Loudenboomer II.It has a couple loose parts
unfortunatly.and may not be complete but is close from what I can tell.The
power supply is complete.
So I guess R.I. built these things after an artical that promoted the
design.Then Hallicrafter bought the rights or some such thing. And produced
it for a number of years.
I am going to sell a couple of other sets that I can price but this one I
can not find any record of one selling.So I thought I would ask the
experts.Yep thats you folks.
I am wanting to sell all the stuff I take so have gotten some advise on
where to put the prices to give good deals.After all I was given this stuff
so I hope to make some folks happy without being to foolish.Might be to late
for that already.
Any thoughts?
WesJ......

2795. Swap meet this Saturday in NC

Newsgroup: rec.radio.amateur.boatanchors

Antique Radio Swap Meet at Spencer NC

On Saturday May 8th the Carolinas Chapter of the Antique Wireless
Association Inc. will again hold it's Spring Swap meet at "Spencer Shops"
The North Carolina Transportation Museum located in Spencer, NC.
This has been an annual event for almost 10 years at the train museum.
Antique Radio collectors from across the southeast will gather at the museum
to buy sale and trade antique and vintage radios and related equipment.
This is a Saturday morning event, starting between 7 & 8AM,
and it's all over by 12noon.

Admission to the event is FREE. Vendor setup is only $5.

The Carolinas Chapter of the Antique Wireless Association Inc.
(CC-AWA) hosts four of these Saturday morning swap meet all across the two
Carolinas throughout the year. Other locations include Valdese NC in July,
Greensboro, NC in October, and Columbia SC in January.
The CC-AWA also holds it's annual conference in Charlotte each year and
event that is attended by 500+ collectors from al over the US.

More information about the CC-AWA and it's events can be found
by visiting our web page at CC-AWA.ORG.
Or by contacting the clubs president Ron Lawrence,
POBox 3015, Matthews, NC 28106, 704-289-1166 (home) after 6pm.
or by email to: KC4YOY@carolina.rr.com

Can you post more information about the time and place? There is also a radio swap meet in Portland on Saturday (see below). Portland and Stanwood are in opposite directions from where I live, so I would have to choose one or the other :-)

Regards,

Phil Nelson

>Northwest Vintage Radio Society is having their spring swapmeet on
>Saturday May 8th 2004 at the Salvation Army Rose Center, 1785 NE Sandy
>Blvd, Portland OR. Doors open at 09:00.

http://www.qsl.net/n7cfo/hamfests/SCARC04.pdf

Good Idea Phil. I guess it is a pretty big meet.They say folks come down from Canada for it.And all the tables get rented.So we will see.I have high hopes.
I guess Portland is a pretty good meet too.

2798. Swan 500CX

Can someone help me ID the following MURATA part numbers...
UOO2B(7 leads) & UOO1A(4 leads).....these units resemble the the resistor/cap units of forty years ago, but I don't believe that is what they are...also the O, could very possibly be a zero...can't really discern from the numbers on the units...it seems that someone in the group can usually come up with an answer...Thank You..

What is the current going through a given LED segment?

What is the Vcc on the LED display driver chip?

LEDs will go dim as they age, but more likely are bad capacitors pulling
the rails down. Check with the meter.

Hello everybody,

I've updated the list of the Drake R7A raffle. You'll find it at
http://home.online.no/~sindtorp/raffleDraker7a.htm

The latest update before The Dayton Hamvention will be May 8th.

140 of maximum 150 tickets have been sold so far, so you still have the
chance to get yours. BUT HURRY! ONLY 10 MORE TICKETS WILL BE SOLD !!

Take a look at the program for the Drake Forum too!!

Thanks for your support!

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Set of James Millen Wavemeters with the original storage case.....$60 plus shipping
The units and case are in excellent condition. The unit numbers and frequency ranges are as follows:
90605.......3-10 MHz
90606.......9-22 MHz
90607.......23-60 MHz
90608.......50-140 MHz
http://members.cox.net/radiostuff9/millen_wm.jpg
http://members.cox.net/radiostuff9/millen_wm2.jpg
http://members.cox.net/radiostuff9/millen_wm3.jpg

External Matching Speaker for the Knight R-100 Receiver.....$45 plus shipping
Good sounding and cosmetically excellent with no dings or scratches.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

E.F. Johnson Brass Telegraph Key.....$40 plus shipping
This is a nice E.F. Johnson Brass Straight Key mounted on a heavy non-original copper base. The words E.F. Johnson, Waseca, Minnesota are stamped into the front of the base of the key. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/efj_key.jpg

Signal Electric Telegraph Key.....$35 plus shipping
This is a nice brass Signal Electric straight key. The words Signal Electric MFG, Menominee, Mich are stamped into the front of the base of the key. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/key1.jpg

J.H. Bunnell Telegraph Key.....$35 plus shipping
This is a nice J.H. Bunnell straight key. The words J.H. Bunnell, New York USA are stamped on the shorting lever. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/key2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping

This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg

http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo
Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

I put the CW filter in my TS-520, but found it pretty "confining," and ended up using it only in the worst of conditions, preferring to copy a particular station by its pitch in most cases.

What can you do with it?

SSTV standards have changed so much in the last several years that
I've found my 400 pretty useless.

Doug

2818. FS: Free: 70W 6M FM Equip. Estate Sale remnants. SF Bay Area Pickup only.

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <932ff$409c02f0$42a74e3e$14835@msgid.meganewsservers.com>
Source record: 23811
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Free, for pickup only. This equipment is located in Berkeley California.

FM 2-way radio Base station.

This equipment can be re-tuned into the 6M ham band.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
The transmitter and receiver are on separate panels mounted
on rails in the center of the rack cabinet.

Rack approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

The other misc. equipment includes:

1. 4 variacs mounted in a ventilated metal box.
They were probably part of some light dimmer.
(dusty / dirty and in unknown electrical condition)

2. some Antenna insulators.
3. several power transformers.
4. some oil filled capacitors. (probably PCB oil).
5. Some selsyn motor transmitters/receivers. I don't remember the
voltage / frequency spec on these.
6. some small induction motors with fans.
7. some small relays.

Sorry for the vagueness but this equipment is at my fathers house in
Berkeley,

and I am in San Jose. We are trying to clear out the house to get ready
to sell it.
If no one is interested I will probably remove the tubes and meters, and
junk the rest.

Thanks.

Just a collectible really - they look cool in a shack, and harkens back to the 'good old days' - I have fond memories of my mentor using his Robot 'green screen' monitor with the 400 converter - slower than molasses to draw a screen, and absolute MAGIC! If I weren't in a 'get rid of stuff' mode, I'd snatch it up just to have it in my shack!

But as an SSTV rig, yeah - it's useless really. You can get STUNNING quality with modern converters into your computer, so the ol' Robot is just a relic of the past. And $45 is a really good price, IMO, but would be better if it had the monitor with it...

While I applaud your generosity, this would probably violate copyright law
unless you have the written permission of the copyright holder to do so.

Under US copyright law, Popular Electronics et al own the rights to all of the material in those magazines. You do not have any legal right to sell copies of that material! You can quickly find yourself in trouble if you try this - you've made it so high profile posting here that I'm sure you'll get a 'cease and desist' order from PE legal eagles (does not matter if the mag is still published - under US copyright law the comapany can be fully out of business but still own the copyright and can still sue you).

Good luck.

I'm not a lawyer by any stretch of the word - but - it seems to me that I have heard that Copy rights are only good for so many years and have to be renewed if the original owner intends to keep them "personal" property. Some one may want to check on that. The person wanting to do this, should have done his/her homework to see if it was legal before even going online with the idea. Call the Copy right office, a local attorney, etc. Someone should be able to direct you. Also, there may be some words of wisdom in the magazines themselves regarding copying and such.

Lou

I'd not argue with your point, but it does bring up an interesting point,
who owns the copyright?

Popular Electronics was published by Ziff-Davis. I gather they still exist.
The last issue of Popular Electronics came out in 1984 or so, though by that
time it had gone through a name change or two.

I never saw a clear indication of what it acquired, but at some point
Gernsback Publishing obtained the rights to Popular Electronics. I've
heard mixed things about whether they got past rights, or just the right
to the name. Eventually, they changed one of their existing magazines
to "Popular Electronics" but it wa not a continuation of the original
magazine. Eventually, that titled changed, to Poptronics.

Now, Gernsback went out of business at the end of 2001 or the beginning
of 2002. They didn't just stop publishing the magazine, they closed
down the business.

A few months later, Larry Steckler said he had obtained the rights to
the magazine, though again what those rights entailed was not specified.

I have no idea where that leaves the old material.

I don't have the URL handy, but someone was "archiving" old Popular
Electronics. Or was it just the Carl & Jerry stories? It would require
some digging. But they claimed (and I realize it's easy to make claims)
that they had obtained the right to do so.

You talking about ham radios? Did Yaesu make ham radios in the 50s? I had an IC-2F in the late 60s... I thought that was one of the first ham radios they made.... in VHF anyway, although I know there were some very nice HF rigs made in the mid 60s.

But your assuming that what we saw in North America was their earliest
product. I'm not sure, but it's likely there was equipment that only
appeared in the Japanese market (or in other parts of the world) that
we never saw. Or, it may have appeared on North American shores, but
under a different name.

The S-meter on my recently acquired TS520SE seems to be particularily lively. I recalibrated everything as per user manual but still the needle likes to slam against the right stop, especially with a good RTTY signal.

Do other TS 520's do that too or is there something to be concerned about?

Actually, I was on Okinawa at the time. The first 2M rig Yaesu exported didn't come out until 1968, the IC-2F, and their very first exported HF rig was the FT-100, I believe, which came out only a couple years earlier. Their very first ham rig probably came out around 1960, the FL-10, a single bander 40M Xtal controled TX. The Yaesu Musen Co. was apparently founded in 1959, though some sources site much later.

Do a Google search on Yaesu history. It can be interesting.

Hah! I gotta correct myself! I thought you were looking for Yaesu gear made in the '50s. I wasn't aware of the "50" series when I first replies here. I am now. Made in the mid 60s, and pretty neat looking stuff. Sure advanced for its times. Good luck in finding some. From my WEB browsing, it looks like Australia and Japan would be your best bet.

2848. FS: Lots of Stuff going to Dayton

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-09 04:31:30 UTC
From: k9uwaREMOVE@THISarrl.netSTUFF
Message-ID: <Cuinc.54693$lk.4073118@attbi_s53>
Source record: 23806

All of this stuff is going on a "One Way Trip" to Dayton....
Most of it is from a couple of SK's in our area ... and I am
stuck moving it on for the Widows....

Flea Spaces at Dayton 1762-1768 .. thats close to the west end
food tent!... All that neat stuff thats not on my Diet!...

Mint Perfect Clipperton-L Dentron Amp... asking $400 yes it covers 160

Very nice Kenwood 520 w/ Kenwood MC-50 Mic $275

Kenwood AT-200 TUner $160

1 D-104 regular mic $25

1 D-104 Silver Eagle $45

Turner Super Sidekick Mic $100 ... has 4 pin plug on it for Kenwood

Old KDK-FM2030 ..2 mtr rig.... $20

Ham-4 Rotor ..was rebuilt 2 years ago by CATS $175

Kicker 500 Watt SWR mtr... $25

Drake TR4-C asking $250

Ameritron remote antenna switch RCS-4 $100

Yaesu FT-900 w/AT ... nice little 100 watt HF rig asking $750

Alpha 87a ... this one is mine... I have decided that I don't need
two of them... I am the original purchaser of this amp... it works
great.... complete with Eimac tubes... the originals... still work
great... brand new ones are $6500 .. buy this one for $4500 ...
It has had the Firmware Upgrade so that it actually does retune itself
while your operating.... really neat $95 addition ... the new ones
all have it..

MFJ Versa Tuner V (5) ... 3KW tuner with roller inductor $175

Yeasu FT-2500M ... nice 2 mtr mobile radio.. looks almost like
a new one.. $135

Diawa CN-103 Cross Needle Wattmeter/SWR etc... model is CSS-1 $80

Kenwood PS-50 power supply ... $90

Hallicrafters SX-122 ... this one is mine... it is MINT... and 100%
Restored... works perfectly... Restored means that all the old

capacitors.... all of them... have been replaced with new parts..
also any out of spec resistors ... and aligned using calibrated
equipment... perfect radio ... $450 or else it goes to Flea Bay
when I get back from Dayton...

2 ... Dunestar Auto Bandswitching Bandpass Filters model 600...
new ones are $339 from Dunestar .... buy these for $175 each ...
these are mine.... no longer contesting using 2 stations as Multi/Single
category so don't need them... They auto-switch with my Icom EX-627
antenna switch and the 2nd station had a Top Ten Auto Antenna Switch
on it... see next item...

Top Ten Devices Auto Antenna Switch .... currently setup for Icom
radios ... it can be switched to operate on any of the radios that
have auto switching info coming out of the radio.... $80

Nye Viking RFM-003 Peak reading Wattmeter 3 kw $375

Icom IC-17 ... this is the controller between your radio and your
computer for band changing etc... works with all Icom radios $90

K1EA DVP card .... with cable for Icom radio... was wired to my
IC-765 ... this is a "Memory Voice" Board runs with CT contesting
software as well as I am told other types of contesting software
and logging programs... $100

Whole bunch of our "Wooden Radios" .... Antiques .. restored to
original factory specs ... Pre-WW2... Zeniths, Philcos, RCA's etc!

See our Website for our Radios we restore etc...
www.JohnJeanAntiqueRadio.com

Several of my buddies are bringing some nice Collins, Drake, Hammarlund
radios etc... Flea Spaces 1762-1768

Available for pickup only in Fort Wayne....Well...actually Leo, IN
.... close to Ft Wayne...

Rohn HDBX 48 foot tower.. this thing is perfect condition..about
4 years old... has tilt base with it and thrust bearing Asking $300

Mosley TA-33-M Tribander.. this is 2 years old... $100

HyGain TH-6DXX ... Antenna is in good condition... had the stainless
steel hardware kit installed on it about 10 years ago... only
partially dis-assembled and all elements marked for quick re-assembly.
Asking $200

Another HDBX ... this one a 64 footer ... tower is in need of a
paint job ... and all the bolts should be replaced... couple of the
rivets in the top section are broken... $75

Watch it on the AutoReply E-Mail ... correct e-mail is
k9uwa at arrl dot net

73.. and see U in Dayton

I once tried to use a cheap scale for estimating shipping.
The constant results were that I either ate the excess costs
or I had to send change back to the buyer.
With four kids at home, I just can't afford the outrageous
price for a "postal scale."
Most of them are stupidly expensive and, moreover,
limited to small packages.
If you have had this problem, go to your nearest "Sam's Club"
and look in the office supplies section.
There is a digital scale branded "Royal"- comes in a red box.
It will weigh packages from less than a pound up to 350 pounds.
It costs $48 here in Dallas. I've been weighing stuff with it
for a few months and it's spot-on with the Post Office.
One caution: it is not rugged. It handles normal shipping
chores without problems, but don't throw it on the floor
and keep it away from the kids.
Jumping on and off it to watch the numbers wink
will mean another trip to Sam's and another $48.

Most stuff I ship is under 30 lbs so any of the baby scales work great. They normally can be picked up for $10 to $15 at Goodwill or even antique shops. For bigger stuff I have an old antique scale that I bought someplace for almost nothing. Usually I get within a dollar or two on most items with some maybe over and some under. I usually always add a couple of dollars to the total anyway to cover my misc shipping costs. Gas, boxes, tape, etc so in the end it all works out. I have never had anyone say I was charging to much for shipping. I also usually give the buyer his choose of shipping companies except UPS who I will not use period.

If your shipping ask the buyer to get a FedEx number. You don't have to
do anything just give FedEx the acct number and away it goes. They also
help out with customs, so it's easy to ship out of country. (they'll
check your paper work if you ask)
UPS won't hand out numbers easily but FedEx does.

I'm looking for 2 General Radio Knobs.
These are main tuning knobs that are 4 inches
across the metal skirt, with a fairly large
Bakelite knob.
Here's the URL to a web page with some
close-up photos.
http://radioheaven.homestead.com/GRknob.html
I would be very interested in finding these knobs
to complete a restoration project.

Thanks for your help.

Hi, looking for a R-390 (or 390-A) in the Texas area so I can pick up and avoid shipping. Belton TX swap is coming up this month on May 21st/22nd so thought if anyone is heading that way with one I could hook up before hand and pick it up there (or whenever). I don't need a pristine/refurbished unit b/c I don't mind putting some work into radios myself. I already have an extra case so I doesn't need to necessarily have a case. Let me know what you have or someone you know has. Thanks, dave austerman, N5WNM, San Antonio, daveaust@pol.net

I HIGHLY doubt it's even possible. UHF is so far from 11 meters in the radio spectrum that aside from scrounging parts, one cannot simply convert a UHF x-cvr to 11 m or vise-versa.

He's probably convinced that it's possible because he knows most CB sets
have UHF coax connectors.

It may interest some to know that the "UHF" coax connector does not mean
Ultra High Frequency. It actually comes from the US Military (and probably
NATO) designation: Universal High Frequency Coaxial Connector. In this sense
"Universal" means it is found on "practically all" military HF rigs.

References?

This sounds more like a retroactive acronym.

NATO didn't even exist when the UHF connector series
was first made.

The UHF connector was designed as a mate for RG-8 coax. It
was found on virtually all radios designed to drive RG-8
during that era. Typical examples of WWII vintage non HF
radios that used UHF connectors were the ARC-1 (120-150MHz),
SCR522(108-150MHz), BC-645 IFF (VHF/UHF) ... much later, the
UHF connector was used on the ARC-27(220-400MHz), URR-13/35(220-
400MHz), all two way base station radios in the 400-500MHz
bands...

I am inclined to go with the "they just didn't know any better"
explanation.

73,

Chuck Harris

Of course. Also, the BNC connector was originally devised for military applications during the war because existing connectors would rust badly under field conditions. The improved BNC was called that because the Base Never Corrodes.

The SMA connector is just too small to be able to carry any reasonable power level, which is why it got that designation. SMA stands for Stops MicroAmps.

I'd tell you what the designation on the N connector stands for, but it's obscene.

Which was along the lines of my post to this a few moons back. He may have
been referring to the UHF Citizen's band - which this conversion may have
then be possible from another UHF range. BUT to take it to 26-27 MHz, I
don't think so!

Lou

Under US copyright law of 1978, the copyright stays
with the creator of the material for his lifetime plus 50 years.
Even if a business has gone under, the corporate 'name'
(a person under the law in a great many ways) still owns
the copyright for 50 years 'after its death'. Works produced
PRIOR to 1978 are good for only 28 years from date of
creation, unless renewed. But it is the responsibility of
the reissuer to confirm ownership before using the work.
Just saying you 'think' it's in the public domain will hold
no water in court. You can request a copyright search from
the Library of Congress (they charge a nominal fee for this -
$20 per hour last time I checked) or simply locate the
principals of the former publisher and request permission in
writing.

No gray area here - just the way it works. I'm a writer
and deal with this stuff daily. You can look it up - do
a google search on 'copyright law' - it's all EASY to
find and easy to confirm - there really is no need to guess
and wonder in the era of the internet.

Thanks for your response, Gary.
I am well aware of the price of crystals, which is why I want to trade rather than spend. The suggestion you gave sounds good.
By the way, I am VE7HDC and live in Vancouver, I see by your call that you are probably in Washington State. Maybe I could work you. I am on VE7RBY (145.350 -600) often or I have HF capability too. There is a net on VE7RBY at 20:00 local time Monday. '73

Does anyone remember the fabled Q5-S9 receiver profiled in QST in the late 50s (I think) by reviewer Larson E. Rapp? It had features far beyond its time.

Couple things gang.

The original note was likely a Troll. It wasn't a serious request for information. I don't know the 3MOJ story but there's something odd going on, flame-war, troll baiting, etc.

The use of "UHF" might be a typo, where the intent was "HF".

The other possibility is the freebanders have a different terminology from standard radio talk.

VHF and UHF in freebander, bandit CB lingo isn't 100 mhz, 500 mhz, etc. VHF and UHF are band segments just above 27 mHz and below 30 mHz. .

2890. Clegg Interceptor "B"

Hi,

See these nice items and others in the outside flea market area - booths 2966-2967.

R390-A. From the estate of WB1Z. Restored by George Rancourt, K1ANX. New top covers, nice condition. $450

Hallicrafter S-85. From the estate of WB1Z. Good condition, original manual. $75.

Complete set of Communications Quarterly. Excellent condition, all 37 issues from the Premier issue through Fall 1999. $50

QEX - Mar/Apr 2000 through Mar/Apr 2003. $20

Electric Radio. Feb 2001 through May 2002, 15 issues plus Dec 97. $10

Plus see tiny video cameras from United Wireless that transmit on either ham or Part 15 bands. From $129. See the cameras at: http://www.universal-radio.com/catalog/widerxvr/23443333.html.

Master & Visa accepted.

Thanks,

Jim & Jim
W1EQO and KK1W

See you in Dayton!

I have some crystals that may work, must send me a freq calc for them (I'm not familiar with the TR33's needs) and freqs needed. $5 each plus shipping, guaranteed to work when leaving here, but I do not warrant them once installed. I only warrant parts "I" install. E-mail direct.

2904. R390A, S85, Heath HO10 at Dayton

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-12 03:59:23 UTC
From: Jim - KK1W <kk1w@arrl.org>
Message-ID: <10a388shgimu99c@corp.supernews.com>
Source record: 23765

See them at booth numbers 2966-2967.

R-390-A
Restored by George Rancourt, K1ANX. Excellent physical condition, is not working properly. New top & bottom covers. Reprint of operating manual. $450

Hallicrafter S-85. Good condition, working, original manual. $75

Heath HO-10 Monitor Scope. Good condition, working, new HV caps, original manual. $75.

All the above is from the estate of WB1Z. The 390 is in super shape, was supposed to be working but when I tested it tonight it didn't. Lights up, meters move, that's about it. Knowing these beasts there is probably not much that can't be fixed easily. Super shape, clean, silky smooth tuning.

Thanks and drop by the booth, even if it's just to say hello and twist the knobs!

Jim, KK1W

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 16th 2004
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

2914. Anchor's For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-13 16:43:41 UTC
From: tangerame@earthlink.net
Message-ID: <ecb0f5f9.0405130843.e3b3893@posting.google.com>
Source record: 23775

I have several good old boatanchors that are surplus to my needs. Too many anchors such little time. I won't ship so this is a local San Francisco Bay Area deal. Although I can meet people half way as far out as the Central Valley.

NC-300 Works well, Panel good, cabinet needs paint. Replaced second convertor coil with non stock unit. One non stock knob. 7-8 out of ten. $125

HQ-150 Works but someone tried a product detector mod and tore out the agc. Need to have about 4 resistors and a couple of caps reinstalled on the original tie strip. I estimate about a one hour job but well you know. Physical conditon is about an eight with a nice cabiniet and front panel. $100

AF-67 Nice little "Poor man's Ranger". Replaced the interstage af transformer wiht the unit from Antique Radio and it worked fine on a dummy load. Full output and modulation but I never recapped or swept the audio for that "Full fidelity sound". Looks good about an eight or better. No power Supply. $90

My taste in boatanchors has gone through phases and I now colect R-390(a), SP-600, AR-88 and SP-200 and thinking about some Collins so I need to unload some of the less favorite stuff. I'll talk about price especially on a "Package" deal. If you'd like I can take some digital photos and email them.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Heathkit Transistor Radio.....$60 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittantly.

http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has
a small crack on the lower left side and their is a scuff across the
meter face. No probes but has a connector so you can build your own.
Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$35 plus
shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they
were in Philadelphia so this must be pretty old! I would guess that this
is from the 1920's or 1930's. According to the instruction card, "this
instrument is for checking potentiometers and thermocouples. It can also
be used for checking millivoltmeters and other sources of electromotive
force within its range. The range of this instrument is 0-71 millivolts
DC." The instrument itself appears to be in excellent condition. The
instruction card does have a water stain and and leather handle is
coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg

http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$30 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.

Hi,
I just picked up a Realistic DX-100 at a ham fleamarket. I realize that it is pretty basic and no great hell, but it bought it to giveaway to an immigrant family that I have been helping out. Can anyone provide me with the scans of a service and/or user's manual. It's pretty good as is, but the calibration is off a bit and I'd just like to bring WWV into line!

Thanks in advance for any assistance.

2926. Hickok 547 Tube tester roll - help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-16 00:45:07 UTC
From: Simon <vk2eii@REMOVE.yahoo.com.au>
Message-ID: <40a6b745$0$2302$61ce578d@news.syd.swiftdsl.com.au>
Source record: 23787

Hi

I recently acquired a US made Hickok 547 tube tester. It is a nice unit that works well, but the settings roll chart is dated 1954, which means that it is not easy to test a lot of the 1950/1960s B7G and B9A tubes. Unlike the 600 series, this particular model seems quite rare and I wonder if anyone can advise whether later updated rolls were made for it? If they were, can someone advise me where to get one or alternatively where the data can be downloaded from the internet to print out and attach to a manual?

Thanks

Simon

2945. Marconi TF1245 Q Meter - help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-17 23:31:49 UTC
From: Patrick <transactoid@rogers.com>
Message-ID: <FXbqc.54292$0qd.42710@twister01.bloor.is.net.cable.rogers.com>
Source record: 23705

So I managed to get ahold of a Marconi TF1245 Q Meter. After doing some research on the internet, I found out that it needs a separate oscillator unit. I do not have this. I tried using a regular ol' signal generator but I was unable to get a response on the "Q MULTIPLIER" panel (you're supposed to increase the amplitude on the oscillator until the needle swings to the "x 1" position). I'm using the low frequency input, with the freq.gen set to 100Khz. Further reading has suggested it may be an impedence matching issue; and I have no idea what voltage the unit is looking for so perhaps my freq.gen can't go high enough.

If anyone could give me some hints on how to get this thing working I would be most appreciative.

(Of course, the thing was being junked, so it might not work in the first place...heh...although it does "come alive" when turned on and is otherwise in perfect condition inside.)

Thanks a lot

Message-ID: <rUpqc.2385$_V4.1743@read1.cgocable.net>
Source record: 23709

Hi again,

here is my next problem, hope you guys can push me in the right direction.
I had to put the amp on the back burner. Now, my transceiver has no RF
output. It will receive normally, when I transmit or key the key to tune the
tuner, there is nothing reading on any meters or transmitting. The relays
are clicking just as normal, I was talking away most of the day as normal on
20m but then shut it off normally, and came back after an hour break, turned
it on but only receive works normally.
I checked the 13v supply, there is 13volts there when receiving. Then if I
lock the mic, and check for the 13volts, it is there, the high 13volt. I
haven't checked the lower pins yet.
Any advice?
thanks

Bob

Hi -
I need to replace a HV relay in a Gonset power supply. The original is MIA. The relay switches in the 600V when called for by the RF PA circuit. What available relay would do the trick on the cheap? Could someone please suggest a mfr/model?
I have a T/R relay from a junked Clegg 22'er and a couple of small relays from an old Westinghouse FM transmitter, but the gaps are VERY narrow and I don't know if they would handle the voltage. Any advice appreciated.

2951. Bought old CB amps for parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-18 19:06:35 UTC
From: Jimmy <Gfender@carolina.rr.com>
Message-ID: <%8tqc.27455$zq4.1860531@twister.southeast.rr.com>
Source record: 23711

Bought a literal bushel basket full of old CB amps for near nothing. Many are tube type mobiles that use inverter power supplies. I am trying to figure out what frequency the power supply oscilates. My plan is to get some of the power supplies up and running using a TL494 and Power FETS. What kind of transistors were used in thes things. Some of them look lie they were stud mounted and others are obviously TO3. Any help would be greatly appreciated.

Thanks, but I already have a more modern rig with VFO and 20 channels as
well as a handheld. So I am mainly interested in trading.
The requirements for the Drake are that the crystal's marked frequency be on
the frequency at which it operates. I.e. to operate on a repeater which
outputs on 146.940 MHz, you need a 146.940 MHz crystal. The offset for the
repeater input (146.340 MHz in this case) is derived from the receive
crystal in a manner that I don't have the details about, but doesn't
require a transmit crystal.

If I were building such a thing, I'd use darlingtons myself. A frequency
counter will tell you what frequency the relaxation oscillator is running at,
though you should be generally aware that it will drop when the load is put
on. Probably in the 15-50 KC region to use cheap magnetics and semis.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

National Type ACN Dial.....$40 plus Shipping
http://members.cox.net/radiostuff9/nat_acn_dial.jpg
http://members.cox.net/radiostuff9/nat_acn_dial2.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$60 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittently.
http://members.cox.net/radiostuff9/heathkit_xstrradio.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio2.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio3.jpg

Triplett 800 VOM with Manual.....$50 plus Shipping
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Western Union Legless Telegraph Key.....$35 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$40 plus Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping

This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$35 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$30 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg

http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo
Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

2963. WTB: power cord for old RCA WR-67A test osc

Newsgroup: rec.radio.amateur.boatanchors

I'm looking for a replacment power cord for an RCA WR-67A Test
Oscillator (signal generator). On the connector end, it resembles a TV
"cheater" cord, and has a standard two-pin AC plug on the other end.
(Modern cheater cords don't have the desired pin spacing.) The pins are
approx .125" dia spaced approx .333". Overall the connector is approx
.82" x .43". I believe that the same connector was used on several
different RCA units.

Neither the original manufacturer (Belden) nor the subsidiary they sold
their power cord business to (Volex) have it or can suggest a source.
I struck out at RS and my local parts place.
So, if anyone out there has such a cord, or a parts unit with cord for
sale, please speak up.

Here are pictures of what I need.

Hi...

Can't tell what that is, or what the pin arrangement is
from you photograph, but a long while ago I remember
having something that looked like it wanted a cheater
cord but the spacing was different.

Turned out that the power cord from my razor (Phillishave,
in this case) fit perfectly, and it was a cinch to buy
one of those. :)

Take care.

Ken

I don't know if your problem is constant or intermittent.
There are 1001 things that can cause this but I'd first check the PCB
pin connections.

These TR7's are aging and I've found oxidized pins on the boards start
to cause a lot of problems.
I'd pull each PCB and spray the pins with De-oxit or something
similar.

Doug

Hi

If you need finals, just change them yourself. Directions are in the manual, you only need to neutralize. It is easy to determine if your finals are weak. Power will drop off as frequency increases. You may get 150 watts out on 80 meters but only 25 on 10 meters when you expect 100. Feel free to ask me or the group for help.

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Pair of 1N2637 - Solid State 866 Rectifier Replacement.....$60
plus shipping
These are NOS. One has a box, the other does not. Date codes are a
couple of weeks apart.
http://members.cox.net/radiostuff9/1n2637.jpg
http://members.cox.net/radiostuff9/1n26372.jpg

Electrovoice Model 623 Microphone - New in box.....$125
plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg

Most of the transistors with the stud mount were PNP germanium in the
TO36 case. These worked as a miltivibrator, with the HV transformer
primary as the load. It depended on a feedback winding for operation.
With circuit tricks you could have the collector (case) at ground
potential.

These would oscillate in the neighborhood of 3-10 kHz, and usually
emitted a soft squeal when operating.

most of those amps were built as cheaply as possible, and I'd
seriously question the value of any of the componenets. A good source
for T-powered HV supplies is surplus two-way radios, such as the GE
Matr Pro, or Motrac.

Hmmm. There were (and still are) a lot of stud-mount SCRs. That might
seem a good choice for a cheap multivibrator circuit, if a little slow.

There may not have been a receiver, a lot of early aircraft wireless was
one-way, for reporting fall-of-shot for artillery etc.

Yes but not in the plane. These were used for spotting
and were only one way transmissions.

I had a BC-14A made by Deforest that I sold to a collector
that lives in Italy. Too bad for me, it's wroth about 3 or 4 times
what I sold it for then.

2995. Relays on the Yaesu 980

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-23 05:31:04 UTC
From: Joel <Joel@cyberbest.com>
Message-ID: <wGWrc.106$OC6.42@fe25.usenetserver.com>
Source record: 23606

I keep hearing about cleaning the contacts on the relays on the Yaesu 980. I have an intermittent problem that I'm not sure if it's a relay or not. But because of the age of the radio, I figured it might not be a bad idea to pop off the plastic top and clean the contacts. The problem is I don't see an easy way to get inside the plastic cover. I don't want to spray anything inside the relay, I would rather burnish the contactss. Anyway, looking for any words of wisdom, So far, I have been leaving sleeping dogs lay.

In the short term, consider using a couple of Molex female connectors --
just the metal pieces -- and molding the "plug surround" out of epoxy
putty.

This is a small black solid state general coverage receiver that could be related to the Drake SSR-1 according to one site I found thru Google on the groups.
http://home.comcast.net/~maghakian

The unit that followed me home from the Belton Tx hamfest seems to work but not real good. Made in Japan.
I wonder if anyone out there has anymore info. It.s not in Fred Osterman's second edtion.
tnx
Hank WD5JFR

Another Belton hamfest tagalong. I wonder if anyone has the GR commercial
number for this unit or any specs? It's a nice looking unit with a
beautiful precsion gear dial. I'll post a pix to
alt.binaries.pictures.radio, and then start it on the Variac.
tnx
Hank WD5JFR

This is like his 4th or 5th complete stripping out of Heathkit rigs. "Ready to install
part - removed from mint condition fully working rig" - words to that effect.
I mean what the HELL? What next - buy up Collins and strip them out?? So you
can make $40 more than the radio is worth.... it's like this guy thinks he's clever
and come up with a 'new idea' - strip mint radios for a 25% extra profit.

Go to the link above, then click 'view sellers other auctions' - you'll see what I mean.

Just irritates me and I wanted to rant. I know the argument - it's his radio and
he can sell it / chop it up as he sees fit. Yeah yeah. Still hate it.

JOE

It really is too bad. I didn't count how many rigs in his list of items for sale have gone as parts, but it was a lot.

On the other hand, he must be filling a need or the items wouldn't sell and he would go broke. It's a mixed bag.

Don

Well, it makes some sense to me.....the parts from one rig can improve or repair several. Besides, it is his rig and if he wants to part it out to sell so he
can make more money out of it, power to him.....this is American free enterprise
in action. Maybe you would prefer he have to apply for a government permit before he could disassemble it.

73, Phil

Not that I agree with stripping a "working" unit apart to sell the parts, but I have seen cases where an item was "close" to working condition, but to put money into it to get it to work was more expensive than had the person stripped it and sold it for parts - as the parts for that particular unit were hard to find and not necessarily cheap. The only time I've stripped working items to sell parts from, is if I could not sell it whole, or it was too expensive to ship and I found people interested in buying the parts. I did quite well that way. Maybe this guy "feels" he can make more parting it out than it is worth! This guy may have an axe to grind.. Maybe he doesn't like Ham and this is his revenge - or as another stated, his therapy. Who knows what may be the driving force......

Well, I can't say I've sensed a shortage of HW-101s in ANY condition. I'd hate to tell you how many get left in the dumper at the hamfest after NOBODY buys them. The SB-303 is a somewhat different story.

I doubt that anybody is going to get rich doing this.

Too, try to sell a "working perfectly" rig that has had holes drilled in it or some such. Most collectors will pay more for good cosmetics than they will for working units. The electronics are easy to fix and out of sight, but a cabinet that's all beat up and full of holes is a hard repair.

I can understand the emotion. Seeing something perfectly good ripped apart sets my teeth on edge as well. I guess we all have to console ourselves with the idea that those parts will go on to make any number of 'not working' sets 'perfectly good' again...although given an option, I'd think that an original--not cobbled together with parts from donor sets--would be worth more.

Another acquisition from the Belton hamfest that I'm looking for info on. It's engraved "HIGH IMPEDANCE PREAMPLIFIER MODEL AW-203-1" EO Electro International, Annapolis, MD. Someone printed by hand on it; "150 KHz - 12 MHz". It has a four position switch labeled Off, Recharge, Rod, Loop and an output BNC. It's been fitted with what looks like a non-original whip. There's no provision for a loop or rod and I'm guessing that there was a rotary joint to replace the loop. Any info appreciated. Pix posted to alt.pictures.binaries.radio.

And the next time you write to my personal E-MAIL, leave a valid address for my reply. Share your comments with the group. Yes, maybe he is trying to put food on his table. No one would knock him for that. Just seems a bit odd to tear apart "working" units. That is all I think anyone is trying to say. There are reasons, I've had them as I've alluded to... It just seems to by pass common sense though - in many cases.

Etc.

Joe, let me ask you this: if by sacrificing one rig he can enable the resurrection of a dozen Heathkits which otherwise would have been consigned to the scrap heap, wouldn't you think that would be a *good* thing?

That was not a rhetorical question. I'd be interested in your answser.

Ripping apart a MINT radio (I've been watching this guy for months - he had
a MINT SB-303 back a few months ago) is absurd.

Defend it all you like. I still think it's just plain profiteering and
destroying
a limited resource.

Maybe those who think this is right will allow hunting of bald eagles
too....

"I" am not defending it "entirely", but if the man pays for it, it is his to do with as he pleases! As the anonymous one wrote to me, He is putting food on his table by doing so. That is HIS words, not mine. I only tore my shit apart because it was TOO BIG to ship and it was more acceptable to be sold by parts, which I DID do. ALL sold in a couple weeks. It was a USED item though. IF the guy feels it will bring in more to him dead than alive, that is his prerogative. It doesn't mean I, you or anyone else has to agree or disagree. It's his shit, he'll do with it as he pleases. Our opinions don't really mean dick in the end.

3019. Information on HP Power Cord

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-23 22:18:59 UTC
From: Joe Curry <jjcurry@sbcglobal.net>
Message-ID: <nr9sc.72288$N86.33084@newssvr25.news.prodigy.com>
Source record: 23629

Greetings:

I am looking for some information on the three pin power cords that were used, among others, by HP.

On one end is the standard 3-pin 15A 120v line plug; on the other end is an oval body with three round sockets inside it. It looks like the old TV cheater cords, but has a third, ground pin.

Does anyone know the name of this connector?

Does anyone know where I could obtain a few? Mouser doesn't have them.

Thanks in advance and 73,

Joe
K3ICO

I recall someone saying Amphenol makes them and you can get them at Allied
at a reasonable price. Some guys are trying to sell them at swapmeets for
$5 and ebay higher than that!
Check
Allied out.

There seems to be a very limited resource instide your head
there Joeboy! The fact remains that these are his radios and
he can dump them in the ocean if he wants to. If he wants
to make a bit of money by taking them apart that is his choice.
Now go crawl back into your hole.

Drake R-4C Receiver
Hasthree filters on back of radio.
and a few crystals on the back as well.
It has a noise blanker inside of radio also.
Looks very nice. The Front is great!
Receives very nice.
Please make offer and if it sounds good, I will sell it to you.
Please don't ask how much do I want, Just make an offer.
Ready to sell.
ritchi50@optonline.net

Killing Bald Eagles is a completely different issue. We are talking old
electronic junk in whatever form it is in that is all it is period. If
you think it is something other than that then I believe you had better
get a life.

So now we post ads for stuff that has already SOLD? What's the point
exactly?
Just gloating at how much you got? Really - I don't get it - pse
explain.... maybe
I'm missing something...

It would be far better to scrap out the dozen Heathkits destined for the
scrap heap, rather than part out what was described as being a
"pristine" unit earlier. It don't make any sense to part out
pristine examples, since few have survived in that condition.

BTW, 465s are a dime a dozen, not rare, and there are already
hundreds of parts units available from dealers... I doubt you would
gain financially from that venture...

Pete

I'm not a big fan of this behavior myself, BUT....

I've tried selling off my Heath HW-101 station. Works fine and decent cosmetics. I've been unable to sell it for $225, yet I see the speaker alone sell for about $100 and the power supply sell for $150.

If I was like this guy, I'd sell the speaker and PS, yank out the tubes from the rig and junk it. Can't bring myself to do this so I'll keep dragging it to junkfests.

first,

i always have to laugh at the "open forum" here. it's kinda like christmas as a kid, for me. you expect something new, but as always, same shit, different box. save the breath on free speech, i am done.....

i can understand joe's reaction. 'most" people who frequent this group look at a junker radio and see what can be raised from the ashes. if you don't, you probably don't like boatanchors. yes, we scalp "junk" to keep the others living, however most take no pleasure in it. i, for one, am not proud of scalping old rigs. i'd like to save them all. truth is, we can't. and if i wish to continue to use and enjoy my heathkits, swans, hammarlunds.....i will have to do this from time to time.

however, to take a perfectly working rig and dice it up for parts, is absurd. i can relate with joe's comments, i love old radios. any brand. for me, the monitary value does not matter. (flamers note: i said ME) i would venture to say "most" hams have one piece of equipment in the station that money simply can not buy.

yes, it is his stuff. yes, he can do whatever he wants. yes, we will not stop it. blah blah blah.

yes, it is sad to see.

your milage may, and probably will vary.

FWIW, we are talking about Ebay here! Does anyone actually believe that
a person is parting out a mint unit in the first place?

Ebay is the home of " I can't find a power cord, and don't know how to
hook up an antenna, so the unit is as-is" or I turned it on and the
tubes light up, but don't know how to ...yada yada.

Think about it.

Just because it is a persons "right" to do something - and make no mistake about it, if he wants to crap in the radio, then run over it with his car - it is his to do it with. But that really doesn't make it right.

A person that loves old radios would almost never tear apart a mint rig.

But of course, we are talking about Ebay here. A person would do well to take any claims as to "mintness" with a big bag of salt!

> pristine examples, since few have survived in that condition.

I believe I understand both sides of this argument pretty well, and I don't have a dog in this fight, anyway, but just for the sake of thinking things through, rather than succumbing to assumptions...

...suppose you had one pristine radio and a dozen clunkers (total of 13, one working), and you whipped out your spreadsheet and found that you could end up with a total of six good working rigs if you left the pristine rig alone, but eight good working rigs if you parted it out. What then?

Sorry fellow, I wasn't quick enough to post the AT-1 and AC-1 when it came up for bids. I am not the seller of this gear. I just thought some folks would find it interesting to know what an AT-1 went for---and the photographs were very nice.

My first connection with the AT-1 was back in 1971 when my friend got one for cutting grass---we were both Novices and in high school. He didn't need the AC-1 antenna coupler and gave it to me.

I guess I should have posted the Allied Knight Kit Ocean Hopper with a final bid of $200 or so a week ago and still did not make the reserve---it was in pristine condition!

Best to remember, this is the 'boatanchor' newsgroup.

The following is really not true. There are a lot of very nice radios on eBay. Think of the guy that steals new cars and parts them out. Old radios have no real value to most of the population so does it really matter in 40 years or so they will all end up in the scrap yard anyway because there will be nobody around to use them and nowhere to use them . Ham radio is a dying Hobby period. I have determined there are a lot of people on this group that really do need a get a life.

FS HP 8640B SIGNAL GENERATOR
I tuned a few duplexers with it.
This signal generator will output frequencies from about 450 KHz to
550MHz at levels from 140 to +20 dBm. It also has an audio frequency
output of 400 and 1000Hz adjustable from 1 mV to 1V into 600 ohms.
Generator output can be modulated with AM or FM internally and pulse
externally.
Price: 300.00

I think you are talking about the relay to switch between ham and General coverage. I finally got a new one several years ago from Yaesu. Its almost too small to burnish the contacts. The problem seems to be dust and the plastic cover does come off juts be careful. I used a tube puller (or something with plastic or rubber tongs). Only use Caig deOxit not anything from Radio Shack. At first you can tap it back to normal operation.

I have two FT 980's

Yup - but nowhere near a record.

Back about 2000 there appeared on eBay an unbuilt AT-1 kit. It was
dated 1956 and had not even been opened. It was one of the very last
AT-1s sold by Heath before it was replaced by the DX-20.

The bidding was fierce and the final price was....$5100.00. Not a typo
- five thousand one hundred US dollars.

I got mine a few years before...might have been around 1967. It was my
first transmitter...subsequently replaced by a Globe--uh, can't remember the
model--before I lost interest and let my ticket expire. I subsequently
donated them both to my Jr. college electronics dept.

My first shortwave receiver (besides the old Zenith console) was a Knight
Space-Spanner. It got replaced by a Heathkit GR-54, which I'm looking at as
I type.

For me, it's the Heath GR-54 mentioned just today in the thread about the AT-1. My brother and I built it while in high school...around 1966. When he passed away in 1993, I just happened to have possession...we had passed it back & forth over the years. I probably wouldn't have been able to bring it back on the airplane from Phoenix (where I went to arrange shipping of the body back to Missouri) had it been in his hands at the time.

OTOH, the faceplate is cracked, and there's a knob missing...so, if anyone were parting out one--even a 'pristine, perfectly working example'--I'd be interested in those parts, and glad to have them.

I guess this example represents both sides of the argument....

No, it was directed to the one who uses the e-mail address of
user@nodomain.com or some such address. He e-mailed me direct with his
comments, and didn't have the courage to leave a "valid" return address for
me to reply. Therefore, I ask that he keep his "group" comments TO the
group. If ya haven't got the balls to accept criticism or a general reply in
return, then don't clutter up my mail box. With the comment as was made, I
must take to the thought that it is HIM this thread was discussing for him
to be so "embarrassed" so as not to supply a "valid" address. I may be
wrong, but so be it. Wouldn't be the first time and damned sure won't be the
last. Quite frankly, if it is him, I really don't give a damned what he does
with his radios. They're his.

Let it go. He's kidding himself.

The market is self regulating. The first time he breaks down a
radio, folk who desperately need that one board, switch wafer,
bezel, or knob will bid the prices of the parts way up.

Last year I was in that situation for a Heath part.

The second time he does it, a few bottom feeders will bid up the
choice parts.

That time or the third, he will saturate the market and most parts
will go for less than the sum of the whole.

By the time you factor in the eBay commissions, the time to break
down the radio, manage the auction, and divide that into the
"profit", he'd do far better to deliver pizzas or clerk at the 7-11.

On the other hand, the winners are the restorers. If I need a knob
or wafer switch (something hard to fabricate) I might pay ten
or twenty dollars. That'd take my incomplete radio to "works great,
looks great" and might double its value from say, $250 to $500.

If he buys it and breaks it down, the first choice parts might go for big bucks, $10 for a knob, $20 for a wafer switch. That fools him into thinking that he has found a money machine. Pretty soon, he'll be left with a basket case, a "first fifty bucks takes it all".

And so the cycle continues.

But, he is providing a valuable service. It might seem like a ghoul who's grabbing young people off the street and selling their kidneys and heart to transplant surgeons but it's not.

Every radio that he breaks down gives new life to perhaps a dozen others and at some point, he'll be stuck with an incomplete chassis and will lose money. He's speculating, gambling that there will be a buyer for the parts.

Realize too that we are in an unusual situation. At least that's what I believe.

Boat anchor radios are rising in price but the appreciation has just started. They were way undervalued. Some folk know this and are buying and restoring to preserve the history.

At some point, there will be no more "I don't know what this is, but I'll take $20" deals. It will take *one* appearance of a 75A-4 or HQ-180 on an "Antiques-greed show" and overnight, every boat anchor will triple in value.

This might not happen for 10 or 20 years, it might never happen but that is the nightmare that faces us.

I've heard that already, there are circles of "known collectors" who will not sell radios to someone who will mistreat them. I've noticed that interesting workhorse radios have vanished from the hamfests.

In the last 2 years, attending a dozen regional hamfests, I have not seen *any* Drake 2-B's, SX-101s, HT-37s, Thunderbolts, HW-monobanders, SBE-33s, Early Swans, SR-160, NCX-3, SB-200s, HQ-180s', NC-300s, NC-303s, Gonsets.

The radios that have vanished are the mid-range, the ones that the average ham owned or aspired to; the radios that used to go for a hundred or a couple hundred bucks, take it.

These are all locked away on the retro-shelf of private radio rooms. "Sell my SX-101? A lousy $300? That's 4 fill ups of the truck. I'm keeping it."

You can still find high end stuff but not the mid-range or the low end. I've never seen an S-120, R-55, T-60, at a hamfest. "$60, that's two steak dinners? I'll take the radio and eat mac and cheese."

check out my boatanchor page www.kiyoinc.com/heathstuff.html

thanks and keep fixin' those anchors!

3056. WTB: Thermocouple assy for T-368 antenna tuner

Newsgroup: rec.radio.amateur.boatanchors

Looking for one of the two RF ammeter thermocouples, mounted inside the T-368 antenna tuner. One of mine is OK but the other doesn't have the bakelite cover. Although it appears to ohm out OK (?), be nice to have a known good one. Tnx much de K3HVG

3057. Old broadcast and misc. radio gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-25 04:10:47 UTC
From: Larry Anderson <land1524@bellsouth.net>
Message-ID: <HAzsc.1360$3X4.297@bignews5.bellsouth.net>
Source record: 23670

Finally got a chance to look over some broadcast equiment that's been stored away for many years. Took pics as best I could in a dark, jam-packed trailer. (Posted to a.b.p.r.)

There's lots of gear from an AM radio station (KWDR, 810Kc): Gates transmitter (model unknown, poss. rated 500W), M02890 Freq. monitor, Collins deviation meter, Gates M-5133A "speech input system", M-5136 mixer. Gates turntables. Gray 206-S tone arm NIB.

Some misc. test equipment: Heathkit T-3 sig tracer, Eico 324 sig gen.

Mil surplus: BC-620-G, RT-67/G.

Ham gear: Hammarlund SP-600

Aviation: Narco VTLR-2, and stuff without nameplates.

Magnecorder (like F-35-B except case style different)

Let me know if you see anything you are interested in. If you need more info on an item, that can be arranged. If not spoken for, it will probably end up on *bay.

Thanks,
Larry

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Heathkit HD-1416 Code Practice Oscillator....$15 plus Shipping
This unit works and runs off of a 9 volt battery (not included). Hook your telegraph key to this unit and practice your code!
http://members.cox.net/radiostuff9/heathcpo.jpg

Calrad Japanese 70 MM Vernier Dial-NIB.....$20 plus Shipping
This vernier is new in the box and is the 70 mm version. The back side mates to a standard 1/4 inch shaft.
http://members.cox.net/radiostuff9/vernier.jpg

National Type ACN Dial.....$35 plus Shipping
http://members.cox.net/radiostuff9/nat_acn_dial.jpg
http://members.cox.net/radiostuff9/nat_acn_dial2.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$50 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittently.
http://members.cox.net/radiostuff9/heathkit_xstrradio.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio2.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio3.jpg

Triplett 800 VOM with Manual.....$50 plus Shipping
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Western Union Legless Telegraph Key.....$35 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

J.H. Bunnell Brass Telegraph Key.....$35 plus Shipping
This mounted to a metal base and it appears to have come from the
factory this way or else someone did a very professional riveting job.
http://members.cox.net/radiostuff9/bunnellkey2.jpg
http://members.cox.net/radiostuff9/bunnellkey.jpg

Lionel J-36 Bug Telegraph Key - W.W.II.....$125 plus Shipping
J-36 Bug telegraph made by Lionel - the famous train company. Lionel
stopped making trains during W.W.II and made telegraph keys and other
instruments for the war effort. The key is in excellent shape for it's
age. As is typical of these bugs, it only has part of the Lionel emblem.
It is unusual
to find one of these keys with the complete plastic emblem. The Lionel
nameplate was made out of a celluloid-type plastic, and the vast
majority of Lionel J-36 bugs lack a nameplate.
http://members.cox.net/radiostuff9/lionel_bug.jpg
http://members.cox.net/radiostuff9/lionel_bug2.jpg
http://members.cox.net/radiostuff9/lionel_bug3.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$40 plus
Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Electrovoice Model 623 Microphone - New in box.....$125
plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has
a small crack on the lower left side and their is a scuff across the
meter face. No probes but has a connector so you can build your own.
Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo
Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

3069. Dayton this year

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-26 03:32:31 UTC
From: tk41c@aol.com
Message-ID: <20040525233231.27780.00002261@mb-m11.aol.com>
Source record: 23680

To those who attended: What were your impressions of the the hamvention this year? Even though a few more tickets were officially sold over last year, I would guess that the flea market was down at least 25%. Certainly, the weather did not cooperate, especially on Saturday.

Is eBay permanenetly eroding into the Hamvention fleamarket?

Good foreign attendance this year, with hams from the UK,Canada, Germany, and of course, Japan.

I managed to stop by the new Fair Radio store in Lima and was amazed at the size of the place over the old location. Naturally, Japanese hams were there to

survey anything made by Collins.

Will you return next year? Comments welcome.

3070. Re: Dayton this year

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-26 04:27:27 UTC
From: John <John@nospam.com>
Message-ID: <pqGdnU8BXcMngSndRVn-hA@comcast.com>
Source record: 23681

Hello Jay. My impressions:

* Yes the vendor flea market attendance definitely appeared to be down

* The rain on Saturday didn't help but what really doesn't help is when the vendors pack up early and leave .. which causes fewer buyers to venture outside ... which causes more vendors to pack up and leave ... which causes fewer buyers to venture outside .., etc, etc. I was out there on Saturday shopping and the vendors that bailed out got exactly $0.00 of my money.

* The flea market vendors are not supposed to leave early but many of them get past the lax security. Note to DARA - its only a matter of time until someone gets run over in the flea market lot during the next rainshower & high-speed bailout by vendors who have been sitting in their truck drinking beer all day. Guess who they're going to sue first ???

* Note 2 to DARA. Its obvious that many of the flea market spots are simply parking spots for people with nothing to sell but who are too lazy to haul their big fat asses from and to a real parking spot. This makes the flea market much bigger than it needs to be and means that the overwhelmingly out-of-shape buyers will be able to make fewer rounds of the flea market and hence spend less money with the real vendors !

* Note 3 to DARA. You're doing a wonderful job. Keep up the good work.

* Note 4 to DARA. If the event was held twice a year you can be sure I would still take the 10 hour drive and attend both.

* All in all I had a fine time and came home with some new goodies.

* There were definitely fewer boatanchors to be had in the flea market this year.

* There are always complaints about the Hara facility. I have to assume the Hara arena is used because its the cheapest and most convenient facility available. If it was moved elsewhere and DARA had to increase the admission by 10 cents to cover it, I'm afraid there are a large group of hams that would scream bloody murder and refuse to to ever attend again. So lets leave it at Hara unless there really is a better place for it.

John

FS: HP 8640b opt 323
I sent a signal into the Service monitor and I tried it on 995 MHz and
it sends a signal out fine. I thought these were only up to 550MHz
But this one sends out signal all the way up to 1000 MHz
I tried it all over and works GREAT!!!
Nice display also.
Please make offer and if it sounds good, I'll consider it sold.
Please don't ask how much, just make offer.
Ready to sell!

Al, I ran into a similar situation when the power cord on my old 8mm
movie projector failed. I had a lot of PC parts in my shop and
replaced the socket on the projector with one from a dead PC power
supply and used a PC power cord. I don't think there will ever be a
shortage of them in my lifetime.

3074. AR88 Restoration project: Some Questions.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-26 18:34:47 UTC
From: joelandyman@postmaster.co.uk
Message-ID: <c8a1b4c0.0405261034.4245b2e9@posting.google.com>
Source record: 23685

Dear group members,
Having Completely restored the front panel, Dials, and knobs on my second AR88D, I am now starting on the receiver circuitry itself. I've got an AR88LF in full working order too, so this one is a 'when I've got spare time at work' project, with bits getting done during lunch-breaks e.t.c. (!).
The Unit has obviously had a bit of water inside the case, causing a bit of rust on the tank-capacitors near the base of the unit e.t.c.
I have just got round to removing the power transformer and testing it. All works OK, so I've re-sprayed it, and re-fitted it.
I have a few questions for the group before I can go much further, so here goes:

My next part for restoration involves the Chokes associated with the power supply, namely L49 and L50. One of these is on good shape, whilst the other one has a kind of Bitumen type stuff leaking from the bottom. Were these units potted in some way, or is this the dreaded PCB-based oil leaking out? I can re-spray and re-fit these units if there's no problem, but I want to weed out any hazardous substances.
(My chokes are the completely cylindrical type, not the square ones which I've seen in some AR88 pictures on the web.)
The metal-contained capacitors at the rear of the unit will obviously be replaced, although they're not actually leaking.
Another question, therefore, is where do I source some new high-voltage capacitors?
Going back to the Chokes, the manual doesn't give any indication of Value, so I'm struggling to source replacements if required!
Right, I think that's all for now. I'll summarise my questions at the bottom, but first I must ask if there's anything else to look out for which may be the difference between Repairable AR88, and Furniture-only AR88 !!
Right, summary of questions then:
1. Are the Chokes L49 and L50 filled with PCB-containing fluid, and is it black & sticky when it leaks out?
2. Where can I find out the values of these chokes (not in manual), and where can I source substitute or replacement parts?
3. where can I source some replacement high-voltage capacitors C96, C97, C98?
I can fabricate a new enclosure, to make the replacements look the part!

I should mention that I'm aware of the various spares for sale on ebay, and my eyes are peeled for any relevant parts.

Finally, if anyone wants to restore their dials, I have Bitmaps of the original dials. The main dial was scanned and touched up with photo-editing software, while the vernier dial was drawn on the CAD system at work. I printed these out on glossy paper ,and bonded them to the original tufnol disks. I can E-mail these pictures, post them on CD, or print them out on relevant paper if anyone would like to update their dials. OK, it's not the best way of doing it, but it's the best I could do without spending a lot of money, and they'll look superb for at least 10 years!

Feel free to E-mail me regarding any AR88 info.
Many thanks for reading.
Joe Landy.

Hello Jay. My impressions:

* Yes the vendor flea market attendance definitely appeared to be down

* The rain on Saturday didn't help but what really doesn't help is when the vendors pack up early and leave .. which causes fewer buyers to venture outside ... which causes more vendors to pack up and leave ... which causes fewer buyers to venture outside .., etc, etc. I was out there on Saturday shopping and the vendors that bailed out got exactly $0.00 of my money.

* The flea market vendors are not supposed to leave early but many of them get past the lax security. Note to DARA - its only a matter of time until someone gets run over in the flea market lot during the next rainshower & high-speed bailout by vendors who have been sitting in their truck drinking beer all day. Guess who they're going to sue first ???

* Note 2 to DARA. Its obvious that many of the flea market spots are simply parking spots for people with nothing to sell but who are too lazy to haul their big fat asses from and to a real parking spot. This makes the flea market much bigger than it needs to be and means that the overwhelmingly out-of-shape buyers will be able to make fewer rounds of the flea market and hence spend less money with the real vendors !

* Note 3 to DARA. You're doing a wonderful job. Keep up the good work.

* Note 4 to DARA. If the event was held twice a year you can be sure I would still take the 10 hour drive and attend both.

* All in all I had a fine time and came home with some new goodies.

* There were definitely fewer boatanchors to be had in the flea market this year.

* There are always complaints about the Hara facility. I have to assume the Hara arena is used because its the cheapest and most convenient facility available. If it was moved elsewhere and DARA had to increase the admission by 10 cents to cover it, I'm afraid there are a large group of hams that would scream bloody murder and refuse to to ever attend again. So lets leave it at Hara unless there really is a better place for it.

Source record: 23495

Hi all,

Just acquired a beautifully built late 1950's electronic keyer - I have seldom seen construction of this caliber.

I'm thinking someone might be able to ID it based on a circuit description. I don't have a large vintage library, so I'd like to find out if it appeared as a project in QST or Handbook or some other publication....

Unique in that it uses 2 12AU7s plus a 6AS7 as the electronic key on the output. There is a 'bias' and 'balance' control on the front that determine the switch characteristics. Oddly, I can make it key my VOM 'toner' function just fine, but it won't key my old tube code oscillator. Haven't tried it on a rig just yet - but there are NO relays in the output.
The keying output is by the 6AS7 only. There is a neon 'indicator' light on the front that shows dots and dashes. No sidetone.

Whoever built it even built in a
Vibroplex-esque brass keyer paddle into the base, so it's self contained.

Does this design sound familiar to anyone? Long shot, but who knows...

Come to the HCRA's 4th Annual Tail Gate party in Feeding Hills, MA. The tail gate party is a nice affair held in a newly paved parking lot behind the Feeding Hills Congregational Church.

At least one commercial vendor will be on hand. John Bee of Quicksilver antennas will be displaying his Anderson connectors and accessories, antenna accessories and portable antennas.

Pack up your stuff and bring it out for quick sale, or come over and find a bargain!

Music provided by Jx2 productions. Coffee & Donuts, raffle prizes and also our regular club meeting. Here's the details:

Time: 6:30 PM
Date: June 4th, 2004
Place: Feeding Hill Congregational Church
21 North Westfield Street
Feeding Hills, MA 01010

Admission: FREE for buyers!
$5/space for tailgaters.

For additional information contact Dave, KB1MU mailto:kb1mu@charter.net or 413-596-6605 or visit our web page at http://www.hcra.org

I look forward to seeing you there,

Jim, KK1W

That's my thought - but alas I don't have an old Halli to compare to. But
I don't recall the Hallicrafters having the balance and bias controls - or
the 6AS7 (BIG tube) for output. Seems to me they used a small relay??

Have since tried this on a rig and it works great! REALLY fun keyer to
use and neat to look at! I'll have to hunt down some old Handbooks and
see if it's maybe one of the early TO keyer designs.

What years did they do those?

Yes (original poster here) - that's the only handbook I have, and it's the closest I've found. Could be the original builder devised a way to key the output with the 6AS7 (which is the size of a 6L6 - he cleverly recessed the base of the tube into the chassis, below the paddle 'deck').

Makes me want to homebrew again! Just can't get over how well this thing is built - and it works so doggone perfect I can't believe it! Acts and looks like it was built yesterday. Of course, it may be just a few years old built from an old schematic... hard to say.

Anyway, thanks for the input

Dave WB7AWK

That would have been my guess, because it made such a splash that it would seem to have been common.

Oddly, though, I don't see it in the 1961 Handbook, though I would have expected it. By 1968, the next one I have, it's gone solid state. There is an IC version of the '9TO keyer, and I know I've seen plenty of references to it, but unless I start digging I can't tell what tube lineup the original used.

On the other hand, the IC version seems to suggest more than a couple of tubes. There are a couple of flip flops, and you'd need a dual triode for each one.

The 1961 Handbook shows a simple keyer, with a 12AU7 as the "clock" and rectifier, and another 12AU7 for the rest of the keyer. A relay actually keys the transmitter. That seems to be closer to the level of the keyer the original poster is asking about.

But that's the thing. With home made stuff, you can never count on
someone building it just like the article. Obviously, there were some
articles over the years that somehow became highly popular, maybe because
they were intended to be duplicated rather than a write up of something
someone built, but those are the exceptions. I sometimes find it amusing
to see people ask about "a two tube radio that was in one of the hobby
magazines around 1965", because something that generic would have appeared
a whole bunch of times, with different tubes, in different magazines, even
different years, and even because someone wound coils on pillboxes instead
of using Airdux coils.

It's the more complicated things that tend to be unique. And of course
even then, there is no guarantee that someone built it from a magazine
article After all, someone has to build them in the first place before
they get into a magazine, and even then not everything that was built
made it into a magazine, or was a copy of a magazine article.

Use the 1961 schematic to trace the keyer, and maybe you'll find a match.
I know it's often easier to start with assumptions such as that when tracing,
and soon you'll find whether it is the same thing, or close.

There was another front-cover-of-QStreeT-in-the-'50s 12AU7 keyer called the "Ultimatic" by a gent named Turrin, W2IMU, who, I think, is still around.

Hi, all concerned:

Saw a listing the other day in which the term "hidden' feedback was used.
IIRC, the seller was touting a boatanchor.

Searched ebay policy for references, none found.

Anyone have an explanation, pls?

TIA & 73, Dave, N3HE

Hardware stores often have spring assortments. I saw some springs at the
local ACE hardware store which would be useable.

Salvage an old VCR or tape deck. They usually have several good springs.

Hidden feedback means the seller probably has less than
stellar opinions of what he's selling. But I do know of one
seller with 100% positive who also uses hidden feedback.
So not sure what ALL the motivations might be. Clearly
some folks just don't like the whole feedback system.

Personally, I think Ebay should make it so you couldn't
post feedback for 30 days after an auction closes. That
way the two parties could 'work things out' if the deal went
south. Also should be able to change your words or rating.
I don't see why they make such a big deal of the permanence
of comments. If they have to be set in stone, then at least
make it 30 days before they can be written so that tempers
can calm.

Yes, the local ACE hardware store will have assortments. Its easy to buy a
long expansion spring, and to cut sections from it. The end loops for
tieing
off the dial cord can be made by bending out the end loops on the spring
coils. Now, to find good round dial cord...

Is there a dedicated cw rig out there that is not a kit? I am trying to trade my IC-718 for a completed elecraft k1 or kx1. I love to build but don't have time any more with second child on the way. I have built a rockmite 20 and it works well. But I really just want to do cw and I am thinking that perhaps some of the older rigs may be dedicated to cw with all necessary filters, etc.

I should have added. The full TO Keyer has the dual triodes (don't remember if they were 12AX7;'s or 12AT7's. Have to look at the schematic) and TWO murcury relays. There is also the similar Woodfuff, W9UE, Keyer. Don't remember if he put a weight control.

My dad designed & built a keyer about the same time, but it was based on RC timing and charging waveforms rather that Jim's flip-flops.

Ebay is strange. They pulled my auction because I refered to my Hallicrafters World Wide as being like the Zenith TOs. They called it Search manipulation and also I stated in my auction that Pay Pal Pymts must include their transaction fee which is 2.9 percent+ $0.30 USD and they said:

Quote:
Pay Pal Pymts must include their transaction fee which is 2.9 percent+ $0.30 USD.

The above text is a reference to an additional charge for bidders who pay by credit card or a separate payment processing service. This surcharge, which is an added cost to the buyer over and above the final sale price and reasonable shipping and handling costs, is not permitted on eBay.

Additional charges that are an added cost to the bidder over and above the final sale price are not permitted by eBay. Currently, the only fees that may be added to the final price of an eBay item are reasonable shipping and handling fees, escrow service fees, and certain currency exchange fees. More information about these fees can be found at the bottom of the eBay listing policies page:

I don't see why I have to be gouged twice by Ebay and PayPal for offering a conveinant way to pay. Gezz only they can charge for everthing I guess? Like buyers can't read and make up there own mind.

Brian:

So if you want to cover the PayPal fee, offer a discounted shipping for paying in CASH, or place a minimum bid or reserve that is the total of your minimum price plus the ebay/Paypal fees. I know, 2.9 percent seems a bit high for using paypal, but I'd be willing to bet a large number of people with merchant accounts that take credit cards directly are charged more than a fair bit over 2% for non-swiped Credit Card transactions...

Of course, PayPal has to take their pound of flesh. They started with the idea they were going to get rich on the float... that is, they charge the buyer immediately (by credit card or from their bank account), and it sits in the PayPal bank account (or elsewhere) drawing interest until they have to pay the seller. This can be nearly a month in some instances, and banks are well known for making a ton of money on this "float" time. Well, things got interesting, and their automated systems didn't cost all that much, but they needed a higher gross to cover a number of problems with disputed transactions and such so they added a cost to sellers that mimics what they would normally pay to a merchant account provider if they took credit cards. Knowing the volumes they must have, Paypal can't be paying over 2% for non-swiped CC transactions, so the other 0.9% is for their "overhead and expenses". Sounds like I'm writing for them doesn't it? Well, it's anything but the case, because if you look at the cost they have of doing business when the transaction is a transfer from the buyer's checking account, then you see where they are making their profit.

eBay started with a good idea, and have expanded from there. They are clearly the most popular of the auction sites, and everyone else I've looked at is charging nearly the same fees as they are. If I remember correctly, they bought PayPal a while back, so they are making it on both sides now. However, if you look at the alternatives, PayPal isn't all that bad to deal with, compared to some other payment solutions. If you think PayPal is bad, look at Western Union BidPay... They charge the buyer 2.95 for an $11 transaction, and $7.92 for a $110 transaction, and the seller doesn't have to pay a discount... Sounds great for the seller, but the buyer gets gouged pretty good.... Personally, I won't bid on an auction that uses BidPay unless they accept company checks or postal money order as payment. When selling, I accept credit cards directly (I have my own merchant account, and the discount rate I pay is under 2%).

Good Luck
-_Rick

I'm pretty sure the springs I saw were something like 3/16" x1". I have a bunch of springs I've salvaged from VCRs and such, so I didn't make a strong mental note of them. If they weren't part of the store's standard spring asssortment, they might have been the remainder of a special order for a customer. The hardware store may be able to special order springs, or they may be available from McMaster Carr.

I am trying to get some information for a friend of mine. He wants to transistorize some 01As. I remember that the AWA Old Timers Bulletin had an article on transistoring WD11s. I made several of these for my Radiolas 111 and 111A and they worked great but I no longer have the article.

Any help on the original article or suggestions for 01A would be appreciated

Thanks

Flea was down a bit. However, I noticed that there was more radio stuff
compared to last year. Quality was up a bit.

I also noted a few of those vendors bailing early. The solution to that
should be simple. I would note that this has become a flea market trend,
ham or otherwise.

> Is eBay permanenetly eroding into the Hamvention fleamarket?

I think otherwise. It's a cycle. The biggest problem extending from Ebay
now is that some people seem to think that their old junk is worth more
than new stuff
>

What is the deal with that stuff anyhow? It can't be "worth" what
people are paying for it.

> Will you return next year? Comments welcome.

Of course, I had a great time.

It cuts both ways. A normal operating business considers expenses like
that as part of doing business. As a customer I would be outraged if I
went to a merchant and they charged me extra because I chose some
particular form of payment.

Agreed, Bill.
People work at Ebay and PayPal, and they have families to feed, too.
They provide an outstanding service for reasonable money.
The service charges, when compared to the costs of doing business
in the old "brick and morter" way, are far less.
Traditional auction houses are going to get 10-15% of the
final bid price, so the buyer gets nailed good.
Then the seller gets stuck with an average 5.5% charge
if the buyer uses a credit card. Ebay and PayPal fees
are way below this, and they both seller and buyer
an outstanding, low-overhead market in which to do business.
Personally, I think they're the best thing since sliced bread.
Selling a few things on Ebay is the only way I can afford my
radio hobby, and it also helps Kay stay home
to take care of the babies.
The Ebay and PayPal fees are less than half traditional,
and the market is orders of magnitude larger.
I'm grateful for their service.
73 Dave S.

Its not just that, David. Its the attitude that some sellers have that you should have to pay them additional to take your your money. Same mentality often tries to gouge unexplainable "handling" fees because they need to be paid extra for their time. One clown charged me 50 cents extra for his having to print an invoice (which I didn't need or ask for) and another 50 cents for printing an address label! After all, "these things cost money".
Can you imagine having to pay for a portion of the roll of cash register tape at the supermarket or them charging you for using the cashier? Where do people get off thinking that these are legitimate things to charge to a buyer?

I don't have a problem with Pay Pal or Ebay and I do agree. My only problem is I can't state in my auction the things I would like to charge to cover my cost of doing biz. Yes I can set a reserve but there again is another cost. I just think its funny they won't let the bidder make up his/her own mind. Believe me I love capitalism.

Bill your one of the brightest guys I've meet online but. Lets just put it this way. I can either have a reserve that covers my cost or I can have no reserve and just state the fees. Either way as with any sold product the cost of doing biz is always past on to the buyer. What form it takes is neither here nor there. So I guess I don't understand the outrage you would have if I'm upfront with you on cost?

Thanks...
The cost of doing business comes directly out of profits. Thats the way
it works for any vendor or merchant. You can't take 100% of the income
and insist that the buyer pick up the tab for your business costs.
In that light, the manner of presentation DOES matter.
What if a buyer sez, well ok-I'll mail a money order and then wants to
hit you with HIS costs of doing business like 37c postage and 85c for
the money order? You wouldn't think very highly of him as a buyer would
you?

Exactly the point. They are being paid for already as "cost of doing
business" so the merchant need not ask you for more.

Lot's of folks are using woven fishing line, which will flatten on the
pulleys
and bind in some cases. I just did a vintage Crosley console that
defied any of the modern dial cords--they would bind (roll under the
pulley loops) when tuning in one direction. Finding good cord that
remains circular under tension is getting difficult.

Pete

Monte,

The Gold Edition had the 500 hz CW filter as standard. Other than that, they are electrically and physically the same as the non-Gold Edition.

The KB-1 knob has a spinner/thumb area at one spot for faster dial movement. It is a brown/bronze sort of color and doesn't match the gray panel. Hence, if it is the same color it isn't the KB-1 optional, weighted knob. A good substitute for the KB-1 is a replacement knob for the Ten-Tec Omni 6, Orion, etc. They're weighted and only cost $19 from Ten-Tec whereas the KB-1 sells for $50-125 on Upay, I mean Ebay.

73s,

Evan

They're using the wrong type of fishing line then. Much of the "dial cord" on the market these days is of such abysmal quality and suffers exactly what you describe.
I've pretty much settled on dacron fishing line and save the crappy dial cord for the sets where the tension is minimal. I even replaced the bronze wire assembly on an old Philips set with the fishing line because it kept breaking under such tension. The crappy AES cord was kinking up just trying to get it out of the little plastic bag and straighten it out. I hear they are selling a better quality cord nowadays, tho.
:-)

If black and sticky, probably tar (or similar) oozing from
the sealed chokes. PCB, IIRC, is a clear liquid, and I doubt it was
in common useage back in WWII era boatanchors.

In your title or description did you say something like "not zenith transoceanic", or "not like zenith transoceanic"? If so, that is keyword spaming so that when someone searches on zenith transoceanic they get a hit on your set which is not a zenith T/O, which is pretty sneaky at best. As far as the paypal thing, how would you like it if every time you use your visa or mastercard the merchant adds the credit card percentage he pays to the price of the product. Bet you would really scream. Ebay makes it very plain in their rules about the above infractions so you really have no reason to cry. Why should the merchant be gouged for having a convient way for you to pay?

Thanks Uncle peter, that's encouraging news. I'm told the three large capacitors which are sealed in a single case may contain PCB, but it's not a problem to substitute them. I'm still undecided as to what to do with the set really. I may look out for a tatty model which works, and swap my restored front panel, dials, e.t.c onto it. Otherwise, I may completely strip the guts out, and re-plate the chassis and really go to town on the restoration. I'm in the right industry for getting plating done as 'a favour' e.t.c, so it might be the way to go. I'd have to find someone to re-align it for me when re-built though, as I have no access to a sweep generator.
Any offers anyone? !!
Cheers for now.

Source record: 23575
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I just got hold of a Heath Q-meter and am taking it out for a test drive this afternoon. This is my first date with a Q-meter and I have a lot of beginner questions but I'll cut to the chase.

First off it would appear that I'm in need of the calibration gizmo which I understand can be duplicated fairly easily??? Is there anything critical about the particular values used with this unit as long as they are in the ballpark and known to be accurate?

I tried measuring the Q of a few coils and can indeed tell the differences but even on the worst ones I'm peaking off the scale, ie Q>500 which I know cannot be correct. Knowing intimately the coils I'm using I could probably guess the calibration into place within Q=50-100 and that might be adequate for me since the precise "number" isn't my concern inasmuch as being able to do some coil quality experiments and evaluations.

Next, I can't quite figure out how I'm supposed to be able to evaluate a capacitor or a complete LC circuit for Q. Maybe this isn't possible with this rig? Or is it mathematically dependent on the existing internal components of the rig?

I'll continue reading the manual over and over and maybe it will sink in but in the meantime if anyone has some user tips I'd appreciate the assistance.

TIA,
Bill M

No I just said Hallicrafters World Wide Like Zenith TO. I wasn't trying to be sneaky. Its Hallicrafters version of the TO. Hallicrafters are just as poular as Zenith and sell them selves on their own merit. I just stated it because a lot of people like to collect the differant makes of those style radios. I can see how some would use tactics like that though.

As far as the paypal thing, how would you like it if every time
> you use your visa or mastercard the merchant adds the credit card
> percentage he pays to the price of the product. Bet >you would really
scream.

They do you just don't realize it. They just average out their overhead and reflect it back into the price of their products.

Ebay makes it very plain in their rules about the above
> infractions so you really have no reason to cry.

I'm not crying. Just talking and seeing peoples responses. I don't disagree with you guys. If thats how people feel then I'll go with it.

Why should the merchant
> be gouged for having a convient way for you to pay?

I agree. That was my point?

I'm going with it. I can see it isn't popular. I was just looking at it like
this.

Lets say a $50 radio okay and the total cost. This is just a quick guess.

So the buyer gives me $50
-Pay Pal 2.9 %+.30c=$48.25
- packing materiels $8=$40.25
- Ebay list fees $2.50=$37.75
then final value fee(say -$2)= $35.75
Then time packing and driving to the PO+Gas-$5=$30.75
and the radio is still worth $50

I guess you could charge shipping and handling? Thats withing Ebay guide
lines. I never charge for packing materiel and they are expensive or at the
least take time and money to find. And Bill you know what it takes to
properly pack a radio. So how would you go about handling cost?

That is the chance you take with an auction, it could have gone for $20
or $200. If a item sells for less than you think it is worth, do you
think you should be able to make it up in other fees?

I don't mean any offense, Brian, but the TO gang are a severe bunch.
Any radio nowadays that has a handle on top gets to be a TO clone or
companion model just by rights of appearing to be a similar suitcase
radio because well, they have a handle on top.
I personally have no affinity for radios with handles on top but many do
and they can be cutthroat when their favorite is compared to some other
'lesser' radio with a handle on top.

>
> As far as the paypal thing, how would you like it

Been there already.

I figure some wacko pegged you on the quasi-TO thing plus the Paypal
issue and some 19 year old kid in San Jose was pressed for a decision
and he did what any idiot would do.

Relist the thing and up the minimum by 2.90 so as to cover your Pal Pay
and hide the word "zenith" well inside the text so the TO guys won't be
offended.

01A should be substitutable with a big zener diode. It'll have to be able
to handle the current, of course, but you can get a string of lower voltage
higher current ones to get the correct regulator drop. Should be no big deal.

Brian, rarely does it take me any less than half an hour to scarf thru
my available boxes and figure out the combinations that would permit me
to properly pick the ones, or cut down the other ones with a razor
knife, to make a nice double boxed scenario. I'm in a town of about
7000 and if it rains here there ain't a decent box to be found for a few
days and box-finding could easily become a fulltime job.
If I'm lame in the effort is this the buyer's fault? I earn 1000/wk on
my real job so is my time searching dumpsters for boxes relevant as an
add on charge? Am I on the clock for wages once I sell something on
ebay? I could easily trump up 50 dollars of expense like you did on any
item I send out even if it were a single tube. Oh, did I mention my old
86 Isuzu doesn't get the best gas mileage to the Post Office? You get
the point, I hope.

Buyer buys=buyer knows about what shipping will cost. End of story. My
ebay costs, bad gas mileage, packing materials or the fact that I'm
crippled and have to pay alimony aren't the buyer's problem. Thats
"doing business" If I can't make the numbers work then I bail out. Not
a problem. Tagging on buyer surcharges ain't gonna float this raft.

You say $30.75 to pack and deliver to the PO. Are you hiring? I'll move to Bumfuck, MN and pack all your stuff and go to the PO for $20/whack giving you a 66% cost saving.....or is that not what you meant?

Golly, it breaks me heart to hear how the sellers on ebay can't make money.

More things to add in:

Cost of electricity to operate the computer.

Computer depreciation.... you guys ARE depreciating your computers aren't you? And the way computers depreciate, you lose money.

Toilet paper when that no-reserve item sells for so low that you crap yourself. 8^)

Printer paper, ink , etc.

A couple final thoughts:

If you have costs, you factor them into what you are doing, and don't bore the customer with them. I don't want to hear the person I'm buying something whining about the cost of packing material.

If ebay is such a profitless venture, bring that 50 dollar radio to a hamfest, and pay the 5 bucks or whatever for the table. Yeah, I know, it costs for the gas, and sandwidges and sodas.....

Scott, you're usually a sensible poster but the usenet censors are all over themselves trying to figger out the "big zener" approach. I have it on personal authority that 'they' will allow you another stab at this question. I think they want to see the term "RF" in the answer.

The one I have is a 250 uH coil of known Q, L and C. Seems you need a
calibrated Q meter to make a standard.
>
>I tried measuring the Q of a few coils and can indeed tell the

How are you using the meter? The standard procedure is:

Connect 'unknown' coil rto L terminals
Set the mode switch to "CAL"
Set the oscillator band switch to the correct band (see chart on top of meter)
Set the oscillator dial to correct frequency (see chart on top of meter)
Adjust level control to red "X1" line on meter
Switch to "Q"
Adjust meter zero control so meter reads zero.
Adjust LC dial to peak
Read L from dial
Read Q from meter

>
>Next, I can't quite figure out how I'm supposed to be able to evaluate a
>capacitor or a complete LC circuit for Q. Maybe this isn't possible with

The Q of most capacitors is so high that the tuned circuit Q is determined by
the coil, so if you know coil Q you know the LC Q.

Come to the HCRA's 4th Annual Tail Gate party in Feeding Hills, MA. The tail gate party is a nice affair held in a newly paved parking lot behind the Feeding Hills Congregational Church.

At least one commercial vendor will be on hand. John Bee of Quicksilver antennas will be displaying his Anderson connectors and accessories, antenna accessories and portable antennas.

Pack up your stuff and bring it out for quick sale, or come over and find a bargain!

Music provided by Jx2 productions. Coffee & Donuts, raffle prizes and also our regular club meeting. Here's the details:

Time: 6:30 PM
Date: June 4th, 2004
Place: Feeding Hill Congregational Church
21 North Westfield Street
Feeding Hills, MA 01010

Admission: FREE for buyers!
$5/space for tailgaters.

For additional information contact Dave, KB1MU mailto:kb1mu@charter.net or 413-596-6605 or visit our web page at http://www.hcra.org

I look forward to seeing you there,

Jim, KK1W

Well, if you're using the 01A as a reference voltage for a regulator, I
don't see any difference between it and the zeners.

Of course, you could be using it as a noise source... and the 01A does
spew out huge amounts of RF trash. Even more than the zeners will,
and the zeners are noisy as hell.

According to RCA and GE an 01A is a triode used as an amplifier or a
detector diode. They were around before dirt.

3182. Clemens SG83 signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-05-31 16:59:54 UTC
From: Pete & Renee Davis <pandr@metrocast.net>
Message-ID: <40BB648A.24F4EE9E@metrocast.net>
Source record: 23593

I've been lurking on the group for a while. I'm a newbie who barely knows an volt from an ohm so far, but I came across a Clemens SG83 at a flea market this weekend. Not having a clue what it was, I wrote down the name and did a Google search when I got home. surpussales.com has the manual and it's a signal generator. It has a Bogen PRS 16 power supply and no leads.

Can anyone tell me if this is a worthwhile piece of test equipment? How hard would it be to find compatible leads? How can I tell if it's working properly? What else should I know about this rig before I go back up there next weekend with 25 bucks and high hopes that no one else knew what it was, either?

Any advice will be welcomed.

Pete Davis

Pete,

I have an SG-83C. It's an excellent RF (radio frequency) signal generator. It's not a lab-quality instrument like, say, a Hewlett-Packard 606, but it's a solid notch or two above standard radio/TV service-grade gear. I'd put it on a par with the B&K E-200D. I know these model numbers may not mean a lot to you at this point, but they provide a little context for others who may want to chime in.

It generates RF signals that can be used to align AM and shortwave radios. The frequencies generated are in six bands, with the lowest band starting at 50 kHz (kilohertz), meaning 50,000 cycles per second, and the highest topping out at 54 MHz (megahertz), or 54 million cycles per second.

The output is metered so you can come pretty close to figuring out sensitivity, overload characteristics, and other qualities of a radio under test.

The innards are well shielded to keep the generated signal from leaking out. And it's very well constructed.

The plain SG-83 was introduced in 1962, the A model in '64, the B in '66, and the C a couple of years after that.

My C model doesn't have a separate power supply. It uses a battery or can be connected directly to the AC line. I'm a little puzzled by your reference to a Bogen power supply.

Anyway, it is a very worthwhile purchase, especially for $25. I paid $100 and consider it well worth the price.

Cheers,
Avery W3AVE
Potomac, Md.

You can add audio modulation to the RF signal.

Hi All,

New to the newsgrouops, but not to the radio hobby. I'd like to buy a Collins R-389 LF receiver in complete and decent shape to complete my listening shack. I can but it outright, but also have a few choice items I'd consider for trade or partial trade, one way or the other. I'd consider trading my TMC CV-591A Single Side-Band converter, or Collins 180S-1 Antenna Tuner in consideration towards a R-389.

Thanks, Dan

I'd guess condition is the governing factor. Chrome on cabinet, radio
front
panel.. And, has it been fully restored? If someone brought one to me for
restoration, the bill would be at least $350.00 for labor, including
replacing
wax caps and electrolytics. A full week's work involved in one of those.

Pete

It was another small black box that was attached to the side of the Clemens. It had a two prong power cord. I didn't copy down everything on the name plate, just "Bogen PRS 16 Power Supply". If I'm lucky and it is still there next weekend, I'll try to let you know the rest of the info on the name plate.

Thanks to all for your responses to my questions. I look forward to having many more to ask.

Hello Everyone,

Just wondering if anybody happens to have any old tube based Color or Black & White Televisions from the 1940's to 1960's in the Surrey/Vancouver (British Columbia, Canada) area
that they would be willing to get rid of. It doesn't matter if it is in working or not-working condition. I'm just looking for something reasonably priced - hopefully free :) I am looking for a couple to start a small collection/hobby. Will come and pick-up.

Thanks for your time,

Chris

Two commercial possibilities. I had the Eldico EE-3A and this one has a sloping front and was quite common. An even older keyer that used bigger tubes was the Mon-Key. I had one of these in the late 50's. These were made between 1947 and 1954. On this one you can hear relays clicking as you key it (above the built in sidetone). I have a schematic somewhere and will look for it.

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Hallicrafters SX-99 Receiver and R-46B.............$500 plus shipping
This radio is in very nice condition. It has no extra holes or
modifications and has all of the correct knobs. Has all of the original
Hallicrafters tubes and several of the original paper tags It plays very
well on all bands and has good audio. The cabinet has no dents or
gouges, just some minor scuffs. The speaker is also in very good shape.
It has some small scuffs and scratches but no dents. Includes a
photocopy of the manual.

http://members.cox.net/radiostuff9/hallir462.jpg
http://members.cox.net/radiostuff9/hallir463.jpg

Lafayette HE-10 (KT-200) Receiver .....$400 plus Shipping
A pristine and collectible Lafayette HE-10 receiver. This is the same as
the Lafayette KT-200 receiver. This is also the same receiver as the
Trio 9R4J. Trio became Kenwood. The styling of this radio is similar to
the Hallicrafters S-38 but this radio is far superior to the S-38. This
is a 9 tube, AM/CW receiver that covers 550 kHz to 31 MHz. It has an
S-Meter, AVC, ANL, hinged cover. This radio is in excellent condition
inside and out. Their
is one small blemish on the top left towards the front of the cabinet.
This can be seen in the photo. The receiver plays well. Also included is
a photocopy of the manual.

http://members.cox.net/radiostuff9/laffhe106.jpg
http://members.cox.net/radiostuff9/laffhe108.jpg

Dentron 160-10AT Transmatch.............$125 plus shipping
he 160-10 AT, when properly adjusted, will tune
out load resistance and transform the load impedance to 50-70 ohms. The

160-10 AT
also includes a highly efficient balun, so antennas fed with open wire line may be
properly tuned to desired frequency. The 160-10 AT may also be used with coax fed
antennas as well as end fed single wire types, balanced and unbalanced feed lines.
The 160-10AT comes with an SO-239 input connector, with outputs of an SO-239
coax connector, single wire, or balanced lines. This tuner works great and looks like
new on the inside. There has never been any arcing in this tuner.

http://members.cox.net/radiostuff9/dentrontuner3.jpg
http://members.cox.net/radiostuff9/dentrontuner4.jpg

Heathkit HM-2140 Peak Reading Wattmeter....$125 plus shipping
Heathkit HM-2140 Peak Reading Wattmeter. This unit will read power in two scales: 0-200 watts and 0-2000 watts. Frequency range is 1.8 to 30 MHz. The unit runs on a 9 volt battery and the remote sensor can be left in the cabinet or mounted several feet from the unit. This is a working unit in excellent condition. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/heathhm2140.jpg
http://members.cox.net/radiostuff9/heathhm21402.jpg
http://members.cox.net/radiostuff9/heathhm21403.jpg

Precision E-200-C Signal Generator.....$40 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Vintage Fairchild "Nixie Tube" Multimeter.....$40 plus shipping
This is a Fairchild model 7050. This is a voltmeter and an ohmmeter that measures up to 1.5 kV and 15 megohms on the resistance scale. This is a nice working unit and accuracy looks good.
http://members.cox.net/radiostuff9/fairchild_nixie_meter.jpg

Daiwa CN-620B SWR Bridge and Wattmeter.....$80 plus shipping
Daiwa CN-620B Twin Needle SWR Bridge and Power Meter. This is a very clean, working unit that will cover 1.8 to 150 MHz and measure power in three ranges: 0-20 watts, 0-200 watts and 0-2000 watts. I place this meter in in line and compared it to my Bird Wattmeter and it is very close in readings.

Heathkit HD-1416 Code Practice Oscillator....$15 plus Shipping
This unit works and runs off of a 9 volt battery (not included). Hook your telegraph key to this unit and practice your code!
http://members.cox.net/radiostuff9/heathcpo.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$50 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittantly.

At a 35 hour week, that's $10/hour. Gotta be a labor of love.

But about the SX-28A. Prices of everything are all over the place.

I've see some SX-100's going for over $1,000. But then, one
just went for about $300.

And SX-88's, one went for $7,700 but others don't make half that.

At the recent Howard county hamfest, there were two SB-303's. A
very nice one with all three filters, build manual, and the all
important powercord was $100. About 100 feet away, another SB-303,
not as nice, only two filters, SSB and CW, was $225.

There is no pattern.

An Unbuilt Heathkit HD-1250 Solid State Dip Meter.....$225 plus
Shipping
This unit covers 1.6 to 250 MHz with 7 coils and runs off of a 9 volt
battery. Everything is there and still in the original packing. The only
issue and this is a problem with all of these units is that the black
foam in the case has disintegrated. The new owner will need to clean
this off with a solvent. The coils will be removed and placed in a
separate bag. I have had several of these units and they all have had
this problem no matter what part of the country they have come from.

What sorts of alignments and repairs?

If you're doing solid state stuff, the hFE function is very handy to have. The capacitance tester is very handy for just about all technologies I think, although it's bad to put too much faith in it. If you are working with audio and need reliable measurements of non-60 Hz AC, it's important to get a true-RMS meter, but if you do not, it's not worth the substantial extra cost for true-RMS functions.

I have found the frequency counter function VERY handy for working on a lot of things. If it goes high enough, you can use it even for things like making sure the LO is on-frequency.

Wonder if Radio Shack 21-543 uses switched capacitor filters as basis.

Google no direct help but does show Rad-Shack parts list that might
be plumbed for an answer.

Would like to move the CW center-freq. around the 750 hz place it's
currently located - per '95 Handbook wherein only a pot's needed with the
MF8CCNs in a design there.

Thnks for the read OMs

Marty aa4rm

PS... now that I've got ur attn, anyone know a 'filter' that hunts
out a hetrodyne freq. and nulls it automatically?

>

Please don't take this as a rant:

I think you need to start considering PayPal a "value added" service.
They add value to your item. In my (very non-scientific) research (I've
been on ebay since early 96, when they were still called AuctionWeb) I
truly think they add more than enough value to pay for the service. The
radio you note above at a $50 sales price might only bring $40 if you
don't have that Paypal logo on your auction. I know I will NOT bid on
an item if the seller doesn't take Paypal (unless it's rare and I really
really want it). I know there are lots and lots of people that feel the
same way. I buy and sell quite a bit on ebay, and I truly believe the
value of the paypal logo far outweighs the cost.

Good luck and 73,

Dave

They exist. They've been described in QEX or QST, but I can't remember the date. It requires making an adaptive filter on a DSP that looks for highly correlated data and nulls it out. Supposed to work very well.

I think I've seen ads for such things, but my personal radio collection only includes things that I built or things with vacuum tubes, so I can't give you any specific information.

>
> -BM

read carefully: $5 for delivery

then final value fee(say -$2)= $35.75
Then time packing and driving to the PO + Gas - $5 = $30.75

$35 - 5 = $30

Yes, they are used for rock music to get the vocal monitors loud over loud backline setups
They hunt constant frequency's and sharply notch them out, monitors engineers best friend.
I personally never tried them on a radio, may not be enough cut like a good receivers manual notch filter

Hi, Marty

I'm the happy owner of a "Magic Notch" filter, which goes
between the receiver audio output and speaker. It has a
built-in 2 Watt audio amplifier, and requires a 12 VDC wall wart.

Per the manual -
"It has a switched-capacitor active filter which is scanned through
the audio frequencies, and stops scanning when the output drops.
The filter then phase-locks to the interfering signal and tracks
any varitions in its frequency until it disappears."

One nice feature is a green LED indicating power on, which turns
to steady red when the filter is ready to notch out a heterodyne.

The filter is a small grey box, with a bypass switch and a phone jack.
It was a product of "j-Com", but I bought mine from Ramsey
Electronics, Victor NY, who I think took over the j-Com line.

They also made the much more complicated "W9GR DSP II" audio
filter, which includes an automatic notching filter,
and was featured in Sept 1992 QST.

73,
Ed Knobloch

I have an opportunity to trade an ic 718 for a pc 500. I am most interested in cw qrp. Does the pc500 have a good cw layout? Is it a decent trade off. . .100watts vs. 15watts but more cw amenities?

Actually they used to. Then the CC companies forbade it in
their merchant contracts -- everyone had to be offered the same price
so the card companies wouldn't be at a perceived price disadvantage.
Hence, in covering his CC costs, the merchants collected frpom
everyone regardless. For a while, some gas stations offered a
discounted cash price, but that didn't last long either. I do notice
that Exxon stations in California still manage to add on a fifty or
seventy-five cent surcharge for non-cash purchases. No idea what the
legal status of that one is.

Was there a T-4C?

There was a T-4 "reciter" which was a transmitter meant to use only the VFO from the matching receiver because it did not have its own VFO. I'm not aware if it lasted until C-line days.

T-4X* series were complete transmitters with an internal VFO.

The T-4X was the original transmitter of the 4-line that came out in 1964.
The T-4XC came out 10 years later in about 1974 and had some solid-state
circuitry.
They are the same basic block diagram but the circuitry is considerably
different.

The weather forecast is excellent for Friday - hope to see you there.

Come to the HCRA's 4th Annual Tail Gate party in Feeding Hills, MA. The tail gate party is a nice affair held in a newly paved parking lot behind the Feeding Hills Congregational Church.

At least one commercial vendor will be on hand. John Bee of Quicksilver antennas will be displaying his Anderson connectors and accessories, antenna accessories and portable antennas. See an example of his wares at: http://www.qsradio.com

Pack up your stuff and bring it out for quick sale, or come over and find a bargain!

Music provided by Jx2 productions. Coffee & Donuts, raffle prizes and also our regular club meeting. Here's the details:

Time: 6:30 PM
Date: June 4th, 2004
Place: Feeding Hill Congregational Church
21 North Westfield Street
Feeding Hills, MA 01010

Admission: FREE for buyers!
$5/space for tailgaters.

For additional information contact Dave, KB1MU mailto:kb1mu@charter.net or 413-596-6605 or visit our web page at http://www.hcra.org

I look forward to seeing you there,

Jim, KK1W

3230. T4X relay needed

Has anyone ever fooled around with the band change drum/pulleys with the Collins 51J/R-388 series of receivers? It seems I've acquired a 51J-2 that the band is way off. Unfortunately, I do have a manwell, but have been able to figure out a few things by myself.

The way it's working now, I have applied spring tension on the band drum. It'll go 180 degrees one way, then do an about face and go 180 degrees the other way. It seems the way I received it, the pressure spring came loose and was riding on the graticule!

Any information on how I can correctly align it will be greatly appreciated.

Regards,
Joe Cro N3IBX

The main thing with this scheme is the initial starting position of the dial drum assembly. This gives you the reserve so you don't "run out of dial/drum string" when actuating the band change mechanism. It's been several years since I've done one of these receivers, but it shouldn't be too hard to figure out, at least without a few tries. I don't know if the BAMA website would have this information; the technical manual of this receiver is quite a few pages.

Tnx Ed, et al.

Duly noted are the "magic notch,' the Datong FL1/3, & the "monitor's pal"
hetrodyne hunter-killers.

Tnx

But, still haven't got an answer about the Rad-Shark's guts & possible
mod. But perhaps that's a futile quest.

Why do I ask at all? Well to replace the lost adjustable-peak audio
filter in a Navy RAL regen. That's why.

Again, tnx

Marty

3244. Drake AC-4 question (silly?)

Hi all,

This is probably a silly question... be gentle...

I'm refurbishing the Drake AC-4 power supply that goes with my TR-4C/RV-4C station. Is there any reason for me NOT to install a 3-wire line cord in place of the old 3-wire cord? I don't care about the unit being "concours correct". I am just concerned that there might be some obscure reason, like AC hum problems or something. I've installed 3-wire cords on Heath, Swan, National, and other supplies without problems, but this is the first Drake supply that I've ever had to do any work on.

Do it. Be safe. Just make sure that you get the right
size/configuration for the line cord & Heyco strain relief (e.g. don't
use a flat line cord in a strain relief made for round cord).

regards

Hi Group

Buddy of mine has an AGS-38 receiver he wants me to look at. It smoked
last time he turned it on. Can anyone direct me to a schematic for this beast ?

BTW, the plate on this receiver says it was made by American General
Trading Company Limited, manufactured for AGS in Japan.

Have a James Millen antenna tuner, 92201. This is the 300 watt model but will take considerably more. 10-80 meters, panel is excellent, and included is the rare (yes, it is rare, hi) original owner's manual. Tuner can also be used between a solid state rig and a linear if the linear doesn't have an input circuit. $105 plus shipping, continental US only, please.

73s,

Evan

3260. Re: Collins 51J/R-388 band change drum/pulley question:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-05 14:46:51 UTC
From: Joe LeKostaj <joe@falseaddress2004.net>
Message-ID: <joe-6237F2.09464905062004@news1.prserv.net>
Source record: 23421

Try this method, paraphrased from page 84 of the R-388 tech manual TM 11-854:
- Detach the drum cable from the drum pulley, but keep tension on it so it doesn't slip off the bandswitch pulley which is down behind the front panel.
- Set the band switch to the highest band (29.5 to 30.5 Mc)
- Turn the drum (and hence the drum pulley) about half a turn and hold it against the tension of the spring.
- Run the cable up to the drum pulley (its front edge, closest to the front panel of the receiver) and work it around the pulley one and a half turns or more as required, before attaching the end to the drum pulley. Now the drum should have the correct tension.
- Loosen the setscrew in the hub at the opposite end of the drum. This requires one of those small Bristol wrenches. Align the drum so the 29.5-30.5 Mc scale shows through the window. Tighten the setscrew.

It might be good to have a helper hold the drum tension while you wind the cable around the drum pulley.

FYI, TM 11-854 can be downloaded free of charge from http://www.kg7bz.com/Manuals.html (thanks to August Johnson, KG7BZ).

Source record: 23426

All:

If this is the wrong group for this question, please excuse me.

I am going to have a kitchen rebuilt, and the contractor is suggesting six overhead halogen lights. He also has suggested halogen under cabinet lights. All of these lights would have dimmers installed.

My question..Has anyone ever had these put in, and do they generate much interference. I know I have a halogen light near my rig and it generates lots of hash, but the shack is on the third floor and the kitchen on the first. Any ideas about the QRM?

thanks

Kevin

Since Drake recommended grounding the chassis. There should be no problem
connecting the chassis to the ground on the three wire plug.

There is a company called"Preval" available on internet ..You can take
the cabinet to a PPG paint store,they will check and mix paint for
you,Usually 1 pint min..the preval spray unit works great,not too
expensive and easy to use..works for me.. Harold W4PQW

Source record: 23434

Most dimmers are very bad. They shut off the cycle so quickly that they become radiators along the power line.

If you want a semi-dark kitchen, just put sun glasses on. Your radio will appreciate it.

Some dimmers can be heard blocks away. I have chased down the noise for friends.

It is possible to buy dimmers that do not emit significant radiation. Usually, they are advertised as such and more expensive.

The under cabinet type lights are often low-voltage designs, and to avoid a
large tranformer are operated by a switch-mode power supply. This has the
potential for being noisy RF-wise.

I bought a Grundig "17 Transistor" radio..with push button selection
of the band. The only identifying nr (that i can see) is 17
TRANSISTOR.
Where might the model nrs be hidden on this radio.
Can anyone help me ID it?..also..Im going to hook it
up to DC voltage to try it out.
Bought it at a yard sale for $20.00
any experts out there who might know anything about it?
I can take a few digital pictures and send them along/post them.

In Canada, many of the better dimmers sold have a "CE" label on them, meaning that they meet a European specification which is less tolerant of RFI than the specs in North America. If you can find them, buy them instead.

3289. RME 4350 weak BFO?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-07 06:37:54 UTC
From: John D <johndNOSPAM393@yahoo.com>
Message-ID: <10c8338566i6nf0@corp.supernews.com>
Source record: 23350

I recently aquired a nice RME 4350 receiver. I cleaned a lot of dust & dirt out of it. Cleaned & relubed the vernier tuning knob(some of the balls are missing), tightened some slipping shaft couplings, put a drop of oil on just about everything that moves, powered it up very slowly with a variac. It seems to work fine except the BFO seems weak. The RG gain has to be reduced a lot and the AF gain has to be high to tune any SSB or CW with the INJ knob on max. I swapped the tube and no differance. It doesn't seem right to me but I just don't have enough experiance SSB/CW receivers to know. You can get a good strong audio from a AM signal but the SSB/CW is wimpy. Is this normal for this radio?
John

Hi John,
The SX-88 I worked on was similar, at least as far as having to reduce the
RF gain in order to make CW sound right. I checked everything and then read
the manual- which said to reduce the RF gain for CW! However, in SSB
position, CW sounded great w/o the need to reduce the RF gain.

Is it an SSB receiver? I can't place it at the moment.

Remember, that until the mid to late fifties, there were no SSB receivers.
There were receivers with BFOs, that of course allowed for CW reception.

But when SSB came along, those receivers were less than perfect. The
ratio of the BFO to the incoming signal was not correct, and so it still
sounded like an overmodulated AM signal.

So all the books told you to reduce the RF gain, turn up the audio gain (to
compensate) and this way the BFO is much stronger relative to the incoming
signal. If the receiver didn't have a product detector, you had to do this.

It was only as receivers designed for SSB that this need went away. They
added product detectors, and the BFO was in proper ratio to the incoming
signal, so you did not need to attenuate the incoming signal to get useful
operation.

From: COLIN LAMB <k7fm@teleport.com>
Message-ID: <LSZwc.24781$Tn6.3708@newsread1.news.pas.earthlink.net>
Source record: 23357

The 4350 does not have a product detector. The variable injection allows a small variation, but I recall that reducing the rf gain is still necessary.

RME sold a separate product detector that plugs into the back.

The problem isn't the lights, the problem is the crappy switching supplies
used to get low voltage to run them.

Ask the contractor if they are using low voltage lights, and if so what
sort of transformer they are using. Make sure they use a standard
transformer and not a switching device.

The dimmers can be a problem. THey used to be terrible, but some are quieter now. With the HF noise floor varying with time of day, etc - you could raise the noise floor somewhat, and might not notice it for a while. Some of the screw-in flourescent converters have oscillators near LF, VLF band. These can be bad too... How about under cabinet and overhead florescents? They use considerably less power than halogen too.. With anything you consider..i'd run some tests with the same model he plans to install at close quarters to your rig. Wrap a wire around the bulb or tube..and connect to the receiver antenna.. Turn the light on and off... Hear anything??

Cheers

3305. FT TMC TAC-1 for BC-939A/B Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-07 21:05:04 UTC
From: K3HVG <jeepp@adelphia.net>
Message-ID: <O8edne9mqeB9S1ndRVn-gw@adelphia.com>
Source record: 23366

The T-368 I just acquired came with a TMC model TAC-1 antenna tuner. I'd like to trade this tuner for the one normally provided with the GRC-26D, that being the BC-939A/B tuner. The TMC tuner is, arguably, a better tuner; it does balanced as well as unbalanced loads. The BC-939 does not handle balanced loads. Although both tuners will work with the T-368 and sort of look the same, I'd like to find the "right" one. The TAC-1 I have is in respectable shape. The only caveat is that one of the RF ammeter thermocouple units was taken apart(?). The circuitry is all there and there is continuity, however. It may well work OK, once re-mounted but I can't guanantee it. Other than that, all's fine and I have the book.
Thanks much. de K3HVG

Does anyone have a PCB extender card available for the 3020 series
ITT/Mackay Marine receivers?
Nearly all were supplied with one but few were kept with the receivers....

I'm also looking for some DZUS screws for the card rack covers.

tnx,

Doug/WA1TUT

Just wondering if any one out their has any information, a schematic
or manual for a Western Electric GF-11 Aircraft Transceiver. I aquired
one in abosuletly perfect condition, never been used, but It has no
cable manual or schematic. I tested the tubes and they work and the
finals look perfect. But I need to know how to hook it up to a key and
a mike and use it on 80m. any help is much appreciated you can email
me any information to kb3jjy@att.net; nnn0iab@att.net;
alpha21beta@hotmail.com
thank you

Doug,

I can't help you with the extender, but you might find appropriate
DZUS fasteners at a local small airport. Find a mechanic at an FBO
that services light aircraft.

Good luck!

Very 73,

Tom AB9B

3319. Old Callsign was W10XEG ???

Had an inquiry that sed his Dad's call was W10XEG

Before 1946 -- I think there were just call areas one thru nine.

Sometime around 1946, the 10th call area was established -- the zero district, but was this ever the W10 area ??

Also the X in the suffix -- I thought was for experimental stations ???

Any old timers recall ??

Thanks

Post any answers here please

Bill Orr had a column in either Ham Radio or CQ with a W10 card. They are rare, but were issued for some special purpose. I think it may have been pre war. My memory is fuzzy, but it may have been for shipboard use.

X calls were often issued for experimental stations.

I have the right to refuse PayPal due to their charges. If someone INSISTS then I have the right to refuse their business or ask for reimbursement of the charges.

I ran a substantial mail order business and some people wanted to come and pick up their orders. Not only did I not charge them shipping, but I gave them a 5% discount because they were not using our shipping "resources" which were normally built into the product price.

My objection is that PayPal/eBay wants to control my freedom of speech by telling me what I can and cannot say. I prefer full disclosure and let the buyer make their own decision. Of course, this hurts them as then everyone sees that they raise the cost of doing business (regardless of the merits of their service).

I think his memory is a little off. Zero land
has always been zero land.

Maybe it was an SWL callsign - I seem to
recall back then one of the magazines had
SWL registries for non-hams, and used a
funny format...

Thanks.
I had gone onto the DZUS website and they indicated that their
products were used in the aircraft industry and in stock car racing.
I didn't see any mention of the small fasteners that are used in
electronic applications.

However, there are a couple of small airports near me and your idea is
a good one.

I wondered if it was a WWII call for some reason. Obviously there was
no ham radio, but wasn't there some CD or emergency service that was
active during WWII, on the VHF bands? I can't say I've ever seen mention
of a W10 callsign, but perhaps it was during that period?

In the wartime QSTs, they talk about the WERS (War Emergency Radio Service ?)radio service. It appears that hams in Civil Defense were involved. They had callsigns akin to what you've related.

It appears to me to be a non-ham station license. It could be for a commercial
base station or repeater, or almost any experimenal purpose.

Don

A further search of some 40's QSTs reveals that WERS NCS stations appear
to have 4-letter calls, such as WJUY and subordinates would be WJUY-1,
2, 10, 11, ad infinitum. These calls don't look like the one originally
posted, however.... Dunno?

3337. 'M.E.C. Test' miniature DHT, anyone ID it?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-10 11:24:27 UTC
From: Andy Cowley <andy.cowley@uwe.ac.uk>
Message-ID: <Hz3Bor.EtD@bath.ac.uk>
Source record: 23298
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Dear RATS and others,

Can anyone ID this thing or give me any info?

http://m3abc.pwp.blueyonder.co.uk/Mec-test/mec-test.html

It's a directly heated triode for battery operation, I think.
The 'M.E.C. TEST' label colouring reminds me of GEC/Osram
labels but that may be just coincidence. Does anyone know
what MEC test is? I thought this might be a hearing aid
valve, but most of the later wired in ones were pentodes
ISTR and all the examples of early thermionic hearing aids
I can find on the web use wire ended valves - DF5x series
or U.S. equivalents. The base is not B4/British 4 pin but
a much smaller thing.

It arrived in a box of junk from a radio rally/ham fest.

best

Andy Cowley

3338. Re: Old Callsign was W10XEG - Some info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-10 14:09:10 UTC
From: Keyboard In The Noise <KITN@cat.net>

Source record: 23299

The originator of the W10XEG question supplies the following new info:
Actually, the W10 call is most likely a commercial call. There were several 'repeaters' that were used very early in the establishment of the radio, and then commercial television networks - it may be one of those. The X is for experimental, no doubt. My Dad was very active with RCA very early on. The first experimental TV signals in NYC were on 21 MHz, broadcast from the Empire State Bldg - my Dad was chief engineer for the transmitter. One of the many experimental transmitters he put on the air was W10XEG - I just have no data about it at all.

I have the following books for sale. I will ship via media mail to keep costs down. Prices do not include shipping. I will ship overseas.

Fundamentals of Single Sideband - Collins Radio Book.....$40 plus shipping
This is the classic Collins Radio SSB book. Excellent condition. Only marks are a former owners name on the cover.
http://members.cox.net/radiostuff9/collins_ssbbook.jpg

Book - 200 Meters and Down by Clinton Desoto.....$25 plus shipping
This is a reprint published in 1981. This is a fascinating book about the early history of ham radio up until 1936. This book is in excellent condition with no markings at all and clean pages.
http://members.cox.net/radiostuff9/200metersanddown.jpg

Care and Feeding of Power Grid Tubes - Eimac Book.....$20 plus Shipping
This book published in 1967 covers theory, technical data and suggested circuits for transmitting tubes with an emphasis on Eimac transmitting tubes. The cover is shopworn. The insides of the book are in excellent condition and it still has the "Tube Performance Computer" on the inside back cover. This is a plastic transparency that calculates performance.
http://members.cox.net/radiostuff9/eimac_book.jpg

RCA Transmitting Tubes Technical Manual.....$15 plus shipping
This book published in 1962 covers all RCA transmitting tubes prior to 1962 and has theory, technical data and suggested circuits for transmitting tubes up to the 4 kW input power level. The cover is shopworn. The inside pages are in excellent condition.
http://members.cox.net/radiostuff9/rcaxmittubebk.jpg

1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/handbook95.jpg

ARRL Book: Your VHF Companion.....$5 plus Shipping
http://members.cox.net/radiostuff9/vhf_book.jpg

ARRL Book - The Mobile Manual for Radio Amateurs.....$10 plus shipping
1962 edition. Cover is a bit worn - inside pages are excellent.
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL Book - FM and Repeaters for the Radio Amateur.....$8 plus shipping

1962 edition. Cover is a bit worn - inside pages are excellent.
http://members.cox.net/radiostuff9/fmbook.jpg

Thanks for looking.

There were never any 1X4 callsigns issued. If the first letter of the suffix started with X, then it was an experimental station. I think this ended in the 50s. Early TV stations in the 30s had calls like W2XGE and so on. I always thought it was odd to have an amateur type call attached to experimental commercial stations.

I think the 10th call area (0) started in the late 40s. If you were in the new 10th district but had a W9 call, you received a W0 call with the same suffic as your W9 call had.

Hope this helps,

Thanks to all who answered -- seems to narrow down to an experimental
commercial call sign as the person that inquired sed his Dad had the call
and was also a station engineer at an early NY TV station.

Coincidently he was a Ham also maybe held 2NJ back in the 20's

Had this report regarding 2 digit callsigns

However, when ITU held their plenipot meeting here in 1998, we were assigned the special-event calls N98ITU and W98ITU. Those are the only examples I know which included two numeric characters in a US amateur callsign.

That callsign _would_ make sense as a TV repeater station. Many current-day
TV repeaters use a 1x3 format like that, with the digits indicating the
channel the repeater output is on. The State of Iowa runs a bunch of
such repeaters, for their educational television network.

HAH! Look up the history of channel 5, Ames Ia. Early on, Iowa State
University used W0YI, for their television station, which _is_ the callsign
for the amateur radio facility there. The eventual commercial callsign WOI
is a direct derivative of that amateur radio callsign.

New program CHOKEBAL.exe

Design and performance of a choke balun wound on a ferrite ring in
conjunction with a balanced transmission line and antenna.

The percent current unbalance on the line is estimated and how it varies
with frequency, line-length, etc.

Sorry, this program does NOT tell you how much power is radiated from the
feedline.

Program size 37 kilo-bytes. Download CHOKEBAL in a few seconds from website
below and run immediately. It's free issue.

I'd like an extender and some covers and screws, too, for _my_ 3020.

Anyone who has a spare VHF Reference card, _PLEASE_
consider selling or trading it to me.

That's _this_ critter:

VHF Reference Card,
Part No. 600586-536-001,
for ITT-Mackay Marine 3020A
(a.k.a. 3020B, EB-3026, EB-3028, and
DEBEG 7200).
Will trade for my extra LF Reference Card,
Part No. 600587-536-001 Issue M,
or buy if the price is right.

That's about all I need to get this receiver running.

More info on the ITT/Mackay 3020 at http://mikea.ath.cx/3020/
for anyone that's interested.

W0YI is considered a 1x2 call

You are correct at one time the Y suffix was for schools colleges and
universities -- some are still extant today

See Stanford ARC W6YX (1922) is Stanford,

W9YB (1920) is Purdue

From: Roger Basford <Basford@btinternet.com>
Message-ID: <knHnh1B0gLyAFwcu@btinternet.com>
Source record: 23311

Hi,

Recently acquired a WWII (1944) airborne TX made by Doolittle Radio Inc. of Chicago for the USN. This has a maker's plate on the cabinet marked GS-5 and GWY-2A on the front panel. It's a single-channel AM/MCW TX with a 1625 in the final and a pair of 6L6s in the modulator and from the PA coil size I'd guess the operating band is possibly 20 -30 Mc. Power is 28 volts DC but the dynamotor supply must be external. There are four Simpson meters grouped on the front panel, quite a distinctive look.

I haven't been able to turn up any info on the Net and suspect this may be a fairly rare beast, although I have heard of another example local to me. Can anyone help with basic info/schematic? Photos available.

TIA & 73,

http://members.cox.net/radiostuff9/johnsonspeedxbug5.jpg

Unbuilt Heathkit HD-1250 Solid State Dip Meter.....$225 plus
Shipping
This unit covers 1.6 to 250 MHz with 7 coils and runs off of a 9 volt
battery. Everything is there and still in the original packing. The only
issue and this is a problem with all of these units is that the black
foam in the case has disintegrated. The new owner will need to clean
this off with a solvent. The coils have been removed and placed in a
separate bag. I have had several of these units and they all have had
this problem no matter what part of the country they have come from.

Special issued calls maybe? Nothing like that in my 47 Callbook.

I'm not sure how "early on" you mean but from my 1934 Callbook you'll notice
it's W9YI not W0YI since there was no tenth district:

W9YI-Iowa State College, Edd R. McKee, 2119 Country Club Blvd., Ames Iowa.

However by my 1947 Callbook the switch to W0YI had been made and as another
poster pointed out they kept the same suffix:

W0YI-Campus R. C., Eng Annex, Iowa St. Coll. Ames Iowa

Virtually every Y call in my 1934 Callbook is a school. But they got away from that by the 1947 Callbook where the vast majority is not.

>See Stanford ARC W6YX (1922) is Stanford,

In 1934 W6YX is listed as "same QRA as W6FBU". W6FBU is listed to James M Sharp Jr. at Stanford Eng. W6FBU then also lists W6DMY. W6DMY lists the home address of Sharp, apparently the Stanford station trustee. Probably more than you wanted to know, but I found it interesting... ;)

RE: 2NJ type calls up to 1928
With the advent of the Radio Act of 1912, the first Amateur Radio License is issued. The call letters assigned to the United States were NAA -NZZ, WAA - WZZ, and KDA to KZZ (KAA-KCZ was assigned to Germany and was not given to the United States until 1929). The somewhat puzzling Amateur calls like 1AW, 6OI, 2MN, etc. is explained by the fact that Amateur stations did not qualify for international call signs. At that time, the USA was divided into nine Radio Districts so Amateurs were granted calls consisting of their district number followed by letters, the first letter was from A through W, for example, 1AW, 1TS. Recognition was given to certain land stations, X as the first letter for Experimental licenses (e.g. 1XE), Y for School licenses (e.g. 9YY), and Z for Special Amateur licenses (e.g. 8ZZ). 1x3 calls (like 1AAA) was issued to Amateurs beginning in 1914. For a list of early X, Y, Z callsign issues -- see U.S. Special Land Stations: 1913-1921.4 It was not until October 1, 1928, that the W and K prefixes were assigned to Amateurs.

After VJ Day in 1945, hams were given authorization to begin operating again on the 2 1/2 meter band, on a shared basis with WERS. WERS was terminated in mid-November. By the 15th of that month, the FCC released bands at 10, 5, and 2 meters for amateur use. The post-war era of amateur radio had commenced.

Just to throw some more confusion into the fray, in the 1937 April-May issue of National Radio News, a magazine published by National Radio Institute, a subscriber writes, "I am sending you a station card from amateur station W21OR, owned by graduate King J. Fothergill. It will be a pleasure to see my call letters appear in the ever-growing list of N.R.I. Ham stations".
Was this a misprint? Should it have been W2IOR? He was from NY.
Inquiring minds want to know.

I meant 'early in their history of TV Broadcasting'. More clear? <grin>

[Also, some ignorance on my part. "District 10" predates _me_, by most of
a decade. I didn't know it was a 'Johnny-come-lately' <grin>]

Considering when the TV station had their '50 year of broadcasting'
celebration, they would have to have been doing a fair bit of the early work
under the W9YI call-sign.

I think they were the 1st operating TV station in the state. (What is now
WOW-TV in Omaha seems to have been on the air around 15 months earlier.)

WOI was a very unusual operation. It went from early experimental to a
full-blown 'for profit' _commercial_ station (it was the ABC network affiliate
by the late Fifties, probably earlier), owned and operated by a State
University. The students that were _good_enough_ would manage to get jobs
(_real_ jobs, not work-study, or an 'internship) there, as students. Then
they got a _real_ education, in addition to what was taught in the classroom.
Actually, the station, and the teaching department got along quite well.
Everybody came out of that program with a solid understanding of 'real world'
operations.

The Campus Radio Club pre-dates experimental television, by a fair
number of years. It _is_ an engineering school, after all. <grin>

Yup. R.C. is the "Radio Club". Still using the same callsign.

The TV station got their own license after the tenth district was created, They were broadcasting TV under the W0YI call for a non-trivial period. They wanted to maintain, as much as possible, the 'name recognition' they'd built up -- so they looked at both derivatives of W0YI -- WOY, and WOI -- and settled on the latter, for a number of (not terribly compelling :) reasons.

>W0YI is considered a 1x2 call

Yup, there are a a fair bunch of those out in Central Iowa. The "Amateur Radio Society" in Des Moines has W0AK (one of the few I still remember, having been away from that locale for 25 years). There was one guy out there that got freakishly lucky with his initial callsign assignment, and got a 1x3 where the suffix was his initials. In the days before you could request a particular callsign, 'if available'.

>
>You are correct at one time the Y suffix was for schools colleges and
>universities -- some are still extant today

I dunno about _that_. <grin>

I used to know callsigns for a grand total of _two_ University ham stations. Iowa State, and Northwestern University (W9BGX). Not enough data to draw any intelligent conclusions from. <grin>

Just did a little rummaging Here's some other 1x2 'Y' university 'Y' callsigns:

University of Wisconsin W9YT
University of Illinois Synton Amateur Radio Club W9YH
University of Minnesota W0YC

And, last but not least, a non-Y one that _has_ to be way up on the list of 'confusing' call-signs.

University of Iowa Amateur Radio Club W0IO

The bidder thought it was worth $50 plus P&P. That's what he offered and what you accepted. The fact you live miles from the PO and drive a gas guzzler and have to pay E-bay, PayPal & co. and are not much good a scrounging packing is not the buyers problem. If you think the radio or whatever is not worth selling at $50 (you get $30) then you should have put a higher reserve on it. E-bay rules are clear and fair. You know what you're getting into. If you don't want to sell at the price bid then don't offer to. Your error is in thinking that you are going to make a profit of the final bid price. For sure the buyer didn't bid you an extra $20 for fees and stuff. And don't tell us you never had an item go 2 or 3 times what you thought you'd get. Would you offer the buyer a refund because of that? Thought not.

The buyer pays, E-bay gets some, PayPal gets some, USPS gets some, IRS gets some, you get what's left. That's how it works. You could certainly add something for packing and handling but you should really put that up-front in the item description. You know in advance what it will cost you to pack. Then add shipping at cost. Something like "Packing and Handling $10.00. Shipping at cost by USPS/UPS/etc." You really have to let the buyer know what he's getting into and stick to E-bay's rules is all.

best

Don't put it in your title. Put it in your description. When you put
it in your title, and some whiny do-gooder or, someone selling the
same item who hates your competition sees it, the can report it as
keyword spamming, and ebay will pull your ad. It's important to
realize that Ebay never finds these on their own, they only become
aware of them when some loser reports them. Then they pull them.

3375. Old UTC Transformers - Black Stuff

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-12 01:09:16 UTC
From: machine_nine@yahoo.com
Message-ID: <7f446fbd.0406111709.5b32e59e@posting.google.com>
Source record: 23334

Hi;

I was cleaning the terminals up on some old UTC LS transformers and noticed some hard black/brown stuff around the terminals. My first thought was that it was old flux or maybe paint(like manufacturers sometimes put on terminals after they are wired in a chassis). After heating the terminals, I noticed that it smelled like rubber. I suceeded at cleaning most of if off, however, when I heated the terminals to melt the solder, more kept comming out of the terminals(the terminals are hollow with the coil wires comming up through). So I'm assuming that this is potting compound "wicking" up through the terminals.

I've looked at many UTC transformers(with the same hollow fork terminals) and notice this on their terminals also.

My question is can this contaminate the connections of the internal wires where they are soldered up through the terminals? I checked them with my meter and everything seems fine.

Thanks!

3377. TS-520S question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-12 11:38:10 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <hY2dnTWDKPWGdlfdRVn-gw@comcast.com>
Source record: 23337

Morning all,
I snagged a TS-520S yesterday.
It has 1/2 output, and suspiciously, the white lamps seem dim.
HV seems to be at 950V (with heaters off) and with heaters on 925v in tune
(ssb)
In Tune, it drops to875v, at 125mA
At 125mA I get 55 watts out.
Driver tube swapped out and seems to be good, as I get the same results with
another tube.
Was there a 50watt switch inside the radio?
I seem to remember that there was an internal 50/100 watt switch.
Don't have a spare set of finals.
Power seems consistent on all bands with 50 watts out.
Any comments?
--
Best Regards, Frank

>At 125mA I get 55 watts out.

Did you get the manual with it? Yhe 125ma load seems light to me, so maybe your low power is as simple as tuning. Will it load to 250mills?

And is this really a problem? Is there any skin off you nose? Why does this concern you? I do this all the time because if I list a radio widget under it's proper area maybe I'll miss half the people looking for a radio widget. I list under old radio antique and any other name that would be proper. More internet cops we don't need and I certainly don't need you acting like one. Let eBay police the real crooks. The people that steal money from people by misrepresentation or simply not sending a paid for item. Lets not worry about the little things but always give negative feedbacks for any non payer. Give good feedback where it's due also.

In 1930 there were only nine call areas -- W10 appears over and over again
in the early TV call sign issues as portable.

X was back then experimental only

The original poster sed his dad worked for RCA and conducted early
television experiments in NYC and had a call plate of wood W10XEG - hence
his question of the significance of the call.

So I jumped with all four feet on that conclusion -- perhaps you have
better one
Love to hear it as well as the original inquirer who is not on the
newsgroups

I undertook all this as a matter of sherlocking the W10 prefix, I get
intrigued with historical puzzles such as that.

And learned something in the process

Hi All,

I acquired an R-390, that I thought was complete. As it turns out, it is missing the Coupler "washer" that would fit between the back of the tuner assembly and the crystal-oscillator. Does anyone have one of these available, or at least can advise me as to the correct part name. Wasn't sure if this part
is a "oldham coupler", or something of the sort.
Thanks, Dan

I think your Q. will be very quickly answered on the R-390 mailing
list. Take a look at <http://www.qth.net> for information on the
lists to which you can subscribe from there; they include the R-390
list.

Good luck finding that input coil assembly. I have an S-40B - in fact my first receiver back in 1957 - but am not parting it out. I was wondering, what shape are your "caps" in? I haven't turned mine on since 1981 and assume it may have problems in that department.

If you are using the "tune' position, it may have a built-in power reducing
circuit to allow the user to tune-up the TX without burning the 6146B's.
Try checking the output with a CW key-down......

Is that the portable, the one that came out in the late sixties or
very early seventies?

If so, keep in mind that it becomes a double conversion receiver on
that top band, and maybe it's not an alignment problem but that the
conversion oscillator is not working (the mixer stage for the extra
conversion is a stage of straight amplification on the rest of the bands).

Michael, Robert,
That's the one. I have the manual and schematics from BAMA. The second oscillator appears to be working, according to a digital radio I use as a "sniffer". I'm still going thru it, but had to stop to replace the dial cord. Two steps forward, one and a half back... some of the R's and C's are off the mark, too, and have to be replaced.
I suspect the slugs have all moved... it was being pitched when a friend caught it a foot above the garbage can or maybe in the can. I'm hoping to find out how to start alignment from scratch. It appears the coil slugs were all factory-set when it was sent out as a kit, and those settings are off.
Cheers,
Nelson

From: Brian Hill <releif@last.net>
Message-ID: <10cq32oluufgaba@corp.supernews.com>
Source record: 23275

Hi all. I have a very nice SX-11 for sale. I just aquired two of these and I need to get rid of one. Its almost complete but will need the small anti backlash gear. The one on it has a striped tooth but works ok. It just won't last. This is a very common type and easy to get. I've done all the cosmetics i.e. The hard stuff!- refinished front panel, chassis cleaned etc.. and replaced the caps. It will probably need a minor tune up here and there. I've just done enough to determine that its not a basket case and I hate selling junk. Two of the knobs have the pointers missing which is common on these because they're clear plastic and they get brittle. Two little holes were driled at the 0 and 100 mark on the dial? but its a clean unpitted dial and still looks nice. The cabinet finish is excellent for its age with minor scratches. It has the bottom chasis plate but will need rubber feet. The original speaker terminals are gone and I made some but originals are common standard screw type and easy to find. Any other question just email me. I think whoever gets this will be very happy. It is a very above average set. $400 or best offer + S.H.

P.S. The front panel support rails don't show in the pics but they are on it now.

>> It is the most reactive metal, if I recall correctly.

Not exactly, but close. Magnesium is at the top of the list when
discussing corrosion.

>> In air, Aluminum instantly oxidizes at the surface, but this
>> obviously doesn't completely protect it.

This is true primarily for pure aluminum. If you see raw sheet metal
stock with an Alcad marking on it, it is aluminum alloy with a thin
plating of pure aluminum for protection.

>> However, I always thought that with time the oxide grows
> thicker
>> and unevenly causing the pitting.

Since most aluminum products are alloys, there is a strong possibility
for galvanic corrosion any time it is not protected. Even common tap
water, with its mineral content, will aid the corrosion process. Google
"galvanic series" for more info. Here's a link to one table:
http://www.corrosionsource.com/handbook/galv_series.htm

>> Perhaps there are other mechanisms. Sulfur in the air can slowly
>> vulcanize rubber. Perhaps other oxidizers attack the aluminum as
>> well...

As stated above, most aluminum corrosion is galvanic in nature.

O have one with the same symptoms. Doing a google search I found
someone had poasted a webpage with numerous Heathkit fixes, including
this one. Sorry I can't remember it to post it here, just do the
google and you'll probably find it.

I just saw a 389 on e-pay go for about a grand. The CV591 alone is
worth far less, and I'd keep it if you have a 390 or other BA with a
455 kHz IF.

I don't know, but does the 389 have 455 kHz output? If so, then the
591 I would think would be worth keeping.

3420. GRC9, WS38, WS46, R1155, NRD-525, S27 FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-14 12:12:51 UTC
From: military1944@aol.com
Message-ID: <20040614081251.09303.00001137@mb-m03.aol.com>
Source record: 23281

FS: GRC-9, S-27, WS38, WS47, R1155, NRD-525

GRC-9 HF tx/rx with dc mobile psu, leads, whip holder, mobile mounting tray and set front cover. £120

2 x Hallicrafters S-27 HF/VHF receivers. Set One: In need of restoration but front easily removed and as the lettering is engraved then an easy job to restore. New mains tranny and audio o/p. Set Two: good front, rewired and new components. Orig mains tranny, plus lots of other bits, missing the 3 ceramic front end valve holders (have replacements to send with set) The two would make up one nice set. £100.

WS No38 Mk II, with headphones, throat mic, and junction box. All valves present, looks fine inside, untried, but having all the compents needed to make a working set or display. Offered as is for £100.

R1155 (A or B ?) suitable for restoration. All the major component are there, supply plugs, valves, caps etc. One ift has been removed ? dont know why, but theres a replacement supplied. Front had the tuning dial, faceplate and knob removed but all supplied ready for re bolting in. Condition: rx front, fair, needs a good clean and a respray as does the case, a good rub down, primed with aluminium primer and sprayed black. Decal off the range switch but a new set can be obtained off the web at various places. Offered as is for £100.

R1155B, unfortunatly, its been moddified a little, internal ac mains psu, audio output stage, and a few of the controls removed, but, it could be easily returned to cosmetic decency, while retaining the advantage of being mains powered. While it receives the Light Program fine I would be inclined to change a few if caps and give it a tweek. Offered as is for £80.

WS No46, set only, no case or acc's. Recently been working, fitted with coil pack to cover 40 Mtrs, case in good condx, one knob not orig but I may well have the one needed if I can find it !. Offered at £100.

NRD-525 General Coverage Communications Receiver Coverage: 90-34000 kHz Readout: Digital Fluor. 0.01 Modes: AM/SSB/CW/RTTY/FAX/ Circuit: Double Conversion Features: ¼" Head. Jack, S-Meter, Attenuator, NB, Mute Terminals, ANL, Line Out Jack, RIT, BFO, AGC, PBT, Speaker Output, Keypad, 200 Memories, Up-Down Tuning, Tone, RF Gain. Accessories. New Price: $999-1249 Used Price: $520-590 Comments: Memories store: frequency, mode, bandwidth, AGC and ATT. This set has the airband, 2Mtr, marine band, 70Cms options fitted.There is also available the matching extension speaker….. £300.

postage extra, collect only on GRC-9 and S27

3421. Drake TR-4C questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-14 13:12:00 UTC
From: k5dh@raytheon.com
Message-ID: <Auhzc.1$SD2.0@dfw-service2.ext.ray.com>
Source record: 23282
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Drake experts,

I have some TR-4C questions:

(a) What's the typical power output on CW and SSB?
I suspect my PA tubes are weak.

(b) Any way to modify the T/R switching circuitry
to have the microphone PTT switch control the
T/R switching directly, instead of biasing the
VOX amp tube to control the relays?

(c) Is it practical to try to upgrade the rig to
TR-4Cw standards? Are the parts available?
How about the CW filter?

(d) I know there's a mod out there to replaced the
6JB6A's with 6146's in the 4-Line transmitters.
Has anyone done this with a TR-4 transceiver?
With matched triplets of 6JB6A's going for near
$100, the cheap and plentiful 6146 might be a
good alternative.

(e) Anyone have any worthwhile improvements for the
receiver? I've printed a number of articles off
the internet on Drake mods, but I haven't found
much for the transceivers. It's mainly stuff for
the 4-Line twins.

Thanks and 73,
Dean K5DH

Boy. I could have used this in the late 60's. Dad & I had to perform
neurosurgery on both of the bal modulator audio transformers...open
windings.

Source record: 23284

Hi Gary,
Thanks for the comments. I realize the CV-591A is not worth as much as the R-389. I've seem a few CV-591A's in the past 6 months on ebay that ranged from $400-$775. I thought I'd offer the CV-591A, along with some cash, if someone was so inclined to sell their R-389. Maybe the incentive of offering the CV-591A, will intice someone to let their R-389 go. I have a CV-591A to go with my R-390A, and one for my R-391, and what a difference they make. Other than the ability to receive independent sidebands, the clarity, along with their ability to cut out a good amount of qrm, makes these units a must have for the dx'er. I really wouldn't let the CV-591A go otherwise, but I'd be willing to part with one, if it meant "closing the deal", on a R-389.

73's from a SWL,
Dan

New ham would like to purchase your old radio that is gathering dust. I need a HF cabable of 160 or 80 thru 10 meters and an all mode 2 meter so I can send CW and talk ssb until I get my general license. I need the 2 meter most and the HF least. What have you got and what do you want for it?

I have the following items for sale. Prices do not include shipping. I
will ship overseas. Please reply direct to me, not to the list.

National Type MCN Dial.....$35 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Heathkit T-3 Visual-Aural Signal Tracer.....$40 plus shipping
This unit is very clean and works great. Includes the probes and a
photocopy of the manual.
http://members.cox.net/radiostuff9/heath_sigtracer.jpg

Hammarlund FM-50A Transceiver Two Way Radio.....$25 plus shipping
This appears to be a low band 50 MHz FM transceiver which I would guess
is from the 1960's. It is missing some tubes including a 6146 final and
I assume the opening in the front contained a speaker and grill. It is
untested. Interesting piece if you collect Hammarlund equipment.
Untested
http://members.cox.net/radiostuff9/hamm_fm50a.jpg
http://members.cox.net/radiostuff9/hamm_fm50a2.jpg

Yaesu FTDX-560 Transceiver External Speaker.....$50 plus shipping

This speaker is in excellent condition and sounds very good.
http://members.cox.net/radiostuff9/ftdx560_spkr2.jpg
http://members.cox.net/radiostuff9/ftdx560_spkr5.jpg

Precision E-200-C Signal Generator.....$35 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF
outputs as well as internal modulation and adjustable AVC voltage. The
tuning dial even has a smooth vernier movement. This is a clean working
unit. It does not have probes or test leads. Includes a photocopy of
the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Vintage Fairchild "Nixie Tube" Multimeter.....$35 plus
shipping
This is a Fairchild model 7050. This is a voltmeter and an ohmmeter that
measures up to 1.5 kV and 15 megohms on the resistance scale. This is a
nice working unit and accuracy looks good.
http://members.cox.net/radiostuff9/fairchild_nixie_meter.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Oxford 15 Inch Speakers - Pair.....$45 plus Shipping
These speakers work and are in excellent condition.
http://members.cox.net/radiostuff9/oxford_spkr.jpg
http://members.cox.net/radiostuff9/oxford_spkr2.jpg

Triplett 800 VOM with Manual.....$45 plus Shipping
Very clean working VOM with original manual
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$25 plus
Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Thanks for looking.

3433. Heath Apache Help !!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-16 02:08:38 UTC
From: masoste@comcast.net
Message-ID: <40cfa9eb.256734531@news.tn.comcast.giganews.com>
Source record: 23194

I'm restoring a Heath TX-1 Apache. Everything is working great
except.... on CW there are occassional little frequency jumps up to
about 50 HZ. The frequency always returns quickly to the normal
freq. In a constant key down condition the frequency is very stable.
It only shifts with keying and seem to be worse at higher speeds.

The shift can be heard in a monitoring receiver even in standby mode
when the final is not loading down the power supply. (and all filters
have been replaced anyway). I have gone through the VFO cleaning up
bad solder connections and tightening grounds. The VFO tube has been
replaced (as have the buffer / xtl osc and driver.

Aside from the little jumps, the VFO is extremely stable. I had some
chirp, but it cleared up with the 6AU6 VFO tube replacement.

Any ideas anyone???? Please e-mail to : lostmessages@comcast.net

Looked at ceramic and mica capacitors in the VFO and thereabouts?
There have been some threads recently here and/or on the R-390 list
about capacitors sometimes doing abrupt small changes in value, and
your problem sounds much like that.

I am also a new owner of an old TS 520 SE and I am looking for that same CW filter. Ebay has them from time to time, $70 to 90. Haven't seen them much anywhere else, except new through a secondary vendor but those are even more expensive.

I am contemplating to try a homemade audio filter circuit and see how I like that.
Let me know what you come up with.

Hello Everyone,

Just wondering if anyone happens to have any of the following peices of old Tektronix test equipment that they would want to get sell or rid of:

- Tektronix 128 Probe Power Supply w/ P500CF Probe
- Tektronix 107 Square Wave Generator
- Tektronix 130 L-C Meter
- Tektronix 132 Plug In Power Supply
- Tektronix 133 Plug In Power Supply
- Tektronix 181 Time-Mark Generator
- Tektronix 1121 Amplifier

- Any 500-series scope plugin's (Type A, CA, E, N, P, Q, R, S, Z, O, etc)

Also looking for a tektronix 545A, 551 or 555 Oscilloscope.

Thank you for your time,

Regards,

Chris

3438. Radio Testing At SeaPac

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-16 05:50:37 UTC
From: Louis Bybee <louistroutbybee@comcasttrout.net>
Message-ID: <McRzc.29519$Hg2.17962@attbi_s04>
Source record: 23199

If you will be attending the SeaPac Ham Convention at Seaside, Oregon this weekend be sure to stop by the Cascade Amateur Radio Society's booth and have your radio, or one you intend to buy tested. A complete test of all operating parameters will be performed, with results graphed, and printed out for your record.

We will offer this service Saturday only, on the main floor flea market area.

We have participated in radio testing at three other Ham Fests recently, with many happy and a few unhappy people after receiving the results. A number of dysfunctional radios were identified, others operating at less than specified levels, and a few were identified as operating well above the advertised specs. In all cases where a potential sale was in progress the results assisted the decision, and price setting process.

Pictures of testing at recent Ham Fest at Puyallup, Washington at the following URL.
http://pdxforsale.com/?ad=39535

Hope to see you there!

Thank you.

Hello Doug,
I worked on this receiver a couple of times and made my own
extender card. Find a piece of double sided copper clad fibre
glass board the same thickness as your boards.
Use a steel ruler and a box cutter/stanley knife and make
cut marks into the copper. Peel off the correct strips of copper.
Find a similar socket. Mine was longer than required so I
just glued in a strip of fibre glass PCB material to make
sure no mistakes were made when plugging in the card
to be serviced.
After a bit of practice you soon learn how hard to press on
the stanley knife and how deep to make the cuts.

You can also make a cruder extension card by just finding
an old printed circuit board with similar connector spacing
and cut in to fit the mother board connector.
Cut all the tracks about an inch from the bottom end
of your salvaged board and solder wires from the cut tracks
to a glued on edge connector. Because there will be two
rows of solder tags on the same side, drill a row of zig zagged
holes just under the glued on edge connector so that the wires
on the back side can come through and be soldered to the
edge connector.

Warning. (to keep my conscience clear)
Watch how you use the knife.
Cut away from your fingers not towards them.

Regards,
John Crighton
Sydney

Hi, Theo

The G2DAF Mark 2 receiver appears in Volume 1 of the RSGB
Radio Communication Handbook, fifth edition, 1976.

The original G2DAF receiver appeared in the RSGB Amateur Radio Handbook,
third edition, 1961.

Construction and alignment hints for a G2DAF-type receiver
are in the "RSGB Bulletin" Feb, March, Apr, June, Aug and Nov 1967.

Source record: 23207

Hey - does anyone have a quick scan of the schematic to one of these things? I just wanna look at mine and see where it died to see if it's fixable before I get a whole manual. Were there any common blowup points on them (It was running, then suddenly, the output just went away. I haven't looked at voltages because I'm not sure what to look for without a print, it's a bit complex in there :(? How good are/were these units anyway? I've found it to be quite useable once it's warmed up a few hours, at least it's rather stable on my HP counter.

Thanks! :)

(Oh yeah, I don't know if this really qualifies as a boatanchor, but it sure is heavy...)

Don't have any, but check real TV/electronic parts stores. They're
still somewhat common. Mine are all stuck in old TV sets right now :)

3448. Parting Out HRO-60

Hi, I'm about to part out a HRO-60. The following parts are NOT avaliable: Power Transformer, S-Meter, and the small knob set. All other parts are avaliable, including the PW main tuning knob. The chassis has no corrosion and is in great shape, actually if a transformer and tubes were installed it would work. The case is also avaliable, but it's in terrible shape. If you need parts, send me an e-mail and make an offer. w6jcw@arrl.net

3449. Voltage Measurement procedures Help needed

Due to a death in the family of the Engineer that was providing the test equipment, and RF expertise, we wont be able to offer radio testing this year at SeaPac. Baring some equally untimely event we will be there next year.

We also plan on providing testing service at many of the other major Ham Fests in the area through out the year.

Thank you.

Depends. If there is any resistance between the power supply and the tube element(s) and the element draws current then the reading(s) will be in error. For example a control grid in a class A stage will not draw current and the voltage reading will be accurate. A screen grid may or may not draw appreciable current thus the reading might be in error.
|

Some voltages will be absent or greatly changed with the tube out-of-socket. To measure tube voltages from above the chassis with the tube in place use tube socket test adaptors. I haven't seen any of these for sale at a supplier or in a catalog in years, but they show up on eBay and at antique radio meets and hamfests. Most of mine are Pomona which I bought new many years ago. I like the Pomona adaptors because you can easily connect mini-clips to their terminals.

No. Not at all. You can buy tube extenders that will allow you to measure
this stuff from the top of the chassis, though.

>2. I have no VTVM. Can a modern Fluke voltmeter be used ?

Yes, if it has a high enough ohms-per-volt rating.

I'd like to add a caveat. Some older equipment, especially MIL gear may well have been documented using either a 1000 or 20,000 Ohms/volt meter such as the ME-9, PSM-6, et al. The book should say which kind of meter should be used. If a VTVM is specified, of course the Fluke will do very well.

Recently got my Heathkit DX-40 working, and aquired a Johnson
T/R switch to get a 50 station back on the air...Two questions that
I'm hopeful one of the group will be able to help me with...# 1 the
Heath DX-40 has great output, but when loaded, and keyibng on CW, the
plate current always drops about 15 to 20 ma...in other words if you
key it, it will go up to 125 ma, and then drop down to 110 ma or so
almost immeciately, with a corresponding drop in power as indicated
on an external wattmeter....plate voltage on the final DOES NOTdrop as
current does.
#2..The Johnson T/R switch works great, and all voltages are right on
but I don't think I've ever seen a piece of equipment with two tubes
run that HOT...is that normal...Appreciate any ideas and opinions...
Thanks...Bob

Bob,

What's happening to the grid current when the plate current
falls off? You could be losing some of your drive due to a
bad component or weak tube in the driver stage. It's worth
a look anyway.

Regarding the EFJ T/R switch, their manual states that it's
normal for the unit to run hot.

You might want to check the screen dropping resistor for the 6146 -
any discoloration or cracking?
Most likely, the problem will go away with a new final installed.

3466. FS: Free: 70W 6M FM Equip. Estate Sale remnants. Berkeley Calif. Area Pickup only.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-20 00:01:48 UTC
From: Doug Williams <DougWilliams@[nospam]>
Message-ID: <eadc2$40d4d3e8$42a74eab$26173@msgid.meganewsservers.com>
Source record: 23227

Free, for pickup only. This equipment is located in Berkeley California.

FM 2-way radio Base station.

This equipment can be re-tuned into the 6M ham band.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
The transmitter and receiver are on separate panels mounted
on rails in the center of the rack cabinet.

Rack approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear door handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

The other misc. equipment includes:

1. 4 variacs mounted in a ventilated metal box.
They were probably part of some light dimmer.
(dusty / dirty and in unknown electrical condition)

2. some Antenna insulators.
3. several power transformers.
4. some oil filled capacitors. (probably PCB oil).
5. Some selsyn motor transmitters/receivers. I don't remember the
voltage / frequency spec

on these.
6. some small induction motors with fans.
7. some small relays.

Sorry for the vagueness but this equipment is at my fathers house in Berkeley,
and I am in San Jose. We are trying to clear out the house to get ready to sell it.
If no one is interested I will probably remove the tubes and meters, and junk the rest.

Thanks.

Message-ID: <CYIBc.632$OP1.150@newssvr31.news.prodigy.com>
Source record: 23241

One very nice 51J-4 for sale at $500 firm but YOU MUST PICK UP.
I have had it for about 7 years and about 5 years ago, I went through it and replaced weak tubes as needed and did the full alignment according to the book. Included is a nice copy (W7FG?) of the manual and a "Sams" too. The radio receives very nicely and the kc dial is "spot" on from one end to the other! BFO, marker generator, noise clipper all work as they should.
Except for the side panels being painted dark gray at one time, I believe the radio to be stock. Missing is the narrow filter (well actually it failed) and whatever alignment tools were clipped to the lid / inside.
In the narrow filter slot is a simple capacitor and it gives nice wide band "hi-fi" AM reception. Top and bottom panels are included.

Pictures are viewable at: http://www.ameritech.net/users/p15218/index.html

If I am unable to sell this radio in a week or two without having to ship it, then I'll resort to ebay but I am trying to avoid the shipping & ebay hassles by posting here.
The radio is located in the Detroit Mich area. As for the trust factor, check my ebay feedback as user = p15218. Cash and only cash will be acceptable for purchase.
Reason for selling is that we are moving and I just need to downsize.
Bob

Message-ID: <40D7A44F.B194592E@nbnet.nb.ca>
Source record: 23242

Hi Group

Does anyone know where I can find any info on a Marconi MSL-5
receiver ? I have checked with a few manual vendors as well as
did a google search with no luck. It appears to be a dual receiver,
covering 15 kcs to 1500 kcs in 5 bands.

Tube layout is 2 - 6K7 metal tubes, 1 - 38 glass and 1 - 6F7 glass.
There is also a cats whisker detector under the top cover at the front
of the radio. Two headphone jacks on the front panel, one labelled
xtal headset and the other just says headset. There are two main
tuning capacitors and two 5 position band switches. Looks like two
seperate receivers in the one cabinet. One using the tubes and the
other a simple xtal set.

Interesting piece of technology. I suspect mid 1930's

Source record: 23095
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hi all. I'm doing some serious cleaning. Maybe someone in the Seattle/Everett area would like to pick up any/all of the following:

QST. Feb. 1971 through July 1996, missing Feb, Mar, Apr, Sept 1973 and May 1991.

TS-592/UPM-15 pulse generator. Vacuum tube here. About 45Hz to 10kHz PRF, makes double pulsed with adjustable widths, delay, ... This may be valuable more for the power transformer and the 829 output tube. Last I had it on, it actually did work.

Systron-Donner model 108 solid state pusle generator. Has orig. printed manual. Needs some work in the output stage--should be enough info, incl. schematics, in the manual for a good tech to do this. I could, just don't have time I want to spend on it. Rep rate 10pps to 10Mpps internal, or ext trig to 0pps. Can generate a single pulse, or gated from ext input. 50 ohm output: 0.2V to 50V into 50 ohms. That's 50 watts during the pulse.

TS-403B/U RF generator. Klystron-based generator, 1.8GHz to 4.0GHz. This is the same as an HP something or other...I have a photocopy of the HP manual that will go with it, but couldn't lay my hands on it just now. It oscillates, but I'm sure it needs adjustment per the manual of the repeller voltage tracking vs frequency.

Cross my palm with enough greenbacks and I might ship one of these, but it would not be cheap.

Cheers,
Tom

3485. Kenwood ???

From: Bob <nubob5001@yahoo.com>
Message-ID: <LtVBc.15927$XY6.1920525@read2.cgocable.net>
Source record: 23096

Hi

I am looking at a newer rig for both back up rig and or primary rig. I see a lot of Kenwoods TS 430, 440, and a few others. Anyone have any comments on these rigs? I believe the difference between them is that one requires the power supply? Is the 440's power supply within it?
Also are there analog rigs or digital in regards to using the computer interfaced with some of today's ham software?
Also, I have an old Drake TR-7, and although the cinch plugs look similar, what are the chances that the power supply will simply plug and play?
Any comments on these rigs? Worth the 300 or 400 they are going for? Anyone know of a good site that does sell something used, good condition?
Thanks
Bob

> Thanks de K3HVG
>

Antique Electronics lists them for $34.80 each. (ouch)

I found that some new type 6000 tubes will show up as bad
in my TV-7B/U tube tester,
due to oscillating in the tube tester circuit.
The TV-7D/U has more ferrite beads on the tube sockets,
and is supposed to be better in that regard.

I've heard that you can substitute a 6AU5 tube for the type 6000,
after changing heater voltage. The 6AU5 has a bit less
plate dissipation, but is a common and cheap TV tube.

For Sale:

Heath HW-8 QRP transceiver with matching Heath
HWA-7-1 power supply. Covers the CW segments
of the 15, 20, 40, and 80M bands. All in very nice
shape. Rig has a few professionally done mods that
make it a better radio than stock:

Internal speaker and amplifier (operate without headphones)

Wide/Narrow switch has been changed to a continuously
variable pot that controls the width of the pass band

Coaxial PL238 and binding post antenna connectors added

All wiring & all mods were done very neatly and professionally.

$100.00, plus actual shipping charges.

Ah! Memories! When I served on HMCS Sussexvale and HMCS Jonquiere, two WWII Frigates, we had them in the radio shack. Yes, they were excellent VLF and LF receivers. Indeed, they could be tube operated, or without power as a crystal set!

I don't know where you could find any info on them now... but thanks for the memories!

Hi,

I have a CRT and a Transformer for a Oscope. I have to look it up, but I
believe it was a Tek 545. The CRT does have a part number on it.
If you're in need of said items, e-mail for more details. Postal MO only.
The parts were stripped out ONLY because I had no need for the scope and it
was too big to lug around or ship to sell. Shipping will be extra for these
items.

Source record: 23103

Bob,

The TS-430 and TS-440 are different as night and day. I've
owned both and liked them both. Both require a separate p/s.
The 440 usually comes with a built-in antenna tuner which
works well. If I had to choose, I'd spend the extra money
and buy the 440. For another $200 - $250, you would be a
lot better off stepping up to a TS-850SAT.

I wouldn't count on the Drake p/s connector pinout matching
the Kenwood connector. Always check first!

73,
Dean K5DH

QST for November 1972 (I'm pretty sure I got that right). But you won't like it, because it's about pulling the tube, and putting an FET in there.

That was right when the rules changed so the US Novice license no long required crystal control. So someone decided it was a good time to transistorize the old VFO.

Hi Irv

Glad to hear that at least someone has heard of that radio. :-)
I have a few other Marconi sets from that era that I am also
trying to get info on. It's hard to believe that I have so many
radios of WW2 vintage that there is no information on. It's not
like there was only a small number made. Must be the "why" they
were made or the "who" they were made for that causes the trouble.

" Uncle Peter" <radioconnectionNO@cox.netSPAM> wrote:
>Any articles or experience on taming drift in the Heath VF-1 VFO?

I got mine to be pretty stable. First I removed that big heat producing dropping resistor (was it a 10K 5 W? it's been a few years) from under the chassis and away from those heat sensitive frequency determining parts. Then I added a few holes in the upper case to help remove more tube heat. Finally I got a small filament transformer and ran the VFO filaments 24/7 which really helped with warmup drift, which as I recall sometimes went on slowly for up to an hour. The always-on didn't seem to hurt the tube life as I recall, but heck I had a bin full of those 6AU6s anyway so it wasn't a problem... ;)

3498. Free: HP1743A scope "for parts"

The note on the QST article for the FET conversion is a good one to look into. I've done the conversion on several VF-1 VFOs and the result is spectacular. Last one I did cost just under $25 to buy all the parts new. However, I do away with the authors scheme for dropping the supply voltage, from the transmitter, and added an internal 20 V DC supply to run the thing. Works great and you can then use it with any rig you desire.

>2. I have no VTVM. Can a modern Fluke voltmeter be used ?

>Thanks

>James

Tubes must be in for the correct voltages. Yes you can use the modern
meters for DC, but if you're measuring a radio the RF could cause
bogus readings and present a hazard. Do not rely on any digital meter
to give correct answers in a powered-on tube based boat anchor. You
can get nice meters (20kOhms/volt) for $10 from C&H or FairRadio. It
will be a lot safer.

Use the Fluke meter for static measurements and precision measurements.

Watch for tube test sockets at ham fairs. Or make your own. These
have pins that allow you to measure voltages with the tube plugged
in.

The power supply for that puppy is an interesting study in Newtonian Physics
:

An object at rest will stay at rest unless acted upon by an outside force;
an object in motion will stay in motion unless acted upon by an outside
force.

My 2000 power supply tends to stay put in the shack, and things move around
it. Having that beastie in motion is a fearful thought..... I have
noticed that the power supply gets heavier with time too.....

I wish you success in selling it Ted !!

Hi all,

More free stuff. Pick up in the Seattle/Everett area, or pay for
packing and shipping:

RCA CT2015 "TACTEC Power Booster" -- 13VDC amplifier for FM service.
Data probably available somewhere, but not too hard to figure out.
UHF connectors in and out.

LM-13 hetrodyne frequency meter; Navy's version of the BC-221. Has
120VAC power supply attached, and has the original calibration manual.
Covers 125kHz to 20MHz (probably useable to 32 or 40MHz; it's
harmonics of the 2-4MHz VFO range.)

Cheers,
Tom

Hi again...

More freebies: about 200 pounds of assorted transformers, more than 25 pieces. These are mostly power transformers, of the sort used in solid-state electronic instruments around twenty years ago before switchers became common. V-A ratings I'd guess range from perhaps 10 or 20 up to at least a couple hundred, most in the 100VA range. There are a few power chokes too, but probably more than 90% transformers. Probably only makes sense to pick these up from me...Seattle/Everett area. I suppose they could be shipped motor freight if someone really wants.

Cheers,
Tom

Bugger. Sounds ideal for my harmonic generation experiments. Pity
you're in the States. I guess the shipping would be a bit steep.
Whatever you do, though, Tom; don't throw it away! I rescue old scopes
on this side of the pond and might swallow the shipping fee rather
than see it end up in a dumpster (always a tragedy). How much does it
weigh?

Scope is spoken for by someone nearby who has a working one. That's
an appropriate use of this scope since the tube is fairly expensive.

Cheers,
Tom

who will undoubtedly have some more goodies for free soon. Stay
tuned.

Fair enough, Tom. You've done me a favor, really. I can't justify any
more clutter and am actually striving (not very convincingly) to clear
some much-needed space!

To All,
I just purchased a Lafayette kt-200 and research on the net says it has a jack for a Q multiplier. Further research on a Q multiplier shows that is some how acts like crystal filter, only variable and it appears that it can also boost poor signals??? Can someone give me a readers digest, not overly technical explanation of "how do it work" ????? and how well does it work????

In addition any suggestions as to which model, of the many that heathkit sold, would be, arguably, the best for this application.....

The Military Radio Collectors Association will hold it's fourth annual meet on September 17 and 18, 2004 at the West End Fairgrounds in Gilbert, Pennsylvania. Activities will include a swap meet, field radio exercises, equipment displays and formal presentations.

This event is held in conjunction with the Red Ball Military Transport Annual Vehicle Rally. So, we get to double dip: Green radios and green trucks. Complete details are available at:
http://www.milradio.org/

The MRCA is a loosely structured organization whose sole purpose is setting up the meet. If you'd care to join in, subscribe to our email reflector to monitor the preparations, make suggestions, and perhaps volunteer.
http://mailman.qth.net/mailman/listinfo/mrca

Feel free to address more private comments or questions directly to me.

Best regards,
Al

3527. Mic hookup for Hallicrafters! SR-500

Newsgroup: rec.radio.amateur.boatanchors

Source record: 23138

Hi All,

I have a Hallicrafters SR-500, which I've never used for anything besides listening since I don't yet have my General class license. I'm getting ready to start working on my General, so I'm looking for a suitable mic for this rig (don't have one at all) and I'm not sure how to hook it up once I get it. Does anyone have a recommendation for a mic? Also, how do I go about hooking up the mic to the rig? Most of the older mics I've seen have four wires, but the mic connection on my radio accepts a plug with only two prongs.

Any advice would be appreciated!

Thanks,
Rodney, KF4COV

Bob,
A "Q multiplier" is just what the name says. It is a tuned circuit (either a narrow bandpass filter or a narrow band notch filter) which incorporates a means of "multiplying" the filter Q.

"Q" of a tuned circuit is defined as 2*pi*the ratio of energy stored to energy dissipated per cycle in the tuned circuit (or inductor or capacitor...), which for the usual parallel tuned circuit is essentially equivalent to the ratio of the circuit inductive reactance to the resistance of the inductor.

The Q increase is achieved by hooking up an amplifier to provide positive signal feedback, from the filter's output back to it's input. The amplitude of the positive feedback is set just high enough to cancel most of the losses in the filter, but not high enough to make the circuit oscillate.

By canceling the losses in the filter, the effective Q of the passive filter is increased, and therefore the bandwidth is decreased, giving a very sharp frequency response.

This doesn't come for free, however. Since there is an active amplifier involved, there will be some noise output from the filter along with the desired signal.

I scanned this, not from the Reader's Digest, but from the 1964 ARRL
handbook:

The "Q Multiplier" is a stable regenerative stage that is connected in
parallel with one of the i.f. stages of a receiver. In one condition it
narrows the bandwidth and in the other condition it produces a sharp "null"
or rejection notch. A "tuning" adjustment controls the frequency of the peak
or null, moving it across the normal pass band of the receiver i.f.
amplifier.

The shape of the peak or null is always that of as single tuned circuit
(Fig. 2-50) but the effective Q is adjustable over a wide range. A Q
Multiplier is most effective at an i.f. of 500 kc. or less; at higher
frequencies the rejection notch becomes wide enough (measured in cycles per
second) to reject a major portion of a phone signal. Within its useful
range, however, the Q Multiplier will reject an interfering carrier without
degrading the quality of the desired signal.

In the "peak" condition the Q Multiplier can be made to oscillate by
advancing the "peak" (regeneration) control far enough, and in this
condition it can be made to serve as a beat frequency oscillator. However,
it cannot be made to serve as a selective element and as a b.f.o. at the
same time.

> and how well does it
> work????

They work well, within their limitations. The peak bandwidth can be very
sharp, but off the peak the curve slopes down more gently and doesn't
provide a dramatic difference in adjacent channel rejection. The sharp
bandwidth of the peak makes the adjustment very sensitive to drift.

Q multipliers don't produce a null and peak as a single crystal filter does.

>
> In addition any suggestions as to which model, of the many that heathkit

> sold, would be, arguably, the best for this application.....

If you can get some B+ and heater power from the receiver, the Heathkit
QF-1 works well. There are other models with internal power supplies.

These things are sensitive to power supply hum. It may help to decouple the
Q multiplier power through a series resistor and another electrolytic cap.

The OP may care to look up the 'Select-o-Ject' which was a modified
'Q-Multiplier' which could produce a notch.

I thought the "Select-o-ject" was an audio filter. From Villard, if I'm
remembering properly.

I can't say I've ever seen any attribution for the origins of the
Q-multiplier. Obviously, it's a step away from the regenerative receiver,
but I've never seen anything about who first connected it to the plate of
the mixer in a receiver for this purpose.

Steve:
As far as I am able to determine, your BC-224-G (and for that matter, the other fellows BC-224-H) does not stand out as anything particularly special. You should take a look at the following site (http://hereford.ampr.org/history/bc-348.html#_Toc438558117) for rather detailed information regarding the 224 and 348 variants. I would guess that the fellow who bid $1,475 will probably not follow through with payment. These things are still very common, and although a very good one might fetch several hundred dollars on e-bay (where they are always over bid), they are probably not worth more than about $100-$150 in good (working) condition. I suppose a "serious" collector might have a reason to want an H model - but I'm at a loss as to why any knowledgeable person would bid that much.

Hello,

Just got done slaving over a TS-440S that has the well known VCO problem and can see it will take 10 hours or so to clean the VCO board using the technique that I am using. I read the tech service bulletin and it says it should take an hour, so I must be doing something "wrong".

I am using a tool that a dentist uses to clean teeth which is pointed and curved so you can get into tight places. Is this the best tool? If not what is?

Also, are there areas that one can do a sloppy job of removing the potting compound and are there areas that you should REALLY focus on to make sure it is clean??

Is it necessary to replace any components or can one "clean" the VCO PCB and re-align?

Any and all help and tips appreciated.

Thanks

Jim

Yo hams!

Would anyone volunteer what happened to the San Jose company during
these pre-field day hours?

Looks like several model 312s have gone thru here over the years. That
being a xtal-controlled commercial (read marine?) SSB xcvr.

But I've a pre-set selected remote antenna matcher called the SBA-365...
that might be an accessory for the 312.

Does anyone in the wild blue have SBA manuals?

Tnx & happy FD fm 3A-bat. W4RRW

I Think the original service bulletin called for removing the original
compound,changing the transistor, varactor diode and then re-potting
with hot glue..then tune the circuit as outlined in alignment section
of ser.man. GL w4pqw

I think it was much quicker and dirtier. Based upon the premise that technican's time was the most expensive item and that spare parts were in stock, the idea was to remove all of the parts with an desoldering station, pull them out as best they could with no concern for damaging them and putting in new ones.

Dump a glob of hot glue in, wait for it to cool and retune the PLL. This could be done in about an hour.

Having done the eqivalent mod on an R5000, I can say the other method, carefully removing the glue while trying not to damage anything, takes a lot more time and patience. It took me 4-5 hours with a tweezer and magnifying glass and I only crunched one disk capacitor.

Bob

A Heathkit QF-1 Q-Multiplier should serve well, since the KT-200 (HE-10
factory wired version) both are designed for 455 kHz IFs.

Good luck! That was my first ham receiver.

I've always thought that sellers should know what they want for an item.
The "make me an offer" bit has always been offensive to me.
In most cases the seller is trying to play on a buyer's ignorance.
Neither do I expect a potential buyer to play upon a seller's ignorance....
It reminds me of used car salesmen saying "what do you want to pay?"

Whenever I've been asked that question, I answer, "Why, zero, of course!"
Then we can begin negotiating....

This kind of thing has happened in the past.
There is a name for it in psychology, but I don't remember it.
It's the same sort of group-think and greed
that lead to Gold Rush and the Dot-Com-Bust:

A few "experts" put forth an idea (the "McGuffin") that sounds like
a sure money-maker. People start whispering to their buddies,
each one trying to sound like he's just a little bit smarter
and more informed about the McGuffin than the other guy.
Before long, there is a general, though specious, knowledge about
the wonders and glories of the McGuffin and the money to be made
if one gets in on it.

Next comes our old friend, Professor Harold Hill from "The Music Man-"
in fact, a whole bunch of him. They smell a mob with money ready
to throw it at anyone who can give them a piece of the McGuffin.
Professor Hill swoops in, smiles, makes grand promises and then
treks to that great house of prostitution on the hill, Congress.
After purchasing the requisite number of congressmen, senators
and committee men, congress hands them "The Golden Condom,"
with which he/they proceed to "do business" with the mob (investors).

Pronouncements are made, great trumpets are blown, artisans hired
and systems installed. The mob gathers round the grand banquet
table, festooned with gorgeous press releases, colorful brochures
and served by handsome young MBAs in expensive suites.
Slavering in anticipation of gorging themselves on the
sweets and cakes, and on the roast suckling pig that
will be the centerpiece of their repast, the mob watches
as four tall MBAs bring forth a massive serving tray,
it's cover of burnished brass engraved with a likeness
of Reedy Kilowatt using a computer.
They place the tray in the center of the table.
The mob leans forward, eyes wide and glistening,

forks and knives in hand.
Trumpets blow a glorious fanfare.
The MBAs, in one smooth move, lift the lid to reveal...

...a turkey.
A rather small turkey.
A rather small, very over-done turkey.
A hush falls over the assembled company for about five seconds,
wherein we will wisely make our escape.
And as we hear the sudden tidal wave of pandemonium
break behind us, as some of the "investors" dive for
a tiny morsel of the turkey, others start forking
their tablemates and still others turn their knives on
the hapless MBA servers, we see Professor Hill,
bags bulging with money, his convertable freshly
slicked with wax, cruising off into the sunset.
If we listen closely,
we can hear him singing to a familiar tune:

"Seventy Six bone heads paid for my parade,
with a hundred and ten poor fools right behind...."

Hammarlund HQ-180A NICE!!!!!
Also comes with the matching Hammarlund speaker.
Looks wonderful. Came from the original
owner,non smoker.
Oh, and the clock works GREAT also.
I've been listening to am radio on it and has a great sound. Letters
around knobs are not worn at all.
All the Knobs turn smooth, Bright bulbs on front. What more can I say.
Price: 500.00 for all. To see picture go to: QTH.com And
go to HF rigs

Hi all...

Continuing my downsizing. Free for pickup in the Seattle/Everett area: my homebrew doppler scanning DF antenna system, including the antenna structure, control box with compass rose LED readout, and cables. Worked well the last time I used it a few years ago. I believe the article describing this system was in May 1978 QST.

Cheers,
Tom

3568. Free: piece of history? KIM-1

Newsgroup: rec.radio.amateur.boatanchors

Hi all. Continuing to downsize...

Piece of history, or trash? I have a system built around a Commodore KIM-1, one of the original single-board computers I guess. It includes the Kim, a power supply, about 24kbytes of additional static ram, and boards for additional parallel ports. With the original KIM-1 manual set and other KIM-1 related documents and lots of KIM-format cassette tapes with sundry software. (Includes a FOCAL interpreter, for example!) Free if anyone wants it...you pick up in the Seattle/Everett area, or pay shipping--probably over 100 pounds all together. Complete as far as I know, but obviously "as is," and hasn't been turned on in years.

Cheers,
Tom

(snip)
I remember the ads for these in PW etc. I wondering what they were. I
assume
some sort of shortened helical dipole with an ATU.

Do you know?

Yes, in fact it was a 6 ft pole with lumped inductance forming the end
loading for the so-called "feeder" , which in reality was a single 30ft
length of insulated wire, end fed from the transmitter via the Joymatch ATU
and tuned against earth.
I understand that due to the highest current portion of the wave being along
this "feeder", with highest voltage being in the lumped inductance, most of
the useful part of the signal was radiated by the "feeder" rather than the
antenna itself!
Nevertheless, the Joystick had its converts in those amateurs who found it
allowed them to operate from locations where normal sized antennas were
frowned upon or lack of space made it impossible to erect.
Whether they ever compared it to an end-fed random length of wire, I am not
sure.

I got a JoyStick (the pole) and a JoyMatch (the ATU) in 1965 or 1966.
The combination wasn't very effective and performed more poorly than an
end-fed random wire to which I did compare it.

However, my JoyMatch, which I still have, doesn't look anything like
the one on Ebay. Mine is a simple L network tuner, nicely made of a
tapped coil on PVC and a 365pf capacitor in an open configuration
without cabinet. A label on the coil says JoyMatch. I still use it
with an ICOM IC-PCR10000.

Hi Tom,

You are correct about the QST reference. The article is entitled "A DoppleScAnt" by Terrence Rogers, WA4BVY.

The article is very positive about the method.

Your generosity should be much appreciated by someone.

73, Roger, W7WKB

I'm looking for a vintage tube type amp for 6 meters.
Maybe a Afterburner or something similar.
Needs to take a fairly low drive input power,
10 watts or less.
I plan to use it with my Hallicrafters SR-46 6 meter
AM rig and my HeathKit Sixer LunchBox.

Anybody got anything that will work that they'd
like to get rid of?

Fair Radio always has goofy Army amps for VHF-LO field radio systems,
which will almost all cover 6M (and some of which will cover 10M). Nobody
seems to want them, especially the airborne ones with 400 Hz transformers
which will work nicely on the ground with an outboard power supply.

Note that not all of them are linear... some of them are fine for FM
with a tuned output stage but are going to be no use at all on AM.
I suppose they could be rebiased at the expense of output level, but
then you're talking turning it into a very different amp.

I wonder just how many different versions there are? Mine (Joymatch
IIIb) is in a very solid Hammerite-finished case with coloured plastic
covers front and rear. It's just an ordinary L-match inside - although
reasonably well-made. Oddly enough there's no provision for a
ground/earth connection at all on the tuner itself: that must have
caused a few surprises to unwary users in the past :-)

3592. Re: Heath VF-! VFO stabilizing

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-06-29 04:15:31 UTC
From: Chris Bowne <radiobwn@riconnect.com>
Message-ID: <10e1r758s4fsf1a@corp.supernews.com>
Source record: 23053

The one I currently have was very unstable until I found and corrected the problem - the low frequency (1750-2000 kc) coil for the tank circuit had several loose turns on the grid end, where the coil dope had dried out. Tightening up the wrap of the coil and sealing the turns with some epoxy has resulted in a very stable oscillator. Its still kind of sensitive to mechanical shock, so don't bang on it, but once it's set, it stays!

I just picked up a nice old 535A with four plug ins, one of which is the 1L-20 10Mhz - 4 Ghz Spectrum Analyzer.

Can anyone point me to a tech manual for the 1L-20? It seems to be working, but I cannot generate any "picket fence" frequecy markers on the display.

Hi All:
I have a HICKOK 539B TUBE TESTER. It working in excellent condition.
Few days ago , I just change the 83 rectifier tube. Then i test the
power tubes or preamplifier tubes. The GM read value over the micromho
metter. I change the original 83 tubes. The same effect.
Anybody can give me any better solutions for the problem I would be
thankful. Please e-mail

From: rrkrr <robert.kerr@gtri.gatech.edu>
Message-ID: <cbs0ah$l6l$1@news-int2.gatech.edu>
Source record: 23056

I have an interesting old National receiver with no documentation, labeled model number NC-127D. It appear very similar to the NC-101XA, but it's painted battleship gray and has a rack mount front panel with handles. There are more control knobs on the front panel than the -101XA, and the S-meter is located at the upper left corner of the front panel, rather than behind the near left side of the tuning dial escutcheon as in the -101XA. It tunes from 540 kHz to 30 MHz. The knobs are an off white color.

A tag on the front says "Order number 2507" and gives a manufacturing date of 6-1-45. I have it from the former owner that the "D" stands for diversity, and that it was designed to be part of a diversity reception system employing at least one other receiver like it. There is a coax connection on the back for import/export of the local oscillator signal, but unfortunately I have only one radio.

Does anyone out there know anything about this radio?

Bob

This site appears to have a service manual for the 1L20 -- I _think_.

http://www.baylornet.com/research/Tektronix.Tek.1121.Amplifier.Service/item10/40123.html

The part of the web page that has the 1L20 entry in it is a bit less
than completely comprehensible.

Also

http://orbita.starmedia.com/~manuais/T.htm
and
http://www.testequipmentcanada.com/t.html

I'm about to order a manual for _my_ 1L20, which plugs into a 547.

You're in a boatanchors newsgroup, and you've never heard of Clegg?
They were a big name in VHF equipment forty years ago, alongside
Gonset that made the various Communcators. Clegg was better grade
VHF equipment, albeit not moonbounce level, when most commercial
VHF ham equipment was for local useage.

I had to look up the Zeus (and I'm lazy so it's a websearch rather
than checking old magazines) and it's a transmitter. Covers both
six and two meters. About a hundred watts output. AM and CW.

It, like many of the other Cleggs, were something you dreamed of
having.

saw the question on the Clegg Zeus.

I wonder still about the great die-off in the 1970's.

In the mid-60's when "incentive licensing" came about, Wayne Green wrote editorials predicting the failure of incentive licensing as well as the demise of amateur radio manufacturers and the eclipse of the American electronics industry.

In retrospect, it seems to have happened, although there are numerous other forces involved. Computers, the Internet, cell fones, cable TeeVee, birth control, and of course, inflation.

Hallicrafters, Collins, Eldico, Clegg, Drake, Hammarlund, National, Mosley, Telrex, Eico, Tri-ex, Hygain, Johnson, Heath, Knight, Layfayette, Gonset, Signal/One, Globe, Henry Radio, add in the distribution channels, the local stocking parts houses, the parts manufacturers, the band activity, and it sure seems that Wayne called it.

Before everyone heads for the big QSO party in the sky, how about adding your I-was-there observations and recollections.

One thing I wonder was what happened when Heathkit unraveled? what happened to the thousands of spare parts. Knowing how procurement and inventory control works, I'm certain that they had hundreds of SB, round and green, cabinets and thousands of green and black knobs at the end.

Where did those parts go? I've seen rumors that someone or some corporation bought up the parts inventory or that a rich ham has a warehouse with several hundred unbuilt kits.

Did they take a tractor trailer to Dayton and liquidate the parts? Was there ever a year that someone showed up with 40 SX-117's and sold them for half price?

I have 70% of the parts for the Mosley CM-1 receiver. When Mosley dropped the product line, they sold the inventory and a store in St. Louis sold CM-1 parts kits, not all the parts but many of them.

That's what happened to the Mosley CM-1, this was in 1965.

That's what I'd expect happened to the other vendors unless they continue today.

Collins folded in to Rockwell. MFJ got the the HyGain product line. Signal/One devolved into a criminal operation.

Comments?

Yeah, in retrospect, Wayne did a good job predicting the future.
If I remember correctly, Wayne made LOTS of predictions....

About the demise of Heathkit, and the inventory. Much of the old
stock was sold off at Dayton one year. I was there, but I don't remember
the year. There were a LOT of NIB kits, some missing parts selling
really cheap.

Dale,

How about if we assume that I am not a troll!

Goggle definition of troll:

"An outrageous message posted to a newsgroup or mailing list or message board to bait people to answer. Trolling is a form of harassment that can take over a discussion. Well meaning defenders can create chaos by responding to trolls. The best response is to ignore it. Also, the person who posts such messages."

Was I outrageous?

Sorry if my small post was a problem to everyone. I am just looking for a particular vintage VHF transmitter. I had one as a kid and I wish that I still had it. What better place to make a simple inquiry? You never know untill you ask.

73,

I suspect that the individual franchised Heathkit stores went to the
local hamfests and sold off the leftover inventory. At least that is
what happened in Maryland. First the local store offered reductions
on the kits in stock, and all of the demonstrator models that were
in the store, then after all the good stuff (read ham stuff) was gone,
they started showing up at the local hamfests with trailer loads of
heath trash. Weather stations, wiper delays, accessories, ...

All because Schlumberger had to get rid of the kit and computer division
to avoid an antitrust problem when they bought Fairchild.

You misread his post. He was replying to the post by someone else asking
what a Zeus is. He took that poster for a troll.

That other post did show a certain ignorance, certainly suggesting he doesn't
know what this newsgroup is about.

On the other hand, when people treat this as a buy and sell newsgroup, rather
than a newsgroup to discuss these old rigs, it does nothing to eductate such
people about the old rigs. The stuff I deleted from your post, about how
you had a Zeus as a kid is intriguing, because while I came along about
a decade or so after it was produced, it always struck me as something the
average kid would only lust after, rather than own.

My apologies to Dale, I misunderstood!

Nice to hear about the Ameco rig. I have one here, a TX-62 with 621 VFO, that I plan to get on 50.4 soon. It would be nice to see a lot of the vintage VHF stuff on the air,

That sounds a bit garbled.

Wasn't Schlumberger out of the picture a lot earlier? Wasn't it Zenith
that bought Heath, in the late seventies or early eighties, leading to a
period when pre-assembled Heath computers were sold as Zenith's?

Heath "died" about a decade ago. That's relatively recent. Even then, it
continued/continues, though on a much smaller scale and not as a kit
manufacturer. They continued with the educational kits, or something like
that. And I thought they carried some inventory, at least for a few
years. Even a few years back, people were pointing people to Heath as
a source of spare parts in various newsgroups, I'm sure including this one.

And I think it was other issues that got Heath out of the kit business. there was a period when they were selling to a wide range of the public. I remember a John T. Frye article in Popular Electronics thirty years ago where he wrote about the process of turning an item into a Heathkit, and they used novices to test build using the instructions, to ensure that anybody could build the kit. So the market was not just those interested in electronics, but anyone who felt up to assemblying the kit, and wanted to save some money.

With time, the kits got too complicated, because the level of electronics had risen. And the savings to the builder were little or none. Solid state brough a high level of mechanization in assemblying, something that was not the case with tube equipment. One could probably cut some money off a product if the end user put it together, even given the extra cost of making it a kit. But that changed as the equipment became more complicated, so you were either paying the same price for the kit as an equivalent assembled unit, or even paying premium. That surely reduced the average public's interest in such things, and it was that wider swatch of the public that made the company profitable. When only hard core hobbyists were interested in the kits, they could not sustain the company.

And that surely is why it got out of the kit business.

Yes, there have risen various companies since then who put out kits. But they are much smaller companies, deal with a specific market, and likely deal with builders who expect less of a level of handholding.

Be carelul thinking this is the sign of the demise of BPL. While it
certainly sounds toward the good side, read the release carefully. They are
very careful and they may just be saying what they think you want to hear.
They pointed to the uncertainty of the laws as a contributor to the dislike
for the technology. This could turn this around if lawmakers like BPL.

Yup...I enjoy VHF boatanchors! The old Gonset IV has surprised a few folks on 50.400.....the audio is quite nice; much "richer" than the other SS rigs I've used (DX70TH & FT857) on AM. I was hoping for some AM contacts during FD, but heard no one during the short time I was able to operate, and no replies to my CQs.

Back on topic....the Ameco uses several dual capacitors in the PS section....I was going to try to hollow out the caps and restuff them, but the new caps are too big.....anyone still make 400 mike 450 V dual caps? Didn't see any in my (brief) search thru Moser and my old Newark catalog. 'Course, the Ameco is NOT a Collins or Hammerlund....probably no harm in just swapping them out for two new caps.....

Cheers!

It isn't, though.

>
> Wasn't Schlumberger out of the picture a lot earlier? Wasn't it Zenith
> that bought Heath, in the late seventies or early eighties, leading to a
> period when pre-assembled Heath computers were sold as Zenith's?

Schlumberger was/is a conglomerate corporation that is composed of
a bunch of dissimilar companies that they bought up and held... much
like what IBM, GE and Honeywell do. Schlumberger wanted to get into
the semiconducter manufacturing business, so they were looking for
a manufacturing plant to buy... Fairchild was up for sale.

The FTC strongly suggested to Schlumberger that if they bought
Fairchild they MIGHT be taken to court for antitrust violations.
The reason for this is Heath was one of Fairchild's major customers.
The FTC of that time didn't like anything that was vertical in that
way.

So, Schlumberger went looking for a buyer for Heath/Zenith, and that
buyer was a French company called Group Bull. Group Bull wanted to
enter the personal computer market in the worst way, so when they saw
that Heath/Zenith, a semi major player in the personal computer and
data entry terminal business was up for sale, they jumped. Bull never
had any interest in the Heath side of the business, so at the first
possible opportunity, they pulled the plug. Heath was set off on their
own. With no money, no manufacturing capability, and did I mention
no money?

What you say about the decline of the kit business is mostly true, but
I firmly believe that if FTC hadn't put their nose into the business,
and caused Group Bull to buy Heath/Zenith, there would still be a kit
company.

-Chuck Harris

All reasonable points but I'm interested in what people observed happening, not their interpretation of why it happened. You make good points and are welcome to expand on them but I wonder how the die-off appeared to folk who saw it happening.

The report on the Maryland Heath store (Rockville, I've shopped there and at the Alexandria store) dragging the audio and other junk to local Hamfests is interesting.

By the way, the old Heath Tube-Audio junque commands a premium from the audio-nuts. I don't know why. It's not like -cough-cough- tube SSB transceivers.

A word about tube audio vice tube (boatanchor) radio. The audio nuts say that tube audio is superior, produces better sound.

Generally tube SSB/CW types don't claim that. I have tube radios because they are inexpensive and I can fix them. Solid state radios could be just as maintainable but the manufacturers make the parts too small for me to work on. My SB-104A and SB-303 are really tube style radios (except for the 104A's digital readout), mostly big, cheap common parts.

It wasn't just the economics of kits, the Hallicrafters, National, etc were done in by something else.

In the 1960's, during the ramp up to Incentive Licensing, Wayne Green was blustering and pounding the table about how Japan, which was toying with both no-code and a low-barrier licenses, would produce millions of engineers and technicians, Their skills would design and build products that would dominate ham radio and eventually electronics.

While other factors contributed to the die-off, there is no question that Wayne called it exactly right. Remember in the 1960's, there was essentially no Japanese amateur radio gear imported, except for that mechanical key and maybe code practice oscillators..

It probably wasn't until the early 1970's that Yaesu and Kenwood showed up. Now ICOM, Japan Radio, and others have the lions share of the market.

What happened to Hammarlund? EF Johnson? Were there fire sales every year at Dayton? What happened to the last run of HQ-215's or the last batch of NC-270's. Did National ever make a solid state radio, other than the HRO-500?

When they turned the lights out at Hallicrafters, were there a batch of SR-500's in a warehouse that took that last ride to Dayton?

Did people see bins of bare chassis or front panels at the tailgate sales? Incomplete NCL-2000's?

I'm guessing that the die-off happened about 1970, give or take a few years. I didn't go to Dayton until around 1980 so I missed it.

I also stopped reading the ham magazines between 1966 and almost 1980.

By the by, I'm here because I have started collecting and restoring boat anchors. I believe these are valuable collectables and that in 5, perhaps 10 years, these old radios will be incredibly expensive. Currently the prices are rediculously low but that is about to change.

Current prices are low because as hams age and go to the QSO party in the sky, their prized radios are being dumped on the market, primarily eBay.

If BPL doesn't kill HF and I don't think it will, not because we will defeat it but because cable, DSL, fibre to the home, sat, and Gen-3.5 cell fones will crush the interest in BPL, the proposed no-code Generals and the almost no-exam entry HF licensees will double and triple the interest in Ham Radio.

When that happens, everything Ham Radio, especially the historic radios that have "class" will soar in value.

Even if that isn't a factor, the weird, useless stuff that people collect, pottery, knick-knacks, wood furniture, carvings, Hummels, and so on, if an HT-32B appreciates as much as that stuff, it would be worth tens of thousands of dollars.

Maybe that won't happen but when I can buy a 1960's tube radio for a couple hundred dollars, it seems like a bargain. Especially when that radio originally cost two or three times that much.

whatever. Tell me your stories from the die-off.

FCC Turning Blind Eye in BPL Proceeding, ARRL Charges

NEWINGTON, CT, Jun 24, 2004--The ARRL says the FCC apparently has already made up its mind about broadband over power line (BPL) and "wants no bad news" about the technology. In reply comments filed June 22 on the FCC's Notice of Proposed Rule Making in ET Docket 03-47, the League called on the Commission to take "a fresh look" at BPL before enabling its deployment. Again asking the FCC to put the proceeding on hold for a year, the League recommended that the Commission in the meantime require BPL providers to conduct FCC-monitored interference testing with all stakeholders. The ARRL charged that while an overwhelming majority of comments oppose BPL due to interference concerns, the FCC continues to rely on what the League called "vacuous assurances that BPL would not cause harmful interference." Test data and a growing record of unresolved complaints indicate otherwise, the ARRL said.

"ARRL is of the view that this proceeding has been prejudged and will, in the end, be decided not on the technical issues that should control the outcome of this proceeding, but on the politics of the matter," the League commented. "Given the evidence on the Commission's table, it cannot now authorize BPL at the radiated emission levels proposed, and without substantial restrictions."

Among those restrictions, the League recommended keeping BPL altogether away from all Amateur Radio allocations, should the FCC decide to authorize BPL under its proposed rules. As an alternative, the FCC should guarantee that an interfering BPL system can be shut down immediately in the face of a valid complaint, "not after a BPL provider has taken months to discover that the interference cannot be resolved."

Where There's Smoke . . .

To date, the ARRL contended, the FCC has seemingly ignored the League's BPL technical studies as well as the National Telecommunications and Information Administration (NTIA) Phase 1 BPL study that clearly demonstrate BPL's interference potential. Five additional technical evaluations accompanied the ARRL's reply comments.

"The Commission is obligated by the Administrative Procedure Act to look for fire where it is shown a good deal of smoke," the League said. "Here there is far more than smoke in the record." Any decision in the BPL proceeding "must be supported by substantial evidence," the ARRL asserted.

Here's what I saw:

Byt the mid-1960s there was a wide selection of US-made ham gear, new, kit and used. Surplus was still all over the place and dirt cheap. If you knew where to look for parts, homebrewing could be done easily.

Heath stuff was OK but not in the same league as Drake or Collins. Drake was the poor man's Collins, Heath was the poor man's Drake. Swan was in there someplace but opinions varied widely on it, and no serious contester or DXer used Swan stuff. Hammarlund, Hallicrafters and National were still in business but not nearly so popular as Collins/Drake/Heath/Swan

There were a few Japanese imported rigs, but they were generally considered to be inferior. Some were disguised - most Lafayeete stuff was "imported", and the popular Henry 'Tempo One' was actually a rebadged Yaesu FT-200.

All this may seem like BA nirvana but there was one big problem: Very few rigs did everything well.

What I mean is that most rigs lacked basic features that we take for granted today. Consider the SB-100 - nice SSB rig, 100W, 80-10. Pretty good on SSB. But it had no provision for a sharp CW filter, no RIT, and no AGC off/slow/fast choice. No processor or noise blanker, either. The later SB-101 and -102 added the sharp filter option but kept the other problems.

Now if you spent the money for an SB-300/400 pair, you could have a sharp CW filter and AGC selection, plus independent control of transmit and receive freq. But no transceive-with-RIT, no processor,

no noise blanker, and you had two boxes and their interconnecting cables.

Similar problems dogged almost all other makes and models. There was always something left out that could have been easily incorporated, but wasn't in the designer's vision.

Most of the ham gear outfits were not as big as we hams like to think. In the case of Collins, ham gear was a sideline that existed in large part because Art Collins wanted it that way. Heath sold far more non-ham kits - we were just one division.

Most of the big names were still being run by their founders. These folks were getting on in years by the 1960s.

Then in the '70s 'serious' Japanese ham gear began to appear. Yaesu's FT-101 and the Kenwood TS-520 families showed up with lots of desired features all in one box, at a reasonable price. They were almost all solidstate, too.

What American-made setup of the time could compete with a TS-520S? It was a 100W transceiver that covered 160-10 plus WWV. Optional CW filter, DC supply and external VFO. AGC switch, processor, fan for the finals, RIT, etc., etc. All in one receiver-sized box.

Heath and Drake at least tried to compete. But the Japanese had the advantage of a head start, plus a favorable exchange rate and cheaper labor.

Heath had the double whammy that their designs could not require serious test gear for alignment.

The result was that the hams who bough new gear bought so much Japanese-made and so little American made that the bottom fell out.

> By the way, the old Heath Tube-Audio junque commands a premium from
> the audio-nuts. I don't know why. It's not like -cough-cough-
> tube SSB transceivers.

Three reasons:

1) It's hollowstate

2) It sounds pretty good as-is, and even better with a few mods.

3) It is well documented and easy to modify.

> A word about tube audio vice tube (boatanchor) radio. The audio
> nuts say that tube audio is superior, produces better sound.

I could give you a pile of reasons for that, but it all comes down to one thing: What constitutes "better sound" is purely subjective.
>
> Generally tube SSB/CW types don't claim that. I have tube radios
> because they are inexpensive and I can fix them. Solid state

> radios could be just as maintainable but the manufacturers make the
> parts too small for me to work on. My SB-104A and SB-303 are
> really tube style radios (except for the 104A's digital readout),
> mostly big, cheap common parts.

They're also 30 years old. When I built my HW-2036, the parts looked
tiny. Now they look huge.
>
> It wasn't just the economics of kits, the Hallicrafters, National,
> etc were done in by something else.

They did not/could not keep up with the competition.

> In the 1960's, during the ramp up to Incentive Licensing, Wayne

> design and build products that would dominate ham radio and
> eventually electronics.

Wayne was and is full of it.

Japan has had no-code-test ham radio since 1952, when their government
took over the licensing from the occupation government. They got away
with it because of some creative interpretation of the treaty.

They have never had "low barrier" licenses - their written tests are
and were quite involved. Licensing beyond the 4th class required code
tests in both International Morse and Katakana.
>
> While other factors contributed to the die-off, there is no question
> that Wayne called it exactly right.

I disagree.

> Remember in the 1960's, there
> was essentially no Japanese amateur radio gear imported, except for
> that mechanical key and maybe code practice oscillators..

Not true. Lafayette was importing ham/SWL receivers from Japan in the
'50s. Allied did the same somewhat later.
>
> It probably wasn't until the early 1970's that Yaesu and Kenwood
> showed up. Now ICOM, Japan Radio, and others have the lions share
> of the market.

What really happened was that Japan was devastated by WW2, but began a
longterm process of rebuilding everything. It took some years before
they got to niche things like ham gear.

Post WW2 Japan did not get involved in big military spending, a space
program, or foreign entanglements. Their focus was on rebuilding their
country and becoming a world economic and industrial power. Once the
basic industries and infrastructure were rebuilt, they focused on

specific areas like consumer electronics because such items are relatively small and high-value. And because so much of their pre-1945 industry had been destroyed, everything was relatively new compared to US industry.
>

> every year at Dayton? What happened to the last run of HQ-215's or
> the last batch of NC-270's. Did National ever make a solid state
> radio, other than the HRO-500?

See above. Their managements reached retirement age and the required investments in new designs were not made.

Some designs were simply not that good, too. Compare the NCL-2000 to the Drake L-4B or even the SB-220. The latter are more rugged, less fussy and use cheaper tubes.
>
> When they turned the lights out at Hallicrafters, were there a batch
> of SR-500's in a warehouse that took that last ride to Dayton?
>
> Did people see bins of bare chassis or front panels at the tailgate

Some of that. Usually, however, the way it worked was that the last batch was sold off and then there were no more.

> I'm guessing that the die-off happened about 1970, give or take a
> few years. I didn't go to Dayton until around 1980 so I missed it.
>
> I also stopped reading the ham magazines between 1966 and almost
> 1980.

The ads alone tell the story. Collins hung on the longest, I think, making the KWM-380 because it was part of the deal when Art sold the company.

Ten Tec apeared in 1968 making little QRP rigs and just kept on growing. Look at the Orion...

Signal One came and went, but was a factor in "paradigm shift" about ham rigs.

> By the by, I'm here because I have started collecting and restoring
> boat anchors. I believe these are valuable collectables and that

> expensive. Currently the prices are rediculously low but that is
> about to change.

Not compared to what they used to be in the '70s, '80s and very early '90s. That was a "golden age", in a way. 'Nobody' wanted tube stuff. You could get all kinds of gear and parts at hamfests for a song. Examples:

- Working SX-101A in good condition - $35
- Very clean, almost mint working Viking 2 - $35
- Viking Valiant that needed the VFO dial coupling replaced, otherwise working and good shape: $25
- Unmodified clean ARC-5s - None more than $10. Often a whole batch for $10.
- Unmodified clean working BC-342-N - $2 (Not a typo - two dollars)
- QSTs back to pre-war: Dollar a year
- Receiving and small transmitting tubes - $1 each NOS, less for used
- I-177 or Hickok 6000 tube tester with book - $10
- 75A-4 receiver, VGC, working, with all mech filters, reduction knob, book, spare tubes, just aligned - $250

I could go on and on but you get the idea. I didn't get all of these, but I saw all of them at various 'fests within 2 hours of Philadelphia.
>
> Current prices are low because as hams age and go to the QSO party
> in the sky, their prized radios are being dumped on the market,
> primarily eBay.

That was going on 20 years ago, too, only it was at the 'fests.

> If BPL doesn't kill HF and I don't think it will, not because we
> will defeat it but because cable, DSL, fibre to the home, sat, and
> Gen-3.5 cell fones will crush the interest in BPL,

I hope you are right!

> the proposed
> no-code Generals and the almost no-exam entry HF licensees
> will double and triple the interest in Ham Radio.

Maybe, but I doubt it.

The requirements for a ham license have been dropping since 1975. They were radically reduced (both written and code) again in 2000, but we have not seen lots more new hams. There are a bunch of reasons, but I'll name just three:

1) Antenna restrictions
2) Free time doesn't come in big blocks for a lot of folks
3) You are looking at it.

> When that happens, everything Ham Radio, especially the historic
> radios that have "class" will soar in value.

That started 10+ years ago.
>
> Even if that isn't a factor, the weird, useless stuff that people
> collect, pottery, knick-knacks, wood furniture, carvings, Hummels,
> and so on, if an HT-32B appreciates as much as that stuff, it would
> be worth tens of thousands of dollars.

But it won't because the market for an HT-32B is far smaller.
>
> Maybe that won't happen but when I can buy a 1960's tube radio for a
> couple hundred dollars, it seems like a bargain. Especially when
> that radio originally cost two or three times that much.

Even more when you adjust for inflation. A 75A-4 in 1959 cost about
$700 - back when $5000 a year was a really good middle-class income.
>
> whatever. Tell me your stories from the die-off.
>
Just did.

And if you want to see what ham kitbuilding has become, check out
Elecraft.

Lew -

Radio Adventures has a Vintage Radio T/R Adapter that you should consider
This kit was featured in a QST article a few years ago, and has been in the
ARRL Handbook for the past few years.
The Vintage Radio Adapter consists of two assemblies, the keying and control
unit and a remote antenna relay. The control unit accepts key, paddle, keyer
or push-to-talk input.

Vintage Radio T/R Adapter (BK-175)
The Vintage Radio T/R Adapter provides automatic transmit/receive switching
for many vintage transmitters and receivers. It provides time sequenced
antenna transfer (with optional remote antenna relay), receiver muting and
transmitter keying in semi and full break-in modes or with push-to-talk
systems in AM or SSB. At less than $ 40 for the entire kit - all components
except power supply, remote antenna relay and enclosures.

I have for sale a Heathkit DX-20 CW transmitter. This unit has a t/r switch mod & an AC pilot light has been added to the front panel. As I no longer have an antenna, (I'm cleaning out the shack) I have no way to thoroughly check it. So, to be fair, assume it needs the usual repl of caps, some contact cleaner, etc. It has been in storage for some time.

Comes with original manual & two 40m xtals, but no crystal cover. .jpg's are available. $92.00+ shipping to CONUS.

If interested, please contact me direct at: K9ZTX@comcast.net

Source record: 23006

I recently found a beautiful, working T-195B transmitter to complete my GRC-19 station. Only one problem ... it has no meters. Fair Radio Sales reports there are out of stock and have no source for replacements. There's also references on the Web to a Michael Baranowsky (a.k.a. Baran's) in Pennsylvania who has R-390A, R-392 and T-195 meters and parts, but the listed phone number is no longer valid. And there are a few mentions of "reproduction meters" at various Web sites but no listed sources.

If anyone on this group can help me find a set of original or replacement T-195 meters (or even just the specs) I'd be very appreciative. Surplus Sales of Nebraska has a few meters of similar style in their catalog that perhaps could be made to work in a pinch.

If you can help, please respond via e-mail to ndrech@fast.net

Thanks for reading this post and for your assistance.

Two years ago, I was admiring a boatanchor at a Northern Maryland
Hamfest. Some folk got to talking about Signal/One and a large,
angry fellow started in on XXXX, that S.O.B., if I ever catch
him....

The last incarnation of S/1 was as a rebuilder of ICOM IC-781's,
something about software, filters, the military, or some such.

That fellow had sent his 781 to S/1 along with 6, 8? thousand
dollars. He believes that S/1 sold his radio to someone else, mail
fraud, grand theft, conspiracy to defraud. Donno what actually
happened but I've heard from others that "something wicked"
happened to Signal/One at the end.

Based on multiple reports, I believe that S/1 did turn criminal.

Too bad.

I have a mild interest in S/1. Towards the end of my first phase of
interest, S/1 was advertising heavily. I used to hear contest
stations clip off, "Signal/One Alpha", one word, real fast.

It was out of my price range. 30 years later, I bought a
"guarenteed dead" CX7A off ebay. I've got it working on receive and
am gathering parts to bring the transmitter back to life.

It might be beyond my ability to repair.

continuing the discussion...

I got interested in ham radio about 1960. I built an R-55 and a DX-60. At the advice of a fellow, John, who was really, really interested in ham radio but could not pass 13WPM at the FCC, I got my novice station together and working before I took the novice exam. Sound advice from him, "You only have one chance in your life to get your code speed up, the only way to do that is on the air. Have your station ready to go, the minute the license comes."

John was stuck with a useless Technician license. This was in Hawai'i

where if you could not get on 15, 20, and 40, there's no point to Ham radio.

I got my Novice in 1963. I was on the air with the DX-60 and an SX-101A. I could not get the R-55 working well enough to use as a 40 meter CW receiver, forget 15. It just didn't work above about 10 mHz.

My recollection was that the license exams were hard then.
I passed the general with a few months to spare.

About 1964, the years are blurring together, incentive licensing degraded my general and I took the Advanced. I still did not have the 20 WPM for the Extra.

I lost track of John. He was rebuilding a Superpro, experimenting with UHF because with a tech, in Hawai'i, the only way to get out was Moonbounce.

I find it odd beyond words that John's 1960'ish Technician license, schematic diagrams, hand calculations of series and parallel circuits, 5 WPM sending and receiving with 1 minute of solid copy at the FCC, no question pool, is arguably a more difficult exam than the current Extra.

I operated a lot between 1963 and 1970 and then tapered off until a couple years ago. I did get to two Daytons around 1980.

In the 1960's radios were very expensive. A DX-60 kit was about $70. I paid $200 for the used SX-101A. I clearly remember carrying it in the front door. At that time, all the old-line manufacturers were still going strong. The HQ-215 solid state Hamarlund had come out and folks were waiting for a solid state Drake.

Collins prices were climbing fast.

Someone mentioned RIT. It's important if you're working transceiver to transceiver. It's much less important if you're using a transceiver and working an HT-37/SX-101A. The station with the HT-37 won't re-zero when he retunes his receiver.

Also boatanchor receivers like SX-101A's had BFO pitch controls so, again, it wasn't obvious that a transceiver needed RIT until transceivers became common.

The 1960's were the transition from the big heavy radios to the relatively smaller Collins S-Line profile.

From this vantage point, there were dozens of U.S. manufacturers in the Ham Radio market in the 1960's.

Looking at the historic record, there is a layer of Iridium in the strata about 1970 and after that, the radio firms died off. It was parts, retail outlets, the entire sector collapsed. Again from today, 2004, it looks instantaneous although it took years.

Unfortunately, I dropped out of Ham radio to work on S/360 OS/MVT and then MVS systems so I didn't have the first hand experience of seeing the dieoff.

In the late 1970's, I did a brief turn as the rep to the Foundation for Amateur Radio, paid for an AMSAT life membership, but just didn't have time to operate and didn't buy the magazines.

In the 1970's, I bought a VVF accu-keyer kit. I wish those were still available, the nice big SSI TTL parts and the good circuit boards. I built it in an LMB box.

I saw folk running around with their Drake TR-22's. Seemed that everyone had one. I ended up with a Wilson WE-800. Whatever happened to Wilson???

And, I suppose, I: my Novice lapsed while I was off at school, then
I started working in the space program (read "6 or 7 12-hour shifts
most weeks"), then went in the military (read "no time while in tech
school, then no time while out of country") and then got into ...
working on MFT-II, MVT, and MVS systems, like No Spam.

Then I started acquiring boatanchors, after my late wife died. Some of
them actually have been known to work.

But I'm gonna get my General ticket Real Soon Now!

Personally, I got intensely involved in the music scene and became a sound
engineer. Traveling around the world with various musical groups gave me
little time/place/incentive to raise an antenna farm....

jak

Probably too late for me. However in stories like these, there might be
some hint of an idea where ham radio failed us--and we--it. The common
threads seem to have to do with time, money, interest, space...perhaps
relevance to the lifestyles we chose.

In hindsight, perhaps better minds than mine could have come up with a
solution in time....

The Tech and General were the exact same written test at the time. The General had to be passed in front of a FCC examiner whereas the Tech could be taken by mail.

I think the present Extra test is much harder than that General was then as far a *technical questions* are concerned. However the current ham tests are easier to memorize and pass without knowing anything. I will admit that as a high school student I was able to pass the General test in 1958 without knowing much... ;)

>About 1964, the years are blurring together, incentive licensing

Yep, did the same thing, although somewhat later than you. A guy by the name of Bash got me going. Seems he published a book with the *exact* questions and answers for the exams. Everyone seemed to think that was cheating at the time. How things change...

>has taken months to discover that the interference cannot be resolved."

Fat chance. That kind of power is reserved (by the DMCA) to
outfits like the RIAA/MPAA, who have only to assert there is material
infringing their copyrights on a website. The ISP is then required to
tear down the site while the site owner gets to try to convince
someone the material is not infringing. Or remove the material.

If it were allowed, the more likely scenario is that 300
subscribers who got cut off in the middle of their favorite T&A show
would immediately deluge the provider with complaints about being "cut
off because of some old fart across town who wants to talk to someone
he could just as easily call on the phone." The provider would likely

out the ham who complained of the interference that caused the
shutdown and sit back to watch the lynching on the 5 o'clock news.

It's not too late. I got interested again when a hand surgery went bad and my doc said to work my fingers or he'd send me to physical therapy (PT = Physical Torture).

I bought a beater SB-303 off eBay and began cleaning it up.

Fortunately it had been owned by a smoker and smelled of tobacco.

I had to wipe down the components individually, wipe the wires, clean the boards between the components. I spent a couple days learning the ins and outs of the Heathkit SB drive. I replaced the main cap, fixed a few other problems.

When I was done, I had a terrific SB-303, a better receiver than my old SX-101A. 1 kHz analog readout, 2.1, 3.75, and .5 crystal filters, better than 200 Hz/week stability from a stone cold start.

Re-invigorated, I downloaded the question pool, glanced over it for, oh, 1 or 2 hours and made the final upgrade.

I've dragged out my VVF accu-keyer from the 1970's and my Brown Bros. dual lever paddle. In spite of arthrytis and incipiant geezing I'm slowly rebuilding my code speed. I dropped out operating at about 15-20 WPM.

Probably like the rest of you, my health is an up and down thing. I clocked BP 250/100 on a thallium treadmill but passed the cardio-scan and logged a resting BP 110/78 a month later.

I don't think I let Ham Radio down. I did my turn as a rep to the Foundation for Amateur Radio. Even when I wasn't very active, I bought occasional parts and radios. My Wilson WE-800 has 10-20 hours of use. I built a Heathkit HO-10, AA-14, HW-2021, etc.

Between the early 1970's and today, other than 2 meters, I logged maaaaay-be 20 QSO's but in that time, I spent about $4,000, half in the early 1980's for an ICOM IC-720A and accessories. In retrospect, perhaps I should have gone for a Triton IV digital a few years earlier, the QSK.

I think the new HF entry license will help. I sure hope so. I've been listening to HF and it is not what it was in 1965. Too many round tables, too few stations calling CQ. Not enough fun.

It was fun working stations on 40 and 15 CW as a novice.

Thanks Jim,
Your response was well written.

Wayne Green has gotten too much credit - mainly from his own self
promotion.

Incentive licensing hardly killed off Amatuer radio or the
manufactorers of the time.

Increased competition from the Japanese probably was the largest
factor in the die off of the old American companies.

I've got a Swan/Cubic Astro-150A.
It's totally synthesized, solid state using military construction,

with plug in pcb's, full QSK, built in CW filter, etc, etc.
Its design date from around 1978.
Yet, they were only able to sell less than 1000 of them.
Why?
It cost $999 at a time when the Yaesu FT101 listed at only $699.

In my opinion, the Astro-150 is a much better rig, but at the time Amateurs voted with their wallets.

When the Drake TR7 was introduced, it was a $1400 rig that didn't include things like a speech processor or standard noise blanker when equivalent rigs from the Japanese makers were available for less than $1000.

The story of ham radio makes is no different than the story of U.S. TV makers. There are no TV's being made in the USA by companies that are based in the USA. Likewise, no VCR's, no CD players etc, etc are being made by USA owned companies.

I'm trying to recall, and hope someone here can lend a hand. On the "Uni-probe" for the Eico 232, was the resistor - in line for the DC measurements OR for the AC/OHMS measurements ? I know it was a 1 meg 1/2 watt, but that is all I can recall of it. I've been looking for a Uni-probe for my Eico, and since I've had trouble finding one, am planning on making one.

If you would, PLEASE answer direct, my news groups have been hit and miss lately. Just remove NO SPAM.

Hello Gang,

I am looking for a Heath SB-400 Transmitter. It does not have to be in perfect condition but reasonable. I would trade looks over operation as I can repair it myself. I am trying to round out my vintage heath station and am missing this piece.

Let me know if you have one and condition and price.

You can have the plug in for $15 plus shipping. I'll get back to you on
the CRT after I get it out.

Hi, Lew

I've had good luck with the E.F. Johnson electronic TR switch,
as well as the B&W models 380 and 381B. The 381B is not as convenient,
since it has a band switch.

The Johnson unit looks best for high power operation,
since it uses a TV sweep tube (6BL7), whereas the others
use receiving-type tubes. However, it runs hot and is pricey
on the used equipment market.

Dow-Key made a one-tube electronic TR switch, which is small
and mechanically elegant. (I've got one, but haven't tried it yet.)
It requires an external power supply.

One thing, if you go the electronic TR switch route,
don't forget to include a low pass filter in the coax
between the TR switch and the antenna, because you will
generate TVI otherwise, due to diode rectification
in the TR switch, even if your transmitter itself is clean.

The body count for failed BPL attempts seems to be rising. At the end
of the day the FCC will look very shiney in allowing these schmucks to
have their go. Just be patient and let technology take its course.
And work on that Spell-checker, bub. Its hard to whine and be taken
seriously on the internet when you cannot spell the key words like SPEECH.

Hammarlund HQ-180A NICE!!!!!
Also comes with the matching Hammarlund speaker.
Looks wonderful. Came from the original
owner,non smoker.
Oh, and the clock works GREAT also.
I've been listening to am radio on it and has a great sound. Letters
around knobs are not worn at all. Thought this was sold, But never
received funds.
All the Knobs turn smooth, Bright bulbs on front. What more can I say.
Price: 500.00 for all. To see picture go to: QTH.com And
go to HF rigs

Hi, Mauro

I have a Hallicrafters SR-2000 "Hurricane" transceiver, which is
the (slightly) big brother of the SR-400. I also have a KWM-2.
The Hallicrafters is easier to repair, since the Collins used
Vector sockets, to squeeze in components vertically as well as
horizontally. The KWM-2 is a bit more stable, I think
due to the use of varicap in the dial readout correction circuit
of the Hallicrafters.

The SR-400 has about 200W output, twice that of the KWM-2.
To accomplish this, the SR-400 uses TV sweep tubes,
which are now expensive to replace, while the 6146's
used in the KWM-2 are comparitively cheap.

A big advantage of the SR-400, to a DXer, is the accessory
external VFO, model HA-20, which allows for dual frequency receive.
I think that was a unique feature in the vacuum tube days.

Both the SR-400 and KWM-2 are high quality units,
although the paint job on my Hallicrafters cabinet hasn't held up
as well as the Collins. Both sound smooth on SSB transmit and receive.
The Collins does not have receiver incremental tuning (RIT).

The SR-400 has a great advantage on c.w., since it has a narrow
c.w. bandwidth available. The KWM-2's c.w. performance
is just terrible - it keys an audio tone into the mic circuit
to generate a carrier. Collins used a 1.3 KHz audio tone oscillator,
so you will need to listen to a received 1.3 KHz c.w. signal
to be zero beat. On c.w you will generate a weak carrier frequency
as well as your desired frequency, and a weak keyed spur
about 2.6 KHz down the band, at a strength determined
solely by the mechanical filter rejection.

73,
Ed Knobloch

3683. need info on RT-657/TLQ-15 military tranceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-04 01:50:20 UTC
From: Steve <zarco@sonic.net>
Message-ID: <wnJFc.272$54.3145@typhoon.sonic.net>
Source record: 22944

Hi Gang,
Picked up an interesting military tranceiver this morning at a radio swap. Its all solid state, but weighs a ton, and runs off of 115 VAC, 400 Hz (its a pseudo-boatanchor). Its an RT-657/TLQ-15, and I've been able to find out very little on the www. The TLQ-15 is apparently a countermeasures
set, but thats about all I can find.

With a bit of creative hacking, I was able to power it up. It is an all mode (AM, FM, CW, USB, LSB, and some digital modes) tranceiver that covers 1.5 - 20.5 MHz, continuously tunable (LED display). Based on the power transformer ratings and the output transistors, I'd guess it'll put out about 100+ watts.

Anyway, there are a LOT of BNC connectors, and a couple of other big connectors on the back panel. Sure would be nice to know what they go to! If anyone out there has one of these beasties, and knows anything about them, I'd sure like to hear from you. A couple of folks at the swapmeet
said its a spy radio....not sure about that, but it was probably used in an airplane.

Steve

The "T" in TLQ means Ground, Transportable - so it's likely not for
aircraft use.

I've just looked in "Janes" - I should have looked there first!

AN/TLQ-15 is a Communications and Countermeasures Set made by American
Electronic Laboratories, Lansdale, Penn. Intended to be truck or ship
mounted, but capable of being used airborne. It consists of a Rx and Tx
Covering 1.5-20MHz with CW, AM, FM or DSB and 2KW output in CW mode.
It is designed to lock onto transmissions and jam them using a 10%
recieve and 90% transmit cycle.
The whole installation is about 6 feet high and 3 racks wide.

3693. WTB: Johnson Viking Directional Coupler for KW Matchbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-04 23:05:18 UTC
From: larryj@teleport.com
Message-ID: <311bbdf8.0407041505.3e638a03@posting.google.com>
Source record: 22953
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Wanted: A directional coupler assembly for an E. F. Johnson KW Matchbox (may be also used with the 275W Matchbox and the EFJ external SWR Bridge). This is the cylindrical unit which contains the directional coupler circuitry which then connects with three wires to the meter in a Johnson Matchbox or SWR Bridge. It's a unit which is about 2" diameter by about 10" long or so, if I remember correctly.

I just picked up a nice KW Matchbox with the meter, but the external directional coupler unit was not included. I once saw a guy at a swap meet several years ago that was selling a big bunch of the directional couplers - New Old Stock, so I know there are some still around.

Thanks,

LJ

Thanks for the trip down memory lane. I remember well the up or out of the
Novice. I was lucky....I was able to get on 40cw as soon as my ticket

arrived. I jumped over the Technician and got the General in three months.
That was in 1961.

3696. Anyone know of a modern 60 Hz - 400 Hz converter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-05 01:38:46 UTC
From: Steve <zarco@sonic.net>
Message-ID: <Gi2Gc.516$54.5522@typhoon.sonic.net>
Source record: 22956

Hi Gang,
In the past, when converting equipment from 400 Hz power to 60 Hz power,
I've replace the transformer(s), and increased the size of the filter caps.
That was many moons ago.

These days, it seems like it'd be fairly easy to build something like a
switching power
supply but using a fixed frequency at 400 Hz instead. Has anyone done this
yet, and if so, I'd sure be intersted in the details.

Steve

This is the smart thing to do IF you don't care about keeping the equipment
original.

>These days, it seems like it'd be fairly easy to build something like a
>switching power

There are switching converters out there. The problem is that if you use
a square wave at 400 Hz, you get all kinds of harmonic trash, so you either
need to use a class B or better stage and suffer extreme inefficiency, or
use a "modified sine" inverter configuration. I don't think it would be
too hard to hack up some of the cheap truckstop 12V->120V inverters to
produce 400 Hz, though.

You underestimate the stupidity of mankind.
I remember a SHARES emergency communications test of
government HF communications a few years ago.
We couldn't raise one "hub" station in California,
needed to pass some traffic. So I called him.

"How come ya'll aren't on the air?"
"What the h**l do we need that for?
We've all got cell phones...."

I had the SR400, SR2000 and several KWM-2s. The Hallicrafters had some cross mod on 20 meters. Otherwise, a great radios. I think the SR400 also had an RIT (receiver incremental tuning). This is always good to have on SSB and only available on the KWM-2 as a Waters mod kit.

I modified a 140 watt unit using information I got from some where.
Only two capacitors had to be changed.
It worked well until I tried to run a motor from it :-(.

No I don't remember the details of the modification, but the new units
would probably be different anyway.

Was there much RF trash coming out of it?

>It worked well until I tried to run a motor from it :-(.

The modified sine wave units need to be derated by about a factor of four
to run electric motors, and the motors do tend to buzz a little. What
400Hz motors do you need to run? Antenna tuner?

Scott,
One of the advantages of running it at a fixed frequency is that you could use the primary of the 400 Hz transformer as a tuned circuit by putting an appropriate cap across it. That would cut down on the harmonics even if its driven with a power MOSFET.

Since no one seems to have built something like this from scratch, I'll start doing some bread boarding this week. If I'm able to get a good solid design, I'll post it.

Steve W6SSP
p.s.-keeping the equipment original is certainly one of my goals

The Six-Meter-DX email reflector is setup for the purpose of notifying
subscribers of band openings on the SIX Meter amateur band.
You may also post messages telling members of the list that you are
monitoring a particular frequency.
PLEASE keep discussion to a minimum. The reflector is set up so that message
replies go directly to the sender and not to the entire list. There are
other reflectors that are intended for discussions about the 50mc band.
Membership is open to anyone interested in 6 meter operation and will not
need
moderator approval unless the list starts getting flooded with SPAM.

Membership is open and you may subscribe your self by sending
a blank email to; Six-Meter-DX-subscribe@yahoogroups.com
To post a message send it to; Six-Meter-DX@yahoogroups.com
To unsubscribe send a blank message to; :
Six-Meter-DX-unsubscribe@yahoogroups.com

You can visit the Six-Meter-DX YahooGroups home page at;

I think most "collectors" only collect what the appraisers and
antique sales people tell them to collect. Watch a few episodes of
the antique shows on PBS. That junque is genuinely weird.

Compare it to a fine HQ-150 or a Johnson Valiant.

> Wayne Green has gotten too much credit - mainly from his own self
> promotion.
>
> Incentive licensing hardly killed off Amatuer radio or the
> manufactorers of the time.

In the early 1960's, Wayne predicted that there would be lots of
Japanese hams. When I got on 15 meters as a novice. I was running
a DX-60 with one 15 meter novice crystal and a ZL-special. I used
to work pile ups of JA stations all running 10 watts or some other
strangely low power. It suggested to me that they had an entry
license, perhaps comparable to our Novice that gave them 10 or maybe
it was 15 watts of CW.

I figured that Wayne was right and that the same "hook" that got me
fiddling with antennas, peering into the chassis of my SX-101A
trying to get a little more ooomph out of it, got them too.

I ended up an assembly language and PL/I programmer doing MVS
internals, telecommunications using TCAM, TSO internals.

Later when Japanese electronics took over, I figured that the same
fellows who I worked on 15 meters were now electrical engineers.
That was what Wayne predicted in his rambling editorials in 73
magazine.

3719. Trade Or Sell, DX-160 (2): Lafayette Ha 230, Computers

am looking to sell 2 RS DX-160 General Coverage SW Receivers and speakers,both in good to excellent Condition, all lamps working, 12 volt power cord with cig lighter plug, each has a 6 foot external telescoping antenna for table top use, and copy of manual. $90.00 each plus shipping via ups to lower 48.

Realistic DX-160
General Coverage Communications Receiver Made In: Japan 1975-1980 Voltages: 120 VAC 12 VIC
Coverage: 150-30000 kHz Readout: Analog
Modes: AM/SSB-CW Selectivity: 4 kHz
Circuit: Single Conversion Physical: 14.5x6.5x9.25" 15 Lbs.
Features: &#65533;" Head. Jack, S-Meter, Mute Line, ANL, Dial Lamp, Standby, Bandspread, Antenna Trimmer, AVC.
Comments: Ranges: .15-.4, .535-1.6, 1.55-4.5, 4.5-13 and 13-30 MHz. (Coverage gap from .4-.535 MHz.) Bandspread bands: 3.5-4, 7-7.3, 14-14.35, 21-21.4 and 28-29.7 MHz plus CB channels 1-23. Supplied with a matching external speaker (shown). Note the additional coverage of the longwave band.
both in good to excellent Condition, all lamps working, 12 volt power cord with cig lighter plug, each has a 6 foot external telescopeing antenna for table top use, and copy of manual.

Lafayette Ha 230 SW Reciver with speaker , in good to excellent condition, all lamps working and up to specs, six foot telescoping antenna attached for tapletop listening. 110.00, will not ship, will meet within 100 miles of NYC or Sussex Hamfeast in NJ on july 11th or Waynesville, NC
july 24th Orginal Manual included

Lafayette HA-230
General Coverage Communications Receiver Made In: Japan 1964-1966 Voltages: 110-220 VAC 50/60 Hz
Coverage: 550 - 30000 kHz Readout: Analog
Modes: AM/SSB-CW Selectivity: &#65533; 2.6 kHz
Circuit: Single Conversion Superheterodyne. 9 Tubes. Physical: 15x7.5x10.2" 21 Lbs. 380x190x260mm 9.5 kg
Circuit Complement: 6BA6 RF Amplifier, 6BE6 Mixer, 6BE6 Local Oscillator, 6AV6 Q Multiplier/BFO, 6BA6 First IF Amplifier, 6BA6 Second IF Amplifier, 6AV6 Detector/ ANL/First Audio, 6AQ5 Audio Output, 5Y3 (5CG4) RectifierOne RF and two IF stages.
Features: . &#65533;" Head. Jack . S-Meter . BFO . Q-Multiplier . IF Gain . ANL . Bandspread . Antenna Trimmer . Mute . Dial Lamp . Standby . AVC ON/OFF
Accessories:HE-48A Speaker
Comments: Ranges: .55-1.6, 1.6-4.8, 4.8-14.5 and 10.5-30 MHz. Bandspread for

80 through 10 meters. Requires a speaker. Always-on filament voltages on mixer and oscillator improve stability (otherwise electrically identical to the HE-30). Lafayette #99-2522WX.
Variants: Model KT-340 kit form $75. Lafayette #99-2521WX. Electrically identical to the HE-30 but with always-on filament voltages on mixer and oscillator.

Want to trade for Ham Gear:
2 AMD 1.0 mhz computers with win xp, cdr-w, 52x CR-rom, 56 k Modem, 512 Ram, 6 Usb Port, 10/100 Ethernet port, SC, 8 Meg Video, 3.5 floppy disk, 17 inch monitor, keyborad and mouse and flatbead scanner, all cables . Both in excellent condition. 200.00 each or trade for ham gear,will not ship, will meet within 100 miles of NYC or Sussex Hamfeast in NJ on july 11th or Waynesville, NC
July 24th

I have some SB-303's but they are still not at exhibition, museum
grade.

I'm guessing that the prices will rise over the next 5, 10
years and if a boatanchor radio shows up on that Antiques
Roadshow, next to the weird ceramics, the junque furniture, the
wooden chicken (an actual $1000+ item last night with a
cracked foot.), then we'll see boatanchors vanish from the
market.

Lemme see, a wooden chicken is $1,000, a ceramic vase that
looks like a oak tree with an owl AND a squirrel is over $1000
and a 40+ year old, nice looking, working Collins KWM-2 is $600???

Of course, another mystery is why KWM-2's sell on eBay for less
than SX-100's.

==== Lemme do my Antique Roadshow patter: ==

"It has the Hallicrafters logo on the front. We turn it over.
WOW, it has the original rubber feet!

You almost never see feet in this condition. The tubes are
all marked "Hallicrafters". -sigh- and there, there is the
actual two wire line cord.

All the knobs are original. -gosh- and there's just the
slightest chip in this one. Still though, these are highly
prized.

What do you think it's worth?

<the owner shrugs>

At a well publicized auction or in my gallery, -sigh- At least $18,000 for the SX-110"

<the owner squeals> Well Goolll-leeee. That's more money than I've ever seen.

============== End Antique Roadshow ==

de ah6gi/4 What? Trade an SX-100 for a wooden chicken, OK, the wooden chicken and the ceramic tree trunk vase with the owl AND the squirrel.

Seriously, given the choice between a wooden chicken, a tree trunk vase and an SX-100, is there anyone here who would pick the chicken and tree trunk.

Even knowing that SX-100's go for between $300 and $1100 on eBay and expert appraisers on the Antiques Roadshow say that the chicken and the tree trunk are both well over $1000 EACH, wouldn't you grab for the SX-100????

Doesn't this suggest that an SX-100 should be more expensive?

Just a final note to all here...

the Michigan Antique Radio Club's
19th annual "Extravaganza"
is THIS WEEKEND in Lansing , Michigan at the Holiday Inn South.
Exit 104 (Cedar St) off I-96.

this is considered by many to be the most friendly and accommodating swap in the USA for collectable electronics, and may now be the largest (only Rochester is possibly larger). Admission is free to the flea market and general auction, however , registration of $25 for non members and $15 for members is required for all other seminars and events.

Flea Market opens at 7am sharp Friday, July 9. NO SELLING or DISPLAY of items is allowed on the set up evening of Thurs, July 8 starting at 5pm.

Huge Zenith radio display and social evening indoors at 7pm.-10pm with band and cash bar. On Saturday, the regular auction starts at 2pm-5pm, then the "Good Buy Affair" bargain auctions starts outside at 7pm-9pm.
Come hang out even if you don't want to buy, its another social event! Much stuff sells here under $5!

Extensive advertising and publicity to general public results in many "walk-ins" with radios to have serviced, evaluated, or to sell. Many fine sets have turned up this way!

All 60 or so tables under the huge tent are sold out. All 300 regular spaces in the parking lot are probably sold out by now, but additional space in an adjacent gravel lot are being sold now. this is a good area if you have a motor home, but check with vendor coordinator Don Colbert on that. all inquiries direct to him at donsradio@aol.com.

There are several cheap motels in the area.
The host hotel is the Holiday Inn South. Its probably sold out for Thurs and Fri, but try it at 517-694-8123

others are:
Days Inn 517-393-1650
Econolodge 517-394-7200
Best Western 517-393-5500
Super 8 517-393-8008
Regent Inn 517-393-2030
Ramada Ltd 517-694-0454

Hope you can make it!!!

3725. Product detector for Hallicrafters S40A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-07 02:40:04 UTC
From: TerryJ <suptjudno@comcast.net>

Source record: 22986

I am considering adding a product detector to my S40A. Has anyone used a 6SN7 to replace the 6J5 BFO and feed the IF signal to the grid of the second triode with the cathodes tied together? The original oscillator circuitry would be wired to the first triode. Audio from the plate resistor of the second triode (after IF filtering).

--
Kind regards,
Terry Judkins

No, but I do have an SX-99 with a product detector already installed in it,
which I have no real need for any longer. It has a Collins mechanical
filter of unknown width and extremely low audio output. I think it was
originally done according to the QST article but I am not sure. It's
definitely a project set but make me an offer.

I'm sure its been done but the question is why would you want to?
Ok, its fairly deaf on 20 SSB and really deaf and getting quite unstable
for SSB on 15. Forget 10. Its more than adequate on 40 and 80 if you
ride the controls the way you should. I don't see where a product could
offer any improvement.

You'd be wanting QST for April 1954. "Modifying the S40 for S.S.B. Reception"
by Edward Sommerfield. It's also reprinted in the ARRL's "Single Sideband
for the Radio Amateur", first edition which came out in '54.

He adds a crystal filter for selectivity. Then a third IF stage to compensate
for the loss in the filter. He injects the BFO into the grid of this stage,
complete with a front-panel control for injection level. He changes the
detector to a 1N34 diode, but it's still an envelope detector.

He even shows a means of modifying the existing BFO for crystal control.

At a glance, he also ads a stage of audio, to componsate for the (likely)
use of the RF gain control to cut back on gain.

He adds a VR tube to regulate the voltage going to the local oscillator
and BFO. He even adds a tuning eye tube.

Hallicrafters must have used those mods and built the SX99.:)
Looks like I am reinventing the wheel. I have made a few changes
(reversable). I replaced the RF amp 6SG7 with a 6AC7 with appropriate
changes to bias, AGC and screen voltage, replaced the 6SA7 with a 6SB7Y and
replaced the first IF with a 6SG7. I also added a tuning eye which plugs
into the S meter socket and added a zener regulator to B+ for the BFO. It is
a VERY sensitive and stable receiver. SSB reception is just OK though.

Hi Terry:

I think your idea of using the 6SN7 is better than the '54 QST article. The 6SN7 makes a great product detector with 1/2 as the bfo. Not a lot of work. Audio might be a bit low, but you can cheat and use a transistor audio preamp powered by the cathode voltage developed by the audio output stage as a voltage source. I used a similar arrangement in an ARC-5. Just do not tell any of the diehards that you have a transistor buried under the deck or they will take you out of their will.

Re-inventing the wheel is not all bad

73, Colin K7FM

Does anyone have a good procedure for discarding 'blown'
mercury-filled tubes?
I have a few 811, 817, and 807s (some good, some not), and an un-id
(think 807-size) unit that has a pool of mercury in it as well as a
nice splatter pattern inside the glass. The glass and the base are in
decent shape (no cracks) so it makes an interesting conversation piece
("hey, hook it up on a tester and lets see what happens!" are,
unfortunatley, common...) but I am concerned about safe disposal of
the sucker.

Find a toxic dump, a local ham who collects them?? (I won't ship the
blown tube).

Thanks,

-arg

Thanks!

Here's two more factors:

Sometime in the very early 1960s, SSB became the dominant HF 'phone mode, replacing AM. The trend had started in the very late 1940s with ham SSB homebrewing became common and just kept going. One factor that really sparked the SSB boom was the introduction of the SSB transceiver, starting with the Collins KWM-1 and KWM-2, and the Cosmophone 35.

These were "stations in a box" that needed only antenna, power supply, mike and speaker to go on the air. Their cost and size was less than a comparable transmitter-receiver pair, and the headache of zerobeating was eliminated - just tune in the other guy right, and you are automatically on his freq. HF SSB transceivers became popular very quickly, to the point that they rapidly replaced all "separates" except those that were matched-pair transceive capable, like the Drake 4 line and the S line.

Before transceivers, there were several ham mfrs. who specialized in receivers or transmitters, or were best known for one or the other. E.F. Johnson made transmitters, National, Hammarlund and Hallicrafters primarily made receivers, etc. Those who made the transition to transceivers survived longer than those who didn't. Johnson, for example, developed the Avenger transceiver, which was way ahead of its time. Dual VFOs, all solid state except the finals and driver, compact, high performance - and it cost more to make than the list price of a KWM-2. A dozen or so prototypes were made, and a few survive.

The main market for "separates" were Novices, who were limited to crystal control and 75W input until the mid 1970s.

Some new mfrs. like Swan and SBE, started out making SSB transceivers from Day One.

The shift to SSB and transceivers from AM and separates had a bunch of effects:

- Homebrewing, steadily declining with increasing affluence and complexity of ham gear, took a big nosedive with the advent of the SSB transceiver. Few hams could homebrew the equivalent of an NCX-3 or SB-100 in their basements for less than the cost of those rigs, let alone the time.

- The space and cost required for a ham shack shrank dramatically. This was particularly true if you wanted to operate high power 'phone. Look at the price and size of an SB-100/200 combo - for about $600 and the kitbuilding time you could have a 1200W PEP tabletop SSB/CW station. Compare that to, say, a Viking 500/NC-300 combo...

- Old gear that could not do SSB transceive was sometimes kept, and other times rapidly unloaded as its resale value dropped. The value drop was driven by the limited market for such gear.

- The number of new hams recruited from the SWL ranks dropped dramatically. In the AM days, folks with SW receivers would come across hams on AM. This would lead many SWLs to become hams. But most SWL receivers don't receive SSB well, if at all, and completely different tuning skills are needed. So most SWLs just tuned past the unintelligible ham SSB garble.

This last was part of a much larger trend. From the reopening of US ham radio to about 1963, the number of US hams grew from about 60,000 on VJ day to about 250,000 in 1963 - quadrupling in just 17 years. Then the growth stalled and didn't pick up again until the early 1970s.

This loss of growth happened fully 5 years before "incentive licensing", and it was only after the new rules were in place that the numbers picked up again, so IL can't be the cause. What *did* cause it were:

- changeover to SSB
- competition from 27 MHz cb
- drastic reduction of the places where a Conditional license could be issued
- license and test fees
- changes in society, particularly young people. Ham radio has always been kind of a "square" activity, and in the '60s such perceptions "turned off" a lot of young people.

> Wayne Green has gotten too much credit - mainly from his own self
> promotion.

The rooster taking credit for the dawn. JA has had nocodetest ham licenses since 1952. They were on a rebuilding/industrial boom. They

were investing in development and new tooling at a furious rate while
US companies weren't. Favorable tax and exchange rates. Etc.
>

> When the Drake TR7 was introduced, it was a $1400 rig that didn't
> include things like a speech processor or standard noise blanker when
> equivalent rigs from the Japanese makers were available for less than
> $1000.

There's also the "line" aspect. Most US manufacturers of the time made
just one "line" of ham gear - Drake had the 4 line, Collins had the
S-line, Heath had the SB line, etc. Many did not offer VHF/UHF gear,
or the offerings were limited. But very early on the Japanese produced
multiple lines, such as the TS-520S and TS-820S, and a whole line of
VHF/UHF stuff. A ham could have an "all-Kenwood" (or Yaesu, or Icom)
station that covered 160 through 440. Few US manufacturers offered
such variety.

Sadly true.

At least in ham gear we have a choice: Ten Tec and Elecraft, to name
just two.

That's true in some cases, not true in others. But it's certainly a
valid point that at least *some* collectors are more interested in the
fact that something is worth $X or is considered "rare", rather than
its intrinsic value.

IOW, would they still like it if it was worth almost nothing?

> Watch a few episodes of
> the antique shows on PBS. That junque is genuinely weird.
>
I love that show. Besides the *smokin'* new host, the incredible
prices attached to some things are always a source of amazement. I
mean - a table lamp made in 1906 that's worth $120,000? A small table
from the early 19th century worth almost $500,000?

> Compare it to a fine HQ-150 or a Johnson Valiant.

One *big* difference is that we'd get the HQ-150 or Valiant and put
them on the air, not just look at them.

In fact, I find it's starting to work the other way with me. One thing
I used to love about BA'ing was getting some rig or other for a low
low price, fixing it up, putting it on the air, having a ball with it
and then eventually passing it on to somebody else. And if I blew
something up, or couldn't fix it, no big loss.

But when they are fetching prices higher than new, it's a whole new
ball game.

> it was 15 watts of CW.

They've had four classes of license for years, with the entry class having no code test. Entry class is QRP but allows a variety of HF modes. They used a twisted interpretation of the treaty to do it.

In years gone by, many countries required more than passing tests for a license upgrade. In some cases, construction of receivers and/or transmitters of a given level of complexity was required, and an oral examination given on how the set worked. Another element was requirement of a certain number of stations heard/worked with the constructed equipment. The old USSR was a big one for that sort of thing. JA may have done it, too.

> I figured that Wayne was right and that the same "hook" that got me

The trend was clear early on. Building up the nation's technical and manufacturing base was a national priority in Japan from VJ day forward.

Interesting thing about 'prophets' like W2NSD - people remember the few times when they were right but forget the many many times when they were not.

> magazine.

Maybe. Ham radio has led many of us to engineering careers, me included.

But consider this:

Since 1995 the number of Japanese ham stations has been in free fall. Google up AH0A's website - interesting numbers.

Don't be fooled by the enormous number of JA *operator* licenses - their operator licenses never expire, so what you see under operator license totals are the total number of hams that have been licensed in Japan since 1952. One ham can have as many as four operator licenses.

The important number is the number of *station* licenses, which cost a fee and have to be renewed each year.

And he's had more time after the fact to write about it than he did
to talk about it before incentive licensing came into being.

While it's been some time since I've gone through them, I read and reread
back issues of 73. I don't recall any mention of Japan in the sixties.

Indeed, Japan seemed to be a non-entity at the time. They were starting
to make inroads, likely a lot of the accessories were increasingly "made
in Japan", but as you already mentioned, they were often sold with
a US name on it. "Made in Japan" still seemed to be a fairly derogative
term, denoting sloppy design and/or workmanship.

But then when Japanese companies were the major players, say from the mid
to late seventies, of course Wayne wrote about Japan. Saying after the fact
that the Japanese rules made for such growth, in hams and their ham industry,
is a lot different from seeing it (or not seeing it) before it had happened.

The same can be said about incentive licensing. I have no doubt that Wayne
disliked incentive licensing, but I'm not so sure he foresaw what would
happen. I don't think he cared. He didn't want to lose frequencies, and
that was his main opposition. But after the fact, he could find all kinds
of things that happened, whether or not they were a result, and blame
them on incentive licensing, and of course say "I told you so".

I don't have the animosity towards Wayne that many seem to have. I liked
73 when it was in its prime, and that was a serious contribition to amateur
radio. But you can indeed see his "after the fact" predictions. He often
stretches things to fit his scenario.

One really has to go back and read his editorials from the sixties in order
to define how much of he foresaw, and what it was he foresaw. His later
editorials are much more vivid (and were repeated many times), but that does

not mean they were what he said in the sixties.

When did Incentive Licensing take effect? I thought I took the advanced about 1965 but maybe not. Maybe it was later.

I "thought" Wayne Green in the early 60's predictied the collapse of the U.S. electronics industry, which was invincible at that time. Given the outcome, and not to take anything away from Ten Tec and Elecraft, Drake if they're still in business, but the U.S. Electronics industry, at least in the HF RF side, has died off.

I was in high school in the early 1960's. While the Japanese made a few small in-roads in consumer electronics, the U.S. owned Ham Radio. The U.S. stuff was QUALITY.

I still remember the excitement of the HRO-500, the SBE-33, and seeing the pictures of the FPM-200 in the magazines.

The proprietor of the local radio shop said that the S-Lines and KWM-2s were going to Vietnam so a lot of guys were going for Drake, "the DX-er's like Drake."

Recently, I've heard two stories from that era, one is that at the end of the war, they stacked up KWM-2's and R-390As, and ran tanks over them.

The other story is that there are cache's in Vietnam with KWM-2s wrapped in plastic and buried.

I don't know if either story is true.

I have a nice collection of boat anchors and hope to restore them to their glory, to be used, not to sit on the shelf, as "shelf queens".

I don't have a lot of time to work on the radios. I'm trying to earn enough money to retire some time.

I got my novice license at 15 and passed the general at 16. Two other guys and I took the bus down the the FCC because none of us had a driver's license. We all passed. I still remember the snippits of the code, it was a ship talking to the harbor. One minute solid out of five, 13 consecutive words. That was the rule. I don't get this new style exam.

Someone help me remember. Didn't the FCC give out Techs as a consolation prize if you only got five words in sequence? I'm trying to figure out how John ended up with an FCC credit Tech.

Or was it, if you failed the 13, they gave you a shot at a 5 WPM tape and then let you take the general written. Or did people show up and ask to take the Tech?

I remember before I took the novice, I was pretty confident that I could pass the general theory and mentioned the possibility of taking the Tech and not the novice. John was adament about getting the novice first, for the HF code practice.

I gotta say that those were my best ham radio years. This was in Hawai'i and you could work inter island easy on 40 all day. Saturday, I'd fire up my DX-60 and call CQ de WH6FHN. It was great. There were lots of novices but every other station was a general or extra who slowed way down to give the novice some practice.

I had a crystal dead in the middle of the novice band, 7175. Several others had the same crystal and we'd work zero beat.

I used my 40 meter dipole on 15 meters and began working DX, JA's mostly but a few ZL's and VK's too. Not to shabby for a novice with a straight key and a DX-60.

Heathkit should have named it the DX-75 and added, power can be increased to 90 watts when you pass the General. It sounds odd now but I remember wondering if a novice could use the 90 watt DX-60.

In 1963, I sold my DX-60 for $40 to put toward an HT-37. At the time, I didn't think much of it. 40 years later, I bought a "doesn't work" DX-60 on eBay for $70. It's on the floor of my workroom. When I get it going, it'll be my novice station.

My SX-101A is still in Hawai'i cluttering up my mom's house but I have the next best thing. A fellow GAVE me an excellent SX-100 with an outboard digital display. I can use it with the DX-60. It even has the same wide skirt IF filter sound of the SX-101A and the Notch Filter to fiddle with.

What fun. Forget that cell fone junk. I'll ease into geezerhood with 1960's radio's. I got a 100 foot coil of stranded copper wire and some RG-8X. 66 for a 40 meter dipole, 33 for a 20 meter dipole. I also have a TH3jr tucked behind the woodpile.

I _SAW_ the folks at the Osan AB MARS shack tossing R-390s or R-390As into a dumpster in October 1969, when I was outprocessing at the end of a TDY. They told me I could have as many as I wanted, but my hold baggage was on its way back to Camp Drake already.

> The other story is that there are cache's in Vietnam with

Since you are intrigued I guess I should explain further lest I give you the wrong impression. I also came along about a decade later. I bought the rig when I was abaout 16, used, in about 1973. This was the last years of AM VHF in California. A year or two later I traded it in against a Kenwood TS-700.

Ah.

And that's exactly what Jim was talking about.

Right at that point, the old tube rigs were pretty much seen as junk,
so people like us coming into the hobby could get them at great prices.
I brought home various rigs from the local ham auction and even people's
junk piles, played with them and then traded them off.

It was very cheap to get into the hobby that way at that point. You would
see it all the time in the photos in the ham magazines, young people with
older rigs and they had neat stuff.

It's only with the passage of time that the stuff became valuable, and
not to get newcomers on the air, but because people as they aged regretted
getting rid of their old stuff, when they were no longer using it.

After 1954 Techs were by mail order *only*. Before that they were before the examiner (or by mail if the distance requirement was met) so I suppose the consolation prize thing at the FCC office could have been policy then. I had not heard the phrase though until some years later after the VE testing started.

Not sure if this was posted, so here's the retry....

The tube I though was perhaps an 807 is really an 872-A, VT-42-A. One is clean (might evrn work) and one is blown (mercury pool). I suppose I could extract the mercury and sell IT on ebay... Nahhh, looks too nice. :)

Maybe I'll just break 'em in a dumpster.

A mercury pool does not mean the tube is no good. Check the filament with an ohmmeter. If the vacuum has not been lost and the filament is good, the tube may be good and would be uesful to someone who uses 872A tubes.

Remember that one mans trash is also trash to the wife of the man who wants it.

Somehow, I missed that. About 1962(?) I bought an SX-101A, it was
$200., a year later, 1963 I paid "about" that for a working HT-37.

In the early 1970's, an SB-101 was about $200 but it wasn't working. It took me years to build up to opening the LMO an fix the frequency jump problem.

About 1970, the HW-32/HP-23 was about $150 to buy and sell. It was dead when I got it and working OK but off frequency when I sold it a year or two later. I'd guess this combo is a little less than that today.

Between 1970 and 2002, I didn't do much radio shopping except for the ICOM IC-720A in the early 1980's. $2,000 including the optional filters and power supply.

For a Rip Van Winkle, Active shopper between 1960 and 1970, active on the air between "about" 1962 and 1970. Briefly active about 1980, and again after 2001/2002, it seems that prices did not change that much.

The biggest differences are:

1) The U.S. manufacturers suddenly vanished. It doesn't seem gradual to me. One day they were there, the next, they're all gone. There's a thin layer of iridium in the strata marking the dieoff.

2) Boatanchor prices are consistant but not in constant dollars. $200 was a LOT of money to a 15, 16 year old but it bought amazing technology and quality.

$200 today is still a lot of money, it buys a 20 inch color TV set, VCR, DVD player, AND an external speaker system. It also buys a nice boatanchor.

3) The new stuff doesn't seem "better" than the old. The ergonomics are bizarre. The old stuff was carefully designed, knobs were large and either ribbed (Hallicrafters) or fluted (Heath and Collins). The lettering was large and precise.

The old man-machine interface made sense, clockwise to increase, up is on. The physical knob orientation indicated the setting of the control. The KWM-2A aux crystal bank shifted into position and changed the lettering surrounding the knob.

The new stuff is a cruel joke. The knobs are too small, like toothpaste caps. Press a button here and something over there works differently, the clue is on the LCD panel which is not in proximity to either.

Given the typical suburban antenna farm, a tribander and a wire dipole for 40, any upgrade or downgrade in QTH or antenna counts for more than the radios.

I managed to hang onto most of my old gear but then, I wasn't much of a buyer or seller (until recently). Any of my old stations was serviceable, even the HT-37, SX-101A. The problem with the

boatanchors was the frequency readout. Collins and Heathkit solved that with mechanical indicators on linear tuneable oscillators.

At 57 and trying to build retirement savings, I don't have a lot of spare time or money. Retirement isn't sitting slack-jawed all day long. It means having enough income and assets that I don't have to put up with management's baloney, the Ken Lays and Bernie Ebbers of the corporate world and their toady minions. I especially don't want to spend the rest of my life listening to their hallucinations and nutty ravings (I blame Dilbert for exposing the reality of the corporate world.)

I'd rather refurb my radios, figure out how to re-fill the metal can 3 section capacitor in the 75S-1, practice my CW to keep my fingers flexible.

It might not happen, but I'm hoping that the boat anchor market takes off and I can sell my SB-303's for "Antique Roadshow" kinda money. Until then, I'm figuring out how to clean and restore them which is fun.

If it happens... $10,000 for an SB-303, well, I can dream, can't I?

1967: Advanced reopened, 2 year Novice
Nov. 22, 1968: First reduction in bandspace (CW/data and 'phone) for
Generals and Advanceds
Nov. 22, 1969: Second reduction in bandspace (phone only)for Generals
and Advanceds.

Note that in those days the 30, 17 and 12 meter ham bands did not
exist, and that the 'phone parts of 80, 40, 20 and 15 were narrower
than today. Originally the Extra-only CW/data subbands were supposed
to be 50 kHz in the second reduction but this was eliminated by FCC
shortly before it was supposed to have taken effect.

I don't either but I know the following story *is* true: Pallets of used R-390As were stacked ~10 feet high and left out in the weather at a supply location. I saw the picture and it was claimed to be genuine. These were units that needed work but were mostly complete. The stack was at least 25 x 25 feet, and the picture didn't include the whole pile. Even as parts units, their value to hams is staggering.

Dunno if there were any Helena Rubenstein '390As in there....

I got the Novice at 13 (1967), Tech and Advanced at 14 (1968), Extra at 16 (1970). That was back when you had to wait two years as a General or above for the Extra.
>
> Someone help me remember. Didn't the FCC give out Techs as a
> consolation prize if you only got five words in sequence?

Yes.

After 1954 the Tech was a by-mail license, like the Novice. But if you showed up at the FCC office and missed 13 per, but they could find five legible words, you could do the Tech/General written and get a Technician. Then you'd only have to come back for the 13 wpm code. Saved a little FCC time and paperwork, I think. Also made it easier for the ham because you could focus entirely on the code test.

I know 'cause that's what happened to me first time. Examiner couldn't read my writing well enough to find 65 consecutive legible characters but he did find 25. I got a Tech, went home and taught myself to block print rather than the stupid "Palmer method" longhand script, and passed it after the 30 day retest wait was up.

After I did, the examiner said "Kid, why not try the Advanced while you're here?" Though I had not studied for it, a 14 year old kid did not say no to The Man, so I tried and passed.
>
> Or was it, if you failed the 13, they gave you a shot at a 5 WPM

> tape and then let you take the general written. Or did people show

Normally Tech was by-mail.

Good times.

If the filament is good and glass isn't cracked, the fact that the mercury has condensed does not mean the tube is bad. What it does mean is that the tube hasn't been operated in a long time. In this case the filament should be operated for half an hour or an hour before applying high voltage in order to vaporize all the mercury inside. Applying high voltage to a mercury rectifier with liquid mercury on the tube elements can result in a spectacular sound and light show...

Hi, at the moment I'm refurbishing an old radio that was originally built from a project in the 1960 ARRL Handbook Page 119 The 2*4+1 Superhet, it is a superb design and works really well for such a simple receiver, is it possible to find out who designed it? I can't find any reference to that in the project, I'm writing up the refurbishment and would like any info on the original design..

3754. National NC-240-D substitute speaker hookup info needed:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-08 15:56:32 UTC
From: yardleyite@aol.com
Message-ID: <20040708115632.23777.00001282@mb-m28.aol.com>
Source record: 22865

Hello All,
I just acquired a beautiful National NC-240-D receiver without it's original NC-2TS speaker. I'd love to get the receiver operational. From what I understand it uses more than a field coil (choke) to connect the B+ in the speaker to make it operational. I've had previous experience with Hammarlunds, etc that require a field coil to activate the B+, but I think this one is different. From what I can tell it actually needs a PP audio output transformer to make it work.

Would anyone be able to give me any advice on how to hookup a generic speaker to it? I have both 8 ohm and 500 ohm speakers I can use.

Is there anything I can jumper out, etc to make it work? Any information will be greatly appreciated.

Also, if anyone has a spare NC-2TS matching speaker for sale please let me know that too!

Very Best Regards,
Joe Cro N3IBX

3756. Any info on WJ-8690 Receiver?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-08 16:59:17 UTC
From: acorda@1bigred.com
Message-ID: <e5a32a17.0407080859.10e4c99@posting.google.com>
Source record: 22866
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Does anyone have any info (i.e. band coverage, features, rs-232 command set, etc.) and/or know where I could find a manual on a WJ-8690 Receiver. I've done a web search, and have come up blank. This unit isn't even listed in the Watkins Johnson product list (on the the premium radios website). There is a surplus reseller that has some of these available (and they look kinda interesting), but he has no info whatever on them.

-Thanks!-
-al-

Absolutely true. In fact, the presence of shiny silver mercury is one
indication the tube is still good!

> What it does mean
> is that the tube hasn't been operated in a long time. In this case the

This should be done with the tube vertical, base down *ONLY*.

> Applying high
> voltage to a mercury rectifier with liquid mercury on the tube elements
> can result in a spectacular sound and light show...

And then it *will* be bad.

If it is bad, don't break in a dumpster!

It seemed gradual to me. EFJ and H/H were the first to go. National hung on a bit longer, Drake even longer and Collins well into the 1980s with the KWM-380.

> VCR, DVD player, AND an external speaker system. It also buys a
> nice boatanchor.

Agree 100%. The only way to really compare is to figure out how many hours of typical teeenage-job work were needed to earn the rig.

For example, a DX-60 kit was $79.95 when I was a Novice. You also had to pay to ship it. Minimum wage back then might yield you $1 an hour after taxes, and many kids got less than that by doing jobs like mowing lawns and shoveling snow.

So that DX-60 cost 80-100 hours of work, and you still needed crystals, a receiver w/ accessories, key/mike, antenna and a TR system.

Today, one can expect to take home $5 an hour or so for those jobs. So 80-100 hours work translates to $400-500.

These times too. This is not a boat anchor story but my old clock radio was getting hard to set. I did fix it once but I recall I paid $10-$15 for it, a while ago, 20 years maybe.

Big spender that I am, I was in "Big Lots" and saw a GE AM/FM/CD clock radio, model 7-4901. $29.95. This is a great clock radio.

It comes with the time preset and backed up by 2 AA cells. One slide switch sets the time zone, a button toggles day light savings time on and off. Two of the biggest headaches of digital clocks solved. If you have to set the clock, there is a forward and BACKWARDS time set button. You don't have to go all the way around.

Two side firing speakers. I'm not an audio nutcase. I know that monster wire is a scam and toob audio loonies are nuts. The sound is GOOD.

Half my boat anchors are solid state, SB-303, Signal/One CX7A, and half are tubes, 75S-1, SB-102. Give me better than 1 uV sensitivity and 2.1 kHz filter and 1 kHz read out and I'm happy.

Nice looking receiver!

The power supply "smoothing chokes" are within the receiver, so you do not need to concern yourself with that. The factory speaker is a permanent magnet speaker (no field coil).

However, the PM speaker enclosure needs to have the audio output transformer. Connector X1 pins has the B+ and the two 6V6 plates.

So you need to obtain an push-pull output xfmr if you wish to use the "speaker output." The transformer is fairly common even today.

Alternatively, you can use earphones or an external amp by using the earphone output. The earphone output is taken from the stage preceding the PP 6V6s.

The schematic is available from the BAMA site. Or let me know if you would like me to email it to you. It's format is PDF.

Um,

These tubes should not have any mercury in them to begin with. I think that you might be looking at the "getter" material splattered on the sides of the tube.

They don't. Only mercury vapor rectifiers have mercury in them.

811s and other tubes with thoriated-tungsten filaments have thorium in them,
which is slightly radioactive.

Late 1968.

>Yep, did the same thing, although somewhat later than you. A guy by the name
>of
>Bash got me going. Seems he published a book with the *exact* questions and
>answers for the exams. Everyone seemed to think that was cheating at the
>time.
>How things change...

It *was* cheating. Here's why:

At the time, the exams were secret. The exact Q&A were kept locked up by FCC.
"By mail" exams required that the volunteer examiner certify that s/he would
not copy or divulge the contents to anyone. The Advanced and Extra weren't
available by mail at all. You had to wait 30 days to retest because the
question pools weren't very big.

The FCC published a study guide of essay questions that gave a good indication
of the subject matter on the test, but not the exact Q&A.

What Dick Bash did was to ask people coming out of FCC exams what the exact
questions and answers on the test were. He paid for the information.

Some folks in the FCC wanted to prosecute him, but the top dogs said no. A few
years later, FCC turned the whole testing process over to the VECs, saving
themselves a lot of time and money.

But at the time Bash did his thing, it was clearly cheating.

>
Yep.

Things like that do happen - some time back there was an unopened unbuilt AT-1 on eBay. Date code of 1956, one of the very last AT-1s, sat on a shelf for more than 40 years.

Final bid price for that kit (original price $29.95) was $5100. That's not a typo - five thousand one hundred US dollars.

Hi all,

Hope you'll excuse this FA announcement in sci.electronics.design...I normally avoid such things, but thought that these classic books might be of special interest to someone here.

It's a set of three texts covering ELECTRICAL (as opposed to electronic) engineering: Carl Edward Magnusson, "Direct Currents," "Alternating Currents," and "Electric Transients." These are from 1929, 1931 and 1926 respectively. More details at http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=6911709550&ssPageName=STRK:MESE:IT and of course I'd be happy to answer questions by email.

Cheers,
Tom

3781. Drake TR-4C -- need advice -- PTT not working

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-09 15:15:39 UTC
From: k5dh@raytheon.com
Message-ID: <vEyHc.1$jd1.0@dfw-service2.ext.ray.com>
Source record: 22892
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently bought a Drake TR-4C / RV-4C / AC-4 station
which came from an estate. The gear is nice and clean
and appears to be 100% stock.

After I rebuilt the power supply and replaced a couple
of tubes, the station is operational with the exception
that I have no push-to-talk (PTT). VOX works fine on CW
and SSB. I replaced the 6EV7 tube, and that didn't help.
I tried two different microphones and got the same result
with both of them. Both mics work fine with my B-Line,
so it's not a mic wiring or switching problem. Before I
dive in with a voltmeter, does anyone have any suggestions
on what may be wrong, perhaps based on personal experience?
And yes, I'm aware that the CW key must either be closed
or unplugged for PTT to function.

Thanks and 73,
Dean K5DH

If you are set for SSB operation and plug a key in, does closing the key
transmit?

I would start looking at the CW key jack and the microphone jack and
the associated wiring.

Nope. Closing the key yields a momentary click of the T/R
relay and that's it.

>jack and the associated wiring.
>--scott

Already looked at the wiring. Didn't see anything wrong with
it. No evidence it's ever been tampered with, either.

FT:Yaesu FT-901 DE
Turns on and I hear stations on receive,
But alot lower than my Kenwood 520.
I have no Idea why the receive is low.
And to TX I'm told, has to have
connector on the back for tx to work?
No rubber feet or carry handle.
Looks fine and frequency display
works nicely. No Microphone or manual.
Has power cord.
Will trade for 1000 Watt Antenna tuner.
Picture will be on QRZ.com

872A's were used as HV rectifiers in the Johnson Desk Kilowatt
and Collins KW-1 transmitters. They can handle 1.25 amps average d.c.,
which is five times the current rating of the 866A.

I bought some +used+ 872A's from Antique Electronics supply
a few years ago, and I think they were priced at $20 each.

Actually the number of US hams is still growing, but very slowly. See

http://www.ah0a.org

The slowdown in growth started about 10 years ago - long after the time periods
we were discussing.

Hello Dean, I am presently restoring a TR4 and just finished checking
out the mic circuit..On the side of the TR4 you find the first jack
is phones, second one is mic,take a clip lead and short the mic
connector key wire(tip of connector) to ground,it should key up the
relay...tube V19B 6EV7 is Vox tube,it works for Vox and PTT,if vox

works PTT should work also...look at first grid of V19,pin 2,move to left to junction of R142,R105 and R108 ,key this junction to ground with test lead,relay should close..Also notice the three resistors connected to pin 2 are high value 1M, 3.3 M & 6.8 M..Hi value resistors will always go bad with age,take them loose and check them with good meter,if they are over 10% hi change them..Be glad to help if I can , call on phone if you need to... Your old Raytheon friend Harold W4PQW

>I can't believe Hill topped out at $20- what a skin-flint!

Grasshopper, you fail to grasp the Tau of eBay bidding. :) One good strategy is to bid a small amount early and a large amount at the last moment. The small amount is in case you and another bidder bid the same amount - in that case whoever bid first wins no matter how small the initial bid. The large amount at the last moment hides your interest from the observer and allows you to do a search for similar items at the penultimate moment. If Hill is an experienced eBay buyer you will not know his final bid until the auction closes.

Anybody who had to go to Atlanta for their tests in the late 60s and
early 70s will remember the ill-tempered old biddy who dealt with exams.
She had a special place on her list from those of us from the
Charlotte area because we were 'supposed' to go to Norfolk instead of
bothering her.
Passing one of 'her' tests had a bit of added satisfaction.

No jumpers are needed on the remote connector. Just make sure the
crystal selector switch inside the top of the receiver is set to the
internal VFO (max counterclockwise switch position). Also make sure a
speaker is attached. Let us know how it goes.

FT: Update FT901DE Works!
I found a wire and as advised,
I wired the Accessory plug pin 1
and pin 2 And the transmit came on and put out 120 Watts!!
Now the only problem is the receive is low and I was told by Yaesu
it sounds like the Transistor in the RF stage needs to be replaced for
receive to come up higher. Not sure how to do it and you need the
right part.
Anyway, I want to trade for a 3 KW Tuner.
MFJ/ATR Tuner etc
To see a picture of the 901 DE go to QRZ.com Or QTH.com

>
>With what? FCC didn't do a thing.

If the government wanted to prosecute Bash for corrupting their tests as you say
then they must have felt cheated. Course now that Bash type tests are the norm I
guess they got over it.

>>Fossil hams when the Government started using Bash test methods.
>
>I'm only 50 - not quite a fossil yet...

I wasn't necessarily meaning you Jim since I'm well over a decade older than
you. I meant Fossil hams as in old thinking. Such as feeling cheated that
someone can memorize the tests (Bash or as currently given) and pass. Or feeling
cheated that their frequencies were taken away (me).

>>And you Jim when I have my Extra given to me for sitting on my butt... ;)
>>
>When's that going to happen?

From what I read, change is now in the works. I hope you won't feel cheated when
it happens Jim... ;)

>You have Advanced, right?

Yep. FCC Examiner no less. I should feel cheated about these VE's.
(I don't though).

>Which means you've been waiting as much as 36 years.....

Actually no. Shortly after I got the Advanced I went back to all CW ragchewing.
Been doing it every since. I don't even own a mike anymore and haven't needed
those Advanced privileges, so having an Extra probably won't change much. Except
maybe I can wave it around the newsgroups to bring all the fossils out... :)

(And I can finally get over feeling cheated about losing my frequencies-I'll be
a fossil free ham again.)
>
>Good to hear from ya, "Aaron".

You too Jim, always fun jousting with you... :)

Dunno if the 901 is similar but I recall a friend who had suffered
with puny receive on his rig for a long time and it turned out to be a
simple fuse lamp on the input that had blown.

3816. non-destructive mods to Hallicrafters SX-28?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-10 22:46:08 UTC
From: Phil Nelson <philnelson@nospam.xyz>
Message-ID: <Qk_Hc.11437$R36.1422@newsread2.news.pas.earthlink.net>
Source record: 22927
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I received the following question from a visitor to my website. Anyone out there have an answer? Some of you have stacks of old CQs, etc., much bigger than mine. I usually frown on modifications to old gear, but this sounds like it could be harmless fun.

Regards,

Phil Nelson
Phil's Old Radios
http://antiqueradio.org/index.html

I thought perhaps you might be familiar with an old article describing some modifications (reversible, non-destructive) to the SX-28. It described a series of improvements, one of which was an outboard additional i.f. stage using a 6BA6. Another was a product detector using one and a half 12AU7s. I think it appeared in an issue of CQ Magazine or similar publication, probably from the Fifties or early Sixties.

By any chance do you know what magazine and issue/year it appeared in?

3820. FS Collins Gold Dust Twins

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-11 01:35:23 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <wP0Ic.36140$Ch.14416@okepread04>
Source record: 22931

I have for sale a Gold Dust Twins Station including a Collins 75A-4 receiver, Collins KWS-1 transmitter and matching Collins power supply, and Collins 270G-2 speaker. The 75A-4 has been recapped and aligned by Glen Zook. It also has the 7360 first and second mixer mod discussed in the Collins 75A-4 Modification Compendium. It works well. The KWS-1 is unchecked. I purchased it some time ago with the intention of putting it on air, but never fired it up. It is complete except for the hose and the key/lock. I was told that it was working when taken out of service around 10 years ago. There is an antenna relay addition. I do have some information on it noted in the manual. The original manuals for the receiver and transmitter are included.
The cosmetic condition of the 75A-4, 270G-2, and the KWS-1 are outstanding, near CCA Excellent. The Power Supply cabinet has some chips in the paint and some scratches that have been touched up with correct paint. It looks good, but not as good as the rest of the gear.
I can send digital pictures upon request. Price for the entire station is $3500 picked up in Abilene, Texas. I do make frequent trips to the Dallas area and could possibly deliver it to someone near there. I really don't want to try and ship it, however. This is a nice set and I believe with a little work would
make a great operational station. Thanks, Charlie Hugg, K5MBX

I had this same problem (and easy fix) on a Kenwood R-600. Only it wasn't a
soldered-in fuse lamp, but a genuine mini-fuse, such as found in VOM inputs.

We ran a modification for the S-40 receiver that used a dual triode
which worked as both a product detector and AM detector. I
suppose it could be added as a plugin device on one of the tube
sockets. The article was by Ed Engelken and ran in Popular
Communications a few years back.

Myself, I am going to use the Central Electronics SideBand adapter
on my S-28.

I saw an article about a vacuum tube product detector circuit
which used no B+, the article appeared in Pop. Communications in 1998 or
so. I thought it might be an April fool article. Sorry, I didn't
save it for future reference.

Maybe it was an April Fool's article. Anything similar published
nowadays might be considered so given the going price for an unbothered
SX-28.

The first thing that came up on a Google search was Murphy's Surplus
(Mike Murphy). He prefers e-mail instead of phone calls.....give
him a shout. He may even have service information on this unit.
Somewhere in my archives, I've got an old WJ catalog, and I believe that
this receiver is in there, along with several others.

3832. Viking Valiant restoration

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-11 14:59:13 UTC
From: bcrowell@excite.com
Message-ID: <fd943ad1.0407110659.dd279c3@posting.google.com>
Source record: 22943

I recently obtained a Johnson Valiant that is in fairly decent shape and works on CW, but it has had quite a few modifications installed by its previous owner. Modulation is absent on AM. SSB input and output have been added, and clumps of components have been added here and there. (I don't know what most of them do.) My feeling is to put the radio back to stock (except for adding some of the accepted mods), use it only on AM, and use one of my rice boxes on SSB instead. What think you, and what would be the best method for duplicating the stock wiring?

Hi guys!

I'm in need of specs and wiring data for a couple of old Hammond audio transformers, used in a transmitter that I'm restoring.

Specifically, I need data on a Model 432 and a Model 1696.

I believe that the 432 is a Plate-to-PP Grids transformer, and that the 1696 is a PP Plate to PP Grids transformer.

I'd be happy to pay the reasonable expenses of your providing information to me.

TNX!

Source record: 22797

I bought an NC 60 Special from someone on this group a while back. The radio works pretty well, the case is in decent shape......but the face arrived in a dozen pieces. The packaging obviously wasn't up to par for the rough handling by the USPS employees (I suspect my neighbor, who is my letter carrier & she's scared of the big bad construction worker next door. Figure she got to the front step, dropped the package and ran back to the safety of her truck). Anyways, anyone have a basket case NC 60 that can part with the plastic face/dial cover?? Sure would be appreciated. This was going to replace my 5R10A (bedside radio) while I reconditioned the Halli.

Thanks for any help!!

Mike

Some brand new composition resistors followed me home from a fest
today. More than I can use! I have 50 to 100 of each value. These
are
Allen-Bradley 5% just like used in the original equipment. I
have the following:

47 ohms, 390 ohms and 1200 ohms--- all 1/2 watt

15 ohms and 180 ohms --------- all 1 watt

All are still in their plastic wrappers. Will trade for your excess
or
sell if you don't have anything to trade.

Thanks,

Bill

That unit had a CBY number-only used by the Navy, IIRC

>and another the 'AM broadcast' band;

BC-946

>Circuit diagrams for all appear virtually identical; very minor
>differences in component values (usually for the low frequency
>BC453) and some use a 12SF7 instead of a 12SK7 as the second IF
>tube/valve.

Yep. The IFTs and RF coils are plug-in, too. It's clear that a basic Command
set rx could get quite far down the assembly line before a decision had to be
made about what range it would cover. And if a set got shot up in combat, a lot
of its parts could be used to keep other units going.

>But can anyone advise if the tuning capacitors in these various
>models are identical/similar????

They're all different.

>Or a source for their mmfd. values?

BC-455 is 62 uuf per section. BC-454 is 142 uuf per section. I think BC-453 is
365 uuf per section.

>Got a BC455 (6 - 9.1) where someone has stripped virtually all
>the plate off the tuning cap; in fact it will turn all the way

>Other wise the Rx. is pristine and unmodified! Any suggestions as
>to why?

Bandspread and/or tuning range.

There were all sorts of mods to improve the bandspread and change the tuning range of those rxs. The IF of the BC-455 is so high that it would be OK for 10 meters and maybe even 6. Since the RF coils are in a removable plugin unit, they could be played wit fairly easily.

>Following W.W.II many command Rxs. on the surplus market and in
>connection with it, coils for replacement in the RF, Mixer and
>Loc. Osc. so that they could modified to 12 volt AM/Medium Wave
>car radios. The BC453 with it's 85 kcs. IF was also used by
>amateurs as a Q5er to 'sharpen' selectivity.

Yup.

They could also be used with crystal-controlled external converters. A really good 80/40 receiver could be had by putting a simple crystal controlled converter in front of a BC-453, using the '453 tuning. Inexpensive nonhamband suplus xtals do the heterodyne job (4050 for 80 meters, 4300 for 75 meters, 7550 for 40 meters, etc.)

>BTW I've seen several command Rxs. where the miniature potted
>headphone output transformer was burnt out when people have
>modified the 12A6 output tube circuit to get more volume!

Yep. That little transformer is a really good one but it's not meant for 3 watts of audio. btw, the original sets are meant for 4000 ohm loads while the -B models can be used for 4000 ohm or 300-600 ohm loads by moving one wire on the output trans.

3844. New Program - XTL_SET.exe

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-12 15:46:59 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <ccubpj$8nt$1@hercules.btinternet.com>
Source record: 22805

New program XTL_SET.exe

About 60 kilobytes.

This program is both practical and educational. It is based on two loosely-coupled tuned circuits. There are several applications. The circuit of a 'crystal set' is illustrated. Tuned circuit L and C settings and the coefficient of coupling between the two coils can be varied from the keyboard while observing how signal power and voltage levels change at several points during a tuning-up operation.

The signal source is a broadcast transmitter of adjustable power output which radiates a groundwave. The radio path distance and ground path resistivity are also adjustable. A simple inverted-L receiving antenna of given length provides the signal for the receiver.

Download XTL_SET in a few seconds from website below and run immediately.

Well, it won't be too long till I retire from my current job, but that doesn't mean I'd be retiring from the world. Win asked me a similar question when we chatted on the phone a couple weeks ago about the RF Design magazines...he asked what I was keeping. It took me just a short moment to say, "my mind." Indeed I am keeping the references I actually use the most, but I had an awakening, if you will, that all the things I was keeping around were becoming more a burden to me than a blessing. If others can get use out of them, that's wonderful. It will save space in the landfill while helping both me and them. A small percentage of what I'm disposing of I'm putting on eBay, but most I'm just happy to give to folk that can use it. I've discovered a local retired EE who volunteers at a couple high schools, trying to get students interested in electronics, and they will be the beneficiary of lots of parts and some small pieces of test equipment that are redundant to me. And in fact, Win may be the recipient of some other books not necessarily offered to the "general public." John did get a couple of interesting ones...a small token of thanks for one that he sent me a while back that has special meaning to me.

And if what I'm doing encourages others to share freely of what they have but no longer really need...I'll be pleased indeed.

Cheers,
Tom

(My postings here are liable to be pretty sporadic until my cleaning is further along. But there may be a few more "free" offers or the rare "FA" posting.)

WTB: TS-520S REMOTE Plug Not ext. VFO Plug
On the back it reads REMOTE it has 8 pins and in the center it has a
hole with a key fit.
the other one says ext vfo, I do not need the EXT VFO.
The one I need says REMOTE on the back pnael.
Is this the one you have?
I want to hook up an Amp to it and I need to work off that plug.
Rich

That's not Kenwood-specific; it's just a plain ol' octal socket, which takes
an octal plug. Used to be dirt common; a little rarer these days.

Get an old octal tube and breakthe glass away leaving the socket. That's the part you are interested in.

A friend of mine found this in a house that was being remodeled and the new owners wanted it gone. A Supreme Transmitter Corp. model AF-100 serial # 7/F/283. A little rust, a little corrosion, but in pretty good shape for a rig that looks like it's from the 30's or 40's. Missing one tube, has two plug-in coil assemblies marked 40 and 75 and what look like the remains of two others. Switches and knobs feel good. 12"x 29"x19" and about 100 lbs. Located in central Tx. A google search turned up only two brief mentions of this beast, both suggesting it's rarity. Interested in swl related gear or (with two kids in college,) cash is always good. 73 Steve

3867. PS connections for NCX-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-15 01:28:53 UTC
From: rkhen@softhome.net
Message-ID: <7007f740.0407141728.6c8a0dcc@posting.google.com>
Source record: 22828

I've got an NCX-3 HF xcvr with a fried power supply. The rig's PS connector is a big, square 12-pole affair. The manual says the poles are wired like this:

1 -- power switch
2 -- power switch
3 -- -80 volt bias @ 6ma
4 -- 12,6 volt heater @ 5a
5 -- speaker ground
6 -- common ground
7 -- speaker
9 -- +280 volt @ 125 ma
11 -- +700 volt @ 300ma

(the missing poles are unused)

My question: is it possible to fire this rig with my 25 amp Astron 2-pole 13.8 volt PS, and if so, how do I wire it to that big square plug?

TNX,

Rob Henderson

Triode Electronics (Chicago area) has this in stock.
http://store.yahoo.com/triodeel/index.html

The US made Amphenol "86 series" WPI plugs and sockets are readily available
from a number of sources.
The series has a: 4 pin, 5 pin, 6 pin, 8 pin and 11 pin models.

For conventional chassis mounting(with screws and nuts), Type S Sockets
require the mounting plates listed on the web page.
The 86-3-13 and 86-3-24 covers may be used with Type S sockets and 86CP type
plugs for making "umbilical cords" (such as your remote cable).

The 8 pin and 11 pin are the most common.
The 6 pin socket & plugs are the ones normally used with older Leslie
speakers (like 147 & 122) with tube amplifiers, that attach to Hammond
organs.

> plug?
>
The only way a 12V supply could power that is if the rig was
set up to run off 12v.

There were tube rigs that had little DC to DC converters, built in or
as modules that plugged into the rig, so one could run them off 12v.

But that connector indicates no such thing. There is no place to
feed in just 12V DC, and the fact that it is expecting various voltages
is a good indicator that you need a complete power supply, that
will supply:

> 3 -- -80 volt bias @ 6ma
> 4 -- 12,6 volt heater @ 5a
> 9 -- +280 volt @ 125 ma
> 11 -- +700 volt @ 300ma

By making the power supply remote, it allows for much more flexibility.
You don't have to lug around a built in power supply, that might be
a waste if you only used the rig at home or in the car.

So you could choose between an AC supply, or a DC supply, and plug
either into that socket. Or, if you ran the rig in the car, leave
the DC supply there, and then bring the rig into the house and
connect it to the AC supply.

Bummer about the virus aspect... probably a good idea to stay away from
these titties.

At first glance the message seemed rather off-topic for radio
newsgroups. However, I suppose this unconventional use of silicon could
make it slightly on-topic. Silicone is certainly a more common material
for boob work. Silicon seems a bit hard and brittle for the task. The
new knockers must have been expensive, though.

Does anybody recognize the closing word? Looks vaguely Eastern-European.
How does one pronounce it? (I know... "just like it's spelled.")

Not possible. Hit eBay or a big hamfest and find a Heathkit HP23,
any model. 23, 23A, 23B, etc. Should be about $50.

What's wrong with the NCX=3's power supply? If the transformer is
OK, you can fix the rest of it for a couple dollars. If the
transformer is bad, it's essentially a basket case unless you feel
like rewinding it.

The Allied Knight-Kit TR-16 6m xcvr had a really neat system. It had a normal
120 VAC PS built in, but the transformer had extra windings that used a pair of
big old Delco transistors on the rear panel as a 12 VDC inverter.

A single big Jones connector served both hookups. You made a 120 VAC line cord
that wired up to one Jones socket on certain pins, and a 12V cord with its
Jones wired to the other pins, and a cigarette lighter plug on th other end.
Both worked fine for me.

I did it it was pretty funny to have a 100% tube rig with a puerly sorry-state
inverter, but it was the best usage of each technology. I forget whether the
rectifier was a 5Y3 or a pair of silicon diodes ... 73, Mike K.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday July 18th 2004
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

==========
I don't know about the EICO, but most of the "kit" type signal
generators have the same problem. Lots of the leakage is through the
AC line cord. Usually it is bypassed to the chassis, but adding
ferrite beads/sleeves on the AC line inside and outside the cabinet
should help. Commercial signal generators have one of those "canned"
type EMI filters in them, adding one of those should to the trick.
Also, make sure all the cabinet and chassis screws are tight.

Best Regards,

Ed
Canyon Lake, TX

Hi Ed,
Thanks for the response. I did originally suspect the line cord and added some filtering but no change.
Interestingly, I have run some tests and most of the RF seems to be spraying off an area of the aluminum front panel behind which is the frequency setting variable capacitor. Also, I get some very intriguing nulls in the leakage around the disk screwed to the cap shaft that has 0-100 calibration markings as a logging scale. I'm suspecting it is acting as some sort of Faraday screen.....but maybe I've been chasing this problem too long. Hi hi!

Bob

The large aluminum dials on many RF generators had phosphor-bronze "fingers" behind them to keep them well grounded. Also, the paint around the front lip of the case where the panel is screwed on should be scraped off if it isn't already. The attenuator assembly should be shielded from where the RF enters it to the output connector.

RF leakage is one of the big differences between service type generators and professional equipment. The other is, of course, accuracy of calibration.

Is the transformer of your power supply smoked?
(I assume it's the National a.c. supply type NCX-A).
If you are lucky, you may just have a bad
electrolytic capacitor causing fuses to pop immediately.

If the power transformer is still OK, the rest of the power supply
should be reparable.

Anyone have an idea what quantities of these famous wartime aricraft equipment were produced. ?

ART-13
BC-348
BC-375E
SCR274N series

Just an estimate.

Thanks

Ralph

It would seem better to locate or clone the correct NCX-3's mobile SS
12v supply/similar; surprised to hear some say it can't be run of 12v
as-is when it was designed to do so. FWIW I have both supplies & the
rig (not interested in separating) - the mobile supply is compact &
fairly simple AIRC from its schem. Wouldn't mind parting with it cplt
for a tempting offer (not a giveaway).

Of course it can't be run off 12v as is; you even state that when you
talke about getting the mobile supply.

He wanted to know if he could apply his 12V dc output from his power
supply the the NCX-3 and run the transceiver. And the answer is no,
it needs the mobile supply.

At that point, unless one wants to run it in the car, he is better off
buying or building an AC supply for the thing.

huh? He asked if he could wire his 2-pole 13.8 PS to the square
plug on the back of the NCX3. The answer is no.

My advice is to get a Heath HP-13. These are about $50 on the Bay
and very plentiful. I have two for my 3 SB transceivers, so that
leaves one extra out there.

I'm not itching to get another HP-13 either as I have the Heath DC
supply and as you point out, I could use a big 12 V supply to run
the transceiver using it.

I'm sticking to my (and the others) point. If the NCX AC supply's
transformer is good, fix whatever else is wrong. A bad cap or
diode, a bad switch, whatever. Everything else in there should be
cheap and simple to fix.

If the transformer is bad, sell it on eBay as "Bad Transformer -
Full disclosure" Someone will buy it for the case or will take a
shot at fixing the transformer. Get a Heath. Folk use the Heath
for everything.

Don&#65533;t forget, the CC-AWA&#65533;s Summer Swap Meet
is coming up in just a couple of weeks, on
Saturday July 31st. in McGalliard Falls Park
in historic Valdese North Carolina.
This will be our second year in the GREAT
location. Valdese is located just off of I-40
in western NC.
As always admission is FREE,
and it&#65533;s just $5 for vendor setup.

You can find detailed driving directions and
more info by visiting the CC-AWA web page
at; http://www.cc-awa.org
Just &#65533;click&#65533; on the menu button for the
&#65533;Summer Swap Meet&#65533;.

Just a reminder, these events start early, usually
between 7 & 8AM, and it&#65533;s all over by lunch time.
Do yourself a favor, get there early so you don&#65533;t
miss all the goodies. Show up after 11AM and all you
see is folks packing up the good stuff they bought
while you were still asleep.

See there,

Ron

3905. Oval Powercord Quest (SX-100, SB-303/313)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-19 10:36:17 UTC
From: No Spam <"No Spam"@Nospama.net>
Message-ID: <ifgU75G3LLdo-pn2-pRzdiodsOX53@localhost>
Source record: 22764

This is what I know.

The powercord on both my SB-303 and SX-100 is made by Victor. Both are marked 7A 125V. Both have the Victor name and the V in a diamond logo. These are three wire cords.

There is a current production cord that looks like it but is different. The pin spacing is different. The pins are in a different geometry to the oval shell.

There is a fellow selling Heathkit SB cords on eBay. He has two wire cords, not three.

There was a rumor that Singer Sewing machine dealers carry the cord. I have checked with two local sewing machine repair depots. They don't recognize the cord.

I have looked up replacement cords in the "Brewers" catalog. Brewers is a wholesale supplier to the sewing industry. Their catalog lists many different sewing machine cords but nothing that looks like this.

There is a dealer in Georgia who shows a cord that resembles the SX-100 cord on their website. Nice folk, good to deal with but the cord they carry is much larger and will not fit the SX-100 or SB-303/313.

Someone told me that the local TV/Radio parts wholesale outlet had bins of the powercord. Well, maybe 20 years ago when they also sold Ham Radio equipment. They only stock useless LAN wiring and such now.

A fellow told me that the cord was used on professional Video equipment. I haven't followed this one up but it seems reasonable.

-- Laptop Cord Mod --

A three round pin laptop cord can be force fit to work in the SX-100. There is an issue as to whether the pin-out, hot, neutral, and ground, is the same. I have not checked this. Caution advised!

I made it fit by cutting the plastic of the pins apart with a hacksaw. Bend your hand to point your fingertips at you. Touch your thumb to your little finger. You're making something that looks like that.

-- IEC retrofit --

The alternative, retrofitting an IEC socket, is not viable for a collectable boatanchor like an SX-100 or SB-303/313.

For vintage test equipment, well, maybe. I don't know if there is a collector's market for vintage test equipment.

It does not look like an IEC socket will fit without cutting the chassis.

-- SX-100 pricing --

I've been watching the sales on the Bay. Seems that better examples are going for just over $1,000. While this seems high, the SX-100 was over $300 in 1960. That was a lot of money.

A prized collectable anything from that era should be priced even higher.

The question is whether the SX-100 and other antique radios follow the pricing model of, say, consumer electronics and become worthless as newer, better products come on the market.

Or do they follow the model of collectable antiques.

If the SX-100 is a desirable piece, similar to a ceramic treetrunk vase or a hideous lamp (items commonly seen listed for thousands of dollars in the antique shoppes), then the price is low.

Given the possible future value, I would not modify the SX-100 chassis.

--

Source record: 22767

I have about 330 mostly radio type books for sale.

That is way too much to list through baswaplist email.
So, I have placed the list on my web site, but I have
Listed a few examples below:

The list is at:
http://www.muchstuff.com/yebu34/df7re4jn/bksfs-3.htm

I will mark books sold, when I get what appears to be an unconditional email
stating that the sender intends to buy, and I still want to sell..

There is great incentive to buy many books, because the total shipping is
$3.00 per order, not per book.

They can be paid for by: Check, Money Order, VISA/MC and even by PayPal, I
really
prefer credit cards to PayPal, as I have a large minimum charge to pay on
the
merchants credit card servicing account every month.

Hi, Bill

There's a review in May 1955 QST. Says it runs
on either 115VAC or 6VDC, using separate power cables
plugged into the single receptical.
Looks like a nice rig. I like the 6252 final -
that's the baby brother of the Amperex 5894 dual tetrode.

Posting this for my buddy Dan...

R-1143B AN/WRR-3B manual needed.

Would like a manual, or even pay for a copy of the following Navy dept.
longwave receiver circa 1962. The nomenclature tag indicates AN/WRR-3B, also
R-1134B/WRR-3, made by Bendix.
This is a longwave receiver that covers from 14 - 600 KHz.
Also, I'd like to hear from anyone who has one of these, or is familiar with
it.

Thanks!

Dan Gutowski

Source record: 22775

My HT-32 is up for sale. I can no longer lift anything that heavy.

It is in working order, and in use on 20, 40 and 75 every week.

Cabinet was repainted long ago (not by me), and is "ok" but not great,
and one knob, (operation), is incorrect for the plain HT-32. All tubes
checked and weak ones have been replaced, and I've cleaned the t/r
relay.

I have images available to anyone interested in the classic boatanchor.

PICK UP ONLY IN SIMSBURY CONNECTICUT, please.
$250, and I', hoping to not put it on eBay.

Thanks,
Bob

Somehwere I have a rather thoroughly gutted R390A IF module. Maybe I can
find it and check whether that coil is still on it. If so, it's yours for the
postage.

Source record: 22781
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: From a local estate sale - an R. L. Drake model L-4 (not the L-4B) HF Linear Amplifier. This is for the Amplifier Deck ONLY - the power supply was searched for at the estate sale, but was not located and is not included with this amplifier. It appears to be in good physical condition, but is missing the plastic front panel knob for the Band Switch. Perhaps one is still available from Drake in Miamisburg, Ohio.

I believe this amp uses a pair of 4-400A tubes, and a spare, untested pair is included. Since there is no power supply, the amp is untested and is sold as-is. If you need an HF amplifier where you can supply your own power supply, or need a parts unit, this would be a good deal. $275 plus shipping from Oregon.

3921. The two 75A-3 receivers have been sold.

3934. Alpha 77 Amplifier from Estate Sale Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-25 01:48:25 UTC
From: larryj@teleport.com
Message-ID: <311bbdf8.0407241748.313c1ce9@posting.google.com>
Source record: 22695
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I picked up an Alpha 77 PA amplifer today at an estate sale ($35.00!)
It looks like the previous owner tried to make a bunch of
modifications to it and it definitely appears inoperative. It does
have the tubes (two 8877's) installed and the RF Deck section of it
looks pretty good. It's missing some cabinet pieces - the top cover,
the front decorative trim piece that appears to go over the front
panel, and it looks like there have been some serious modification
attempts to the HV rectifier section, etc. No AC cord was included
that plugs in a multiple conductor jack on the rear. The amp has a
name plate on the rear panel which says that it's a model "77 PA".

Does anyone do "restorations" on these old Alpha amps?
Are case parts still available?
What's the difference between a model 77 PA and a 77 SX?

Thanks,
Larry

Larry -

Alpha Manuals (if you did not get one)
http://bama.edebris.com/manuals/alpha/

Yes, you can either have this restored by Dick Byrd N4UQ
(Photos and notes on Dick's web site)
http://www.n4uq.com/

http://www.n4uq.com/forsale.htm

http://www.n4uq.com/faq.htm

OR you can send it to Alpha (they are still in business).
I talked to Alpha 2 weeks ago and they had a 77 model in for restoration.
Their technical support can answer most of your questions on availability of
parts.

See? They got the money, so they win.
Just like I said:

ARRL Seeks Clarification of FCC Response to BPL Interference Complaint
(Jul 23, 2004) -- The ARRL wants the FCC to further explain its recent
response to a North Carolina amateur's complaint of BPL interference.
FCC Office of Engineering and Technology (OET) Deputy Chief Bruce A.
Franca replied July 22 to an April 27 BPL interference complaint from
Thomas A. Brown, N4TAB, of Wake Forest. Brown had complained of BPL
interference to his amateur HF mobile station emanating from a Progress
Energy Corp (PEC) BPL field trial in the Raleigh area. In his letter,
copied to ARRL, Franca said an on-site investigation had concluded that
PEC's BPL trial "is in compliance" with FCC rules and that the company's
ham band notching efforts "are effective" to avoid the potential for
harmful interference. ARRL CEO David Sumner, K1ZZ, however, cited
evidence to the contrary....

Not just the money, but arrogant and corrupt.

corrupt: (adjective) 1. highly offensive or reprehensible in character, nature, or conduct. 2. Seeking sordid advantage with little regard to moral or legal bars.

Of course, if this might be construed as a criticism of the Bush administration, it's policies, tactics, or attitudes, then I stand in danger of being considered "liberal", that is to say, a fuzzy-headed obstacle to the progress of this great nation; a disrespector of our troops in Iraq; and a likely suspect harboring anti-government attitudes.

Obviously we have no further need of Amateur Radio for emergency communications or for providing a pool of trained communicators, now that we live under the security umbrella of the Department of Homeland Security. In which case, our conservative patriotic establishment could suggest that we "hobbyists" have no further justification for "squatting" on the public's priceless radio spectrum; thus the Administration may feel obliged to auction the amateur allocations off for more deserving corporate purposes.

Ya think?
Gray

Did you ever dismantle a Murphy B41 and retain the turret assembly or the gubbins, I mean the coils and capacitors? If you did and you want to sell then please let me know, I'm after the front end of the B41.

Cheers. Rich. West Yorkshire UK.

> Obviously we have no further need of Amateur Radio for emergency
> communications or for providing a pool of trained communicators,

A few weeks back I caught a 'Modern Marvels: Machines of the
future' show on Discovery or TLC - they were discussing a design
'on the drawing board' for a drone 'communications airplane' -
they explained that in the aftermath of a major attack or loss of
satellites, there will be a need for some kind of 'emergency
communication platform' that could relay critical emergency
communications when the 'normal' channels were out of order.
So we're spending billions developing these drone aircraft
to create an emergency communication network by deploying
a fleet of them around the country to allow coast-to-coast
contact between emergency agencies.

Ironic, isn't it?

FS: R. L. Drake model AC-4 AC Power Supply. This is the AC Power Supply intended to provide filament and HV voltages for various Drake Transceivers and Transmitters, such as the TR-3/TR-4, T4/T-4X/T-4XB/T-4XC radio. It could also be used on many other 1960's/70's HF transmitters and transceivers by using a different plug to mate with the desired radio. From a local estate sale, appears to be in very good condition. $60 plus shipping.

Which, even *more* ironically, brings us very quickly around full circle
to the opening premise: yeh, its the $$$!

The way to absolute control of the society is through the garnering of
sufficient money and influence; using public funds to attract a larger
circle of corporate interests to one's side, and then cementing that
relationship with the kickback of "contributions" to ensure that the
major party can control the public influence machinery; this becomes a
tightly closed feedback loop, with the corporate media an eager and
willing third party, because again, there are mega-bux to be made
through a perpetual market of media buys and privileged access to the
public information generators.

In this tightly-closed loop, both dissent and opposing fact become both
unwelcome *and* irrelevent.

Some foolish dissenters proposed that our 'star wars' missile defense
system was unproven and unworkable. Without hesitation, the 'tests' were
jury-rigged to provide a 'positive conclusion' and the dissenters were
crushed. As we speak, anti-missile missile systems are building in the
Aleutians.

Then, more amazingly, the 'new think' was advanced that 'proof of
concept' is irrelevent to rapid deployment; first we'll put as much as
possible in place, then we'll just keep hammering away at it until

something 'better' is developed. This is a formula for a perpetual money-sucking and influence-building machine.

And in this atmosphere, we hams and the ARRL actually *believe* that something as inconsequential as data, fact, test results, testimony, reality, and reasoned argument will have sway or influence on the intended outcome--the nationwide deployment of BPL at a rate to be determined by the power line industry??

All the FCC has to say, is: "Our field engineers see no violation ...." Everything else is thus swept aside as irrelevent.

Bwhhhaaaaha ha ha ha ha ha ha .. !!

We've taken a giant leap forward to the "logic" of Orwell's '1984.' It's enough to make a reasonable man weep. One might to a Google search for a speech this summer by Bill Moyers, entitled "This is the Fight of Our Lives."

My absolute contempt and fear of this relentless tidal wave of government corruption is bringing me out shouting, and seeking to call attention to this travesty.

Okay, end of rant.

But the only thing that will discourage the widespread deployment of BPL in the United States is pure economic reality: if the power industry can't compete with other delivery systems, it won't survive (much).

But if it does offer profit-making opportunity, try not to stand in front of the FCC steamroller !!

> See? They got the money, so they win.
> Just like I said:
>

Well, the FCC isn't going to stop BPL, but I don't know if much money is involved. As far as I can tell from the press reports, the BPL vendors are shopping their scheme on easy terms to various power companies. Even so, many of the power companies aren't interested, or drop it after a test period:

"Energy East, NYSEG and RG&E have NO PLANS to develop BPL capability in their WNY coverage area under the current state of BPL development. "It's just too risky and we have high priority work more closely related to our main business," was the message from a company spokesman."

"The company had been approached by a vendor earlier in the year to participate in BPL testing. They were looking for business opportunities to improve their bottom line. However, they were also aware of the potential of this controversial system to generage negative publicity and tarnish their company image, and were most circumspect in their approach. "

http://www.gobpl.com/ee.html

Their BPL tests were at Penn Yan.

Of course, all the BPL press accounts are suspect. Generally the reporters aren't technically literate and they're just passing information through from the BPL vendors.

The gobpl.com site is one of the few BPL information sites which takes a skeptical look at BPL:

http://www.gobpl.com/index.html

The power companies have, at best, a mixed enthuasisiam for BPL. They seem most interested in taking advantage of a side benefit of BPL which can continually monitor power lines for failures. BPL will have to be both cheap and reliable to be profitable, and that still seems iffy. I don't know if regulated public utilities are allowed to make campaign contributions, but BPL might not look like enough of a pot of gold to free up campaign funds, anyway.

The BPL vendors do have a huge stake in stopping BPL regulation, of course. But they don't seem to have alot of excess funds to play with. The stock prices of the one BPL vendor I was able to find have dropped to under 10% of

what they were a few years ago.

I'd think the anti-BPL forces have alot more campaign cash to spread around. The phone and cable companies have certainly shown their clout with the FCC over the last few years, and they don't seem to be putting any effort into blocking the entry of their new competitor.

Votes are certainly an issue, however. Neither political party has taken an anti-BPL stance. If the FCC blocks BPL, it puts the party in power into a no-win situaton. The other party would claim the FCC blocked BPL because it didn't care about "the people's right to high speed access" but blocked BPL because "the FCC is in the pocket of the telecom and cable fat cats". Some of the states in the upcoming election will be decided with razor thin margins, and even tiny issues such as BPL might make a difference.

I have for sale a Hallicrafters SX-117 Receiver. It does work, but
seems to need an alignment. Sensitivity is low.
It is complete and original. Cosmetically, it is nice. A few small scratches
in the paint of the cabinet. Face plate is great.
Knob inserts have some scratches. Chassis could use some cleaning.
Comes with origial manual. This is a Ham Band receiver, but has several
optional positions on the Band Switch to add Crystals for 500 Mhz segments
of Shortwave Bands.
Price is $175 plus shipping from 79602. Digital pictures available. Thanks,
Charlie Hugg

Spending billions to do what is already in place and cost the taxpayers nothing...amateur radio. Sounds just like the government.

3962. lafayette kt-200 deafness

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-27 00:37:46 UTC
From: bobinphx <rbelisle1@cox.net>
Message-ID: <znhNc.125$1o.3@fed1read06>
Source record: 22722

I have rebuilt a kt-200, but its still deaf. All shortwave bands receive very strong in the middle of the band, but are deaf at either end of the band. This happens across all 3 shortwave bands. The broadcast band appears to be fine. I confirmed this deafness with my signal generator (latter checked on a working radio, to insure that my sig gen was ok) ....

Anyone have any ideas???????????? alignment?????

Bob in phx

Sounds like a classic case of "crossover mistuning" in the alignment. The trimmer caps that set the oscillator freq at the high end of each band may be tuned to the wrong side of the incoming signal.

The local oscillator will probably be on the correct side of the signal at the low end of a band, because hte trimmer cap can't swing much down there against the full capacity of the main tuning cap.

Since your radio works best in the middle of each band, not the bottom, you may have the coil tuning slugs misaligned at the bottom end too.

Start by using your singla generator to check your dial calibration from top to bottom of each band -- jsut roughly will do. And check which side the "image" or spurious response comes in -- with the generator highelr or lower than the proper signal frequency.

It's possible your oscillator trimmers and slugs are set up correctly, but the mixer or RF antenna tweaks are crossed over.
Best wishes and 73, Mike K.

Then those drone aircraft repeaters should include MARS and
amateur, RACES capabilities.

When the aircraft fly for training and operational tests, the
amateur radio service stands ready to provide thousands of volunteer
operators who will stress-test the system and publish operational
test results in the Contest pages of CQ and QST magazines.

These voluteers will supply their own VHF and UHF stations and will
operate them for hours at any time of the day or night. All they
ask is a few hundred kHz of aircraft repeater bandwidth on
frequencies already allocated to the MARS and amateur services.
This is a no-cost addition to a computer controlled, frequency agile
repeater.

In a civil emergency, amateur radio stands ready with billions of
dollars of privately funded communications equipment and self
trained and Volunteer-Examined licencees.

My experience with this matches your own. I found that Goo-Gone worked less badly than anything else, but I never found anything that worked really well. Once the volatiles are gone from that adhesive, it is very difficult to get the backing off, and it is very difficult to get solvents to penetrate the backing paper. I thought about putting the pieces of plastic in a darkroom tray, covering them with solvent, and letting them stand for a while, possibly covering the tray with some plastic wrap to reduce evaporative losses, but I never got a round tuit.

Borrow your wifes blow dryer.
Start at one corner and hold the heat on the paper
until the glue gets soft, once you've got a
little lifted point the heat under the paper between
it and the plexi.
Just keep heating and lifting till it's off.
Works great of old masking tape too.

I found that kerosine applied sparingly to the paper and allowed to
penetrate just long enough to soften the adhesive worked nicely.

A trick I use with price tags and labels is pull very slowly with a constant force giveing the adhesive time to let go without tearing the paper. A little heat helps too. Don't know if it will work with plexiglass.

For sale, PICKUP ONLY, a large! collection of vacuum tubes. NOS, used, not so used,
from 0A2 >> 117Z, 1000 maybe 2000, don't know for sure but a lot. Most are in boxes and alphabetically arranged in about a dozen, cut down Xerox paper boxes. Total weight maybe 200 pounds. I am keeping the "high value" stuff for now (12AX7, 6L6xx, 1L6, sweep tubes) those ebay-able types are not included. I am asking $300 for the whole lot. I'll try to take some pictures and post them this weekend.
Conditions of sale:
1) You must pick up, I will NOT ship and you must take them all. We are moving and I don't want to move them again.
2) Cash only.

I am located just south of Detroit Michigan, in Allen Park.

Larry -

The ETO Alpha 77 and 86 series were also used for a number of industrial,
military, medical and scientific purposes.
I have seen some of these, and the consensus is .. it is possible - BUT it
becomes part fabrication, part homebrew
and it takes time. The reason I mentioned Dick Byrd is that he restored on
of these units .. and knows what it
requires (not for the faint of heart or pocketbook).

Source record: 22739

Can't help it - must comment....

Gentlemen, the world is changing.

You are seeing this money being spent because for years the FAA has been try to squash RPV and AFV aircraft. The FAA consists of and is for licensed pilots who don't want to share airspace with non-human piloted vehicles.

Obviously a lot of pilots could be out of a job if RPV/AFV's become common place. The FAA would also loose a fair amount of regulatory power.

So it was in everyone's interest to squash development by simply making it illegal to even fly a RPV/AFV without a special permit which of course was made impossibly hard to get.

The war on Terrorism changed all that. For the first time a RPV launched a air to ground missile with a confirmed kill. The rules of warfare suddenly changed that day.

At this years air show at Farnborough - the number one attraction is...

You guessed it - Military RPV/AFV's !

So now we have this project...

> > So we're spending billions developing these drone aircraft
> > to create an emergency communication network by deploying
> > a fleet of them around the country to allow coast-to-coast
> > contact between emergency agencies.
> >
> > Ironic, isn't it?

Actually no, what is really going on is contractors putting the squeeze on the FAA under the guise of "homeland security". If the FAA continues on it's path of doing nothing with RPV/AFV's then Industry (and the Pentagon) can come back to congress and point fingers. So far the FAA is at a low point for letting terrorists come to the US and train to fly aircraft into buildings.

> Spending billions to do what is already in place and cost the taxpayers
> nothing...amateur radio. Sounds just like the government.
>

Actually this is an old idea - Military has been doing this since the mid-30's with planes and even dirigibles! (both tethered and free flying). They have equipment and aircraft today that can do the same thing with manned human pilots.

But they want to see development proceed on RPV/AFV's.

SOME AGENCIES HAVE ALREADY GONE AHEAD - The INS in conjunction with the Border Patrol has HECTOR, an unmarked RPV made in Israel which they fly along the border with Mexico. When the FAA found out about it they were livid and asked for an explanation. INS said Flight paths between Mexico and U.S are well defined. Hector flys days and nights in areas where legal aircraft are not supposed to be. Hector has FLIR but no NAV lights so you can't see him but he can see you. No too hard to imagine that the INS flys Hector pretty much where they want to - even well past the border into Mexico.

Then those drone aircraft repeaters should include MARS and amateur, RACES capabilities.

When the aircraft fly for training and operational tests, the amateur radio service stands ready to provide thousands of volunteer operators who will stress-test the system and publish operational test results in the Contest pages of CQ and QST magazines.

These voluteers will supply their own VHF and UHF stations and will operate them for hours at any time of the day or night. All they ask is a few hundred kHz of aircraft repeater bandwidth on frequencies already allocated to the MARS and amateur services. This is a no-cost addition to a computer controlled, frequency agile repeater.

In a civil emergency, amateur radio stands ready with billions of dollars of privately funded communications equipment and self trained and Volunteer-Examined licencees.

ah6gi/4 - WAS-Aircraft Repeater wanna-be.

ALL TOO TRUE !!! BUT LETS GO FARTHER !!!!

HAMS HAVE A LONG HISTORY OF RC AIRCRAFT - ANYONE EVER VISITED THE ARRL'S RADIO MUSEUM KNOWS THIS.

(1) RPV/AFV AIRCRAFT IS EASIER AND CHEAPER TO BUILD THAN A SATELLITE !

(2) MATERIALS ARE COMMON AND EASY TO WORK WITH

(3) IT CAN EASILY BE LAUNCHED TO 100K FEET USING A HELIUM WEATHER BALLOON!

(4) LOTS OF HAMS HAVE EXPERIENCE LAUNCHING AND THESE BALOONS!

(5) NO SPECIAL LAUNCH SITE OR GOVERNEMNT CONTROLLED LAUNCH VEHICLE NEEDED !

(6) CAN BE RECOVERED AND REBUILT AND UPGRADED - A SATELLITE CAN'T BE

SO... WOULD THE FAA GIVE BIZ WDï¿½HCO PERMISSION TO BUILD AND FLY AN RPV/AFV?

NO

WOULD THEY GIVE A AMATEUR GROUP LIKE AMSAT PERMISSION TO DO SO?

PROBABLY NOT -

BUT WE WOULD BE "IN LINE" WHEN THE DOORS SWING OPEN.

IF BOEING AND OTHERS ARE ALLOWED TO BUILD AND FLY THEM - WHY NOT US?

IN SHORT - STOP BEGGING FOR A RIDE ON GOVERNEMNT RPV/AFV PROJECTS.

LET BUILD ONE OURSELVES! YOU LISTENING AMSAT ????

THE MORE I THINK ABOUT IT THE MORE EXCITED I BECOME - SURELY THERE MUST BE NEGATIVES TO THIS....

I've just acquired an old TS-510/U signal generator in excellent condition (for free!). I know it's the same as an HP-608 (probably the "D" model, since it covers 10-420 MHz). I used to have a 608A many years ago, so I'm pretty familiar with the operation, however, I really don't know how to use the crystal calibrator function. Can anybody give me some advice on how the xtal cal works and how to use it? I'd love to find a mil service manual for this generator also, but I'm not holding my breath!

Thanks,
Mike Harmon, WB0LDJ

Its just like on your receiver (an older one!). Plug in a headset. The calibrator puts out 1MHz points up to 270 MHz, then every 5MHz. Set the dial to the nearest whole 1 or 5 MHz frequency checkpoint (depending on the band/frequency you're using) and zero beat. Then, adjust the dial cursor for that whole MHz. Hope that does it for you. Oh yeah, be sure and turn the calibrator off when you're done.... de K3HVG

3991. Hallicrafters SX-28A advice needed!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-29 01:59:09 UTC
From: "Chuck...K1KW" <cdoneal@comcast.net>
Message-ID: <MRYNc.205523$Oq2.19846@attbi_s52>
Source record: 22552

Hi Folks,

I inherited a *mint* virtually a *NIB* SX-28-A with a May 8, 1946 inspection tag still attached. I have always liked the SX-28 and this was an unexpecetd surprise! This SX-28A looks as new. I spent many hours restoring two others, years ago, sold one, and the other I use almost daily. This is my question. I fired this SX-28A up and it works, but it had problems. First was the filter caps. Replaced them and now it works reasonably well. Measured the resistors and found many wayyyyy out of tolerance! For example, a 1 meg was measuring 3.5 meg and a 470 K was at 700K. Some others were within 10%. Do I fix this and make it work, or keep it original and not working as well as it could? I checked the leakage on the caps in the AVC line and found one .02 very bad, replaced it and now it seems to be pretty sensitive. I know I could make this rig much better by doing the standard cap and resistor replacement with an alignment, but....I guess I'm now wondering about preserving the original design. A shelf queen with the attendent *collector* value or a working rig...that is the question (replacing those caps in the RF deck is a major pain!!!)

Thanks!

Chuck...K1KW

I'd replace the resistors with good vintage carbon comps.

The wax caps and filter cans can be restuffed fairly easily. Use a heat gun to gut the wax caps, and restuff with axial mylars. seal with hot glue.

If you're not going to replace the leaky wax caps (and they are), I personally
wouldn't play it. For the heck of it, if you do restore it, measure the AC current
draw before and after new caps.

Pete

3999. FS AS NEW COLLINS HF-380 Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-07-29 14:20:13 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <BI7Oc.2206$Oz2.136@okepread06>
Source record: 22560

I have for sale my HF-380. It was purchased new by Bell Helicopter Avionics Department as a KWM-380 and converted by their technicians. They also installed the Service Bulletins and Mods. I have the manual and documentation of the work they
performed. This transceiver has the Noise Blanker, the Speech Processor, and a couple of optional filters.
This HF-380 was seldom used before it was sold at a Bell Helicopter auction. I purchased it from the lucky
fellow who bought it at auction. I have also talked with the retired Bell Helicopter employee who
ordered it new from Collins. He knows its history. I can provide his name and phone # for those interested. The rig works great except for a few minor problems.
The Power Output Meter shows only a fraction of the actual power and the ALC function
does not work. Output on an outboard wattmeter is over 100 watts. I understand that this is a simple fix,
replacement of a diode. I have used this rig very little in the time that I have had it. Price is $3750 firm.
This is as close to a brand new HF-380 as your likely to find.
Pictures available upon request. Thanks, Charlie Hugg, K5MBX

So why don't you use YOUR power supply to test them? Or does 'untested'
mean "I tried them out and they are stone dead so better unload them".
Seems
a simple thing to fire them up with your supply.

Thank you for taking the time to read this.

Your Freedoms are in jeopardy! RadioShack Corporation has filed an injunction in a Texas Court that has shut down an opinion website, http://www.radioshacksucks.com, in direct violation of the Freedoms of Speech, Expression and Peaceful Assembly, as guaranteed to us by the Constitution of the United States. If other companies learn of this, they will use it against any website that speaks out against that company. This is extremely dangerous, as it will change the face and scope of the Internet.

If Big Business continues to dominate our lifestyles, we will lose our freedom to worship as we see fit. We will lose our freedom to vote for the candidate that we think will do the better job. We will lose our freedom of the press to accurately report on current events. We will lose everything we have fought and died for in the past 228 years Do not tell this to the descendants of those that have bravely fought in previous battles and wars, for their ancestors would have died in vain. The Constitution will have been overruled by Big Business.

RadioShack is on a vicious witch hunt and will not stop until they dominate our lives. RadioShack must be stopped now, before it gets any later or any worse.

Here is what you can do to help: copy this letter and add your signature to the bottom. Mail it to the following people:

Leonard H Roberts
CEO RadioShack Corporation
100 Throckmorton Plaza
Ft Worth, TX 76102

The Honorable Kenneth Curry
401 W BELKNAP
153RD DISTRICT COURT
FORT WORTH, TX, 76196-0225

Thank you for your help and support.

Chuck,

Yes it's a pain to properly restore an SX-28 or 28A. But, this is a receiver that was made to be USED. I fail to see the point of having a receiver that isn't used, or isn't capable of being used. Perhaps I'm prejudiced, because there's a soft spot in my heart for the SX-28. I'm on my third restoration. My last one was real interesting and I wrote about one aspect of it that hadn't been covered before. See http://www.w9wze.org for the article, "Secrets of the SX-28 Gearbox." So I say, restore it, restuff the capacitors if you want to keep the authenticity. Oh, and the RF box is a lot easier when all the screws aren't rusted.

What's wrong with Radio Shack, anyway? I bought something there both yesterday and today. Had what I wanted a cheap enough. No problems.

Anybody can sue anybody. Why should this upset anybody. That's the American way. Sue enough people and you might even become a politician......maybe even a presidential or vice-presidential candidate. My freedoms are certainly not in jeopardy because RS sues somebody....quite the opposite. This just shows what freedoms we have.

Source record: 22578

Hi Folks,

Bottom line: I'm going to get it going and replace all the caps and any out of tolerance resistors. Nothing else, although after studying the schematic, it would be a piece of cake to replace the 6J5 BFO tube with a 6SA7 and turn it into a product detector in the CW mode. The dual AGC of the SX-28 would really work well enabled on SSB....but...we'll see....probably not stable enough but the one I'm using now is pretty good after warm-up.

The response I got was unexpected, over 40 direct replies so far. About 1/4 feel that I should not touch it and make it a shelf queen. I thought I'd see what others felt and if I had received an overwhelming response to leave it alone, I would have considered it, given that I already have a working one I use...but...I really enjoy getting these rigs going again. I'll probably give the one I'm using now to my 23 yr old nephew who has his Tech and is showing real interest in tube radios!

73,
Chuck...K1KW

Chuck -

Bill Orr had a circuit to do just this in his older Radio Handbooks (1960's
?)

> The response I got was unexpected, over 40 direct replies so

I believe that you whould have it working, as best as possible.
The don't touch it crowd reminds me of a neighbor that had a Model T in a
barn (rusting)
.. "I don't want to touch it .. its worth something" That was 35 years ago
.. its worthless now ....
metal was go far gone -- nothing to restore -- good for a handful of parts
to other Model Ts.

Nothing rare about the 5KHz filter, it was the standard
filter, and all SB-310's came with it. The CW and SSB
filters are the optional ones.

But considering most of the SB line was SSB, the 5KHz filter probably
was generally less common. Obviously in the SB-310 it would be
uncommon to not find a 5KHz filter, but beyond that, how many installed
AM filters in the other SB rigs?

I did , on an SB-310 (6KC) the 5KC is still to narrow and muddy for my
taste.
I loved the receiver but the 2 diode noise blanker is useless, lacks general
coverage, MW band

Ham Radio Horizons Magazine - First Issue.....$25 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered in March of 1977. This was a spinoff of Ham radio magazine by Jim Fisk designed targeting beginning and new hams. This issue is in excellent condition inside and still has the mailing cover over it. This mailing cover is a duplicate of the front cover. The back side has a handwritten address along with 26 cents in US postage.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

National Type MCN Dial.....$30 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Realistic DX-160 Communications Receiver and Matching Speaker......$135 plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It has a BFO for CW and SSB reception and bandspread for the ham bands. This radio will run on 110 volts AC or you can run it from a 12 volt battery. Other than a few very minor scuffs, this receiver is in really nice shape and works well on all bands. I even heard some signals down in the VLF band. Includes a photocopy of the manual.

http://members.cox.net/radiostuff9/dx1604.jpg
http://members.cox.net/radiostuff9/dx1606.jpg

Heathkit SB-604 External Speaker.....$40 plus shipping
This is the matching speaker for the SB-104. The speaker sounds great and is in nice shape with a few minor scuffs.
http://members.cox.net/radiostuff9/heath_sb604.jpg
http://members.cox.net/radiostuff9/heath_sb6042.jpg

Cold War Relic - Civil Defense - Radiological Survey Meter......$85 plus shipping
These are NOS meters painted in Cvil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm

Schaub Lorenz "T30L Weekend" German Portable Radio.....$45 plus
shipping
This is a Portable Radio made in Germany. As near as I can determine
this radio is from the late 1950's or early 1960's. This is a 3 band
transistor radio that covers long wave, medium wave (standard broadcast
band) and FM. The radio is in beautiful shape cosmetically but it is not
working. I can hear weak audio from the speaker but no stations. Their
is no battery acid damage. The two antennas are in good shape. The
insides are clean.

Help: Yaesu FT101EE Problem
I have a Yaesu FT-101EE And when I turn the Heater switch to on
position, the radio turns off. It receives fine, But Helpas I said
when I flip the Heater switch on, the radio shuts down.
My power supply is at 13.8 volts and when I hit the heater switch on
the volts go down to zero and radio shuts down. Its not the power
supply, I hooked it up to another power supply Astron 70 amp and same
thing. I don't have the ac cord, so I'm using an external power
supply. Appreciate any help.............Rich

Not having a schematic to be more definitive, it sounds like you have a short on the main supply. You don't say if a "fuse" is popping or not, but it could be pulling it down enough to make the set go dark. Shorted tube, Bad connection, etc. Hard for me to say with out a schematic. Try swapping out the tubes just to see if it does the same thing. OR if you have a tube tester, check them for shorts. What is your Power supply doing? Humming more than usual when it happens, popping a fuse/breaker? Sorry can't be more helpful.

Still sorting through the stuff I bought.

In the pile was a Hallicrafters Ultra-Skyrider. Doing a google search, I found one site and identified it as an S-10.

Now that one site says this is an extremely rare radio as only 200 were built.

Can anyone confirm? I am not a Halli collector and know so very little about them.

Does the rarity affect the value or is it too basic of a set to have any extreme value?

Any help will be appreciated.

The SX-10 is rare. I've seen the go for around $350-600 depending on
condition. I,m sure an excellent example could fetch more. I've also seen
poor examples go for a lot less. Under $200

The 5 kHz filter isn't rare in the SB-310. But of the SB filters
that show up on eBay, 500 Hz, 2.1 kHz, 3.75 kHz, and 5.0 kHz, the
5.0 kHz is the rarest and priciest.

A 3.75 kHz just went for over fifty bucks in spirited bidding.
Most folk consider the 3.75 as a poor value compared to the 5.0
kHz for AM work.

It's not just SWLing, there are more AM'ers on 75 meters than
ever. That 5.0 kHz filter fits in the SB-300, 301, 303 ham band
receivers too.

I expect that someone will buy that 310 for the filter but perhaps
not. The 310 is an interesting radio on its own.

7. 1998 ARRL Radio Amateur's Handbook, softbound version. $7
8. The ARRL Antenna Book, 1970 Edition. $3
9. The ARRL Antenna Book, 15th edition, 1988, $6
10. The ARRL Antenna Book, 17th edition, 1994, no software. $7
11. The Radio Amateur's VHF Manual, 1972 version. $5
12. Radio Frequency Interference: How to Find it and Fix it. c. 1991.
$6
13. Specialized Communications Techniques, First edition, 1975. $3

Other Ham Radio, Antenna & Misc. Books:

1. RSGB - HF Antennas for All Locations, by L. A. Moxon, G6XN.
Hardbound. $10
2. RSGB Radio Communication Handbook, Fourth Edition, hardbound, c.
1968. $10
3. The UHF Compendium, parts 1 and 2, by K. Weiner DJ9HO (English
version, softbound.) $6
4. 1993 Dayton Hamvention Antenna Forum Transcripts and Proceedings.
$5
Covers the following topics discussed at the 1993 Dayton Antenna
forum:
New Thoughts on Yagi Wind Load
HF Propagation Angles
TH7DXX Stacked Yagis
New Antenna Ideas from Computer Models
Comparison of Log Periodics to Monobanders
Low Frequency Antennas Hints and Kinks
Wire Yagis for 80 Meters
Solar and Geomagnetic Effects on Long Distance Propagation
5. Mathematics for Electricians and Radiomen, by Nelson M. Cook.
Hardbound, c. 1942. $4

6. TV and Other Receiving Antennas, by Arnold Bailey, Hardbound, c. 1950. $5
7. Marconi ï¿½ Wireless on Cape Cod, by Michael E. Whatley. $3
8. The Vibroplex, Co., Inc. 1890 to 1990, by William R. Holly. Softbound, autographed. $5
9. Antennas, by L. V. Blake. C. 1984, hardbound. $15
10. IEEE Standard Test Procedures for Antennas, by IEEE, c.1979, hardbound. $15
11. Antenna Engineering Handbook, second edition, by Richard C. Johnson and Henry Jasik. c. 1984, 1961, hardbound, BIG book (1408 pages, 946 Illustrations!) $35

Radio Amateur Callbook Magazines (Flying Horse):

1. Spring, 1949 ï¿½ covers U. S. and Foreign. Fair Condition, $5
2. Winter 1962-63 ï¿½ U. S. version. $5
3. 1986 International Listings. $2
4. 1989 North American Listings - $4
5. 1991 North American Listings - $4

Original (NOT a Copy) Heathkit Assembly/Instruction Manuals:

1. Antenna Coupler, model AC-1. $5
2. VFO, model # VF-1. $6
3. VFO, model HG-10 $7
4. Transmitter, model DX-100B $12
5. Phone patch, model HD-15 $4

ICOM Manuals:

1. IC-PS20 AC Power Supply Instruction Manual ï¿½ new, still in original plastic bag. $2
2. ICOM IC-745 HF Transceiver Service Manual ï¿½ original Orange Covers. $30
3. ICOM IC-751 HF Transceiver Service Manual ï¿½ original Orange Covers. $30
4. ICOM IC-2AT 2-Meter handheld radio ï¿½ instruction manual and schematic sheets. $6

All book prices shown do not include postage. Shipping can go via inexpensive Media Mail, CONUS.

4038. Help with Miller AT-2500 Autotuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-01 02:07:34 UTC
From: Bob Rinaldi <w1cny@comcast.net>
Message-ID: <GfYOc.195107$IQ4.3359@attbi_s02>
Source record: 22649

Hello:

I have a Miller AT-2500 tuner, and it works fine using it with an exciter.

The manual is not clear on running it with an amplifier, and I do not have a schematic which shows the circuits for the rear RCA jacks.

If anyone has experience with this tuner and an amplifier, I'd sure like to ask a couple of questions!

Thanks!
Bob W1CNY

You may have a heater-to-cathode short on one of the final tubes
(or less likely, the driver tube). A Tube tester
would be helpful, or you could just remove one tube at a time
and see if the problem goes away. If so, Bingo,
that's your bad tube.

Usually when I see someone bitching about Radio Shack it's from one of
the small brained no-lifers who get their kicks from going to Radio Shack
and trying to show off how much more technically intelligent they are than
the clerks behind the counter.

Unfortunately, I can't make an assessment of your web site to see if it's
of the same ilk, because it appears to be shut down.

Awww.....

Let's all say 'Too F...in Bad" in unison. Doesn't seem like you're getting
the
internet support you wanted!

If you don't like Radio Shack, why do you go there? Unless, of course,
you like the abuse you think you get, and go just to get more ammo!

Wait, I didn't come here for abuse, I came for an argument! Arguments
are two doors down on the right.

4048. How much should a Drake T-4XB put out on 40 meters?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-01 17:57:39 UTC
From: alkjalksdfjlkj@hotmail.com
Message-ID: <410d2e16.296616@news.verizon.net>
Source record: 22659

I recently purchased a very nice looking set of Drake twins. I have the R-4B and the T-4XB. The output of my T-4XB on 40 meter LSB is about 25 to 40 watts on voice peaks. The CW tune position maxes out around 90 watts. Is this the normal output for a Drake T-4XB? The manual says 200 watts input, but 90 watts maximum out is only about 45% efficiency. The tubes are two 6jb6 tubes.

Thanks,

MR

It should do a bit better than that. I recall the one I had (many moons ago) was good for about 120w out on 40 CW and was down to 90-100 or so up at 10 meters with fresh tubes. What you see for voice peaks isn't very indicative because that may vary with different meters.

If its just 40 thats off it may need some tweaking. Somebody with a better memory (or a handy manual) is welcome to chime in with a correction but iirc they specified Sylvania? finals and I found that it made a difference to use the specified brand.

A quick Google search showed that http://www.isesurplus.com/490.htm
lists them for $8.85 each. - BUT - they only have one in stock.
(stock number 26157)

We use NTE27s at work to repair inverters for Cab Signaling equipment. Very large and dated germanium devices, I suspect NTE is rapidly depleting the remaining supply.

For an inverter, it would seem a lot easier to put a silicon transistor in
there and change the biasing. You may have to add some base capacitance too,
but it's not like making the change on an RF circuit... with the inverter
the stage just has to turn on and off.

Since you are using the rig on DC that means you are using the DC to AC
convertor on the back of the radio. I would then say the problem is in that
unit. As all it does is apply a pulsating DC voltage (fake AC) to the input
of the transformer. This makes the High and Medium voltages required for
the tubes to operate.

Find a AC cord and try that.

Dan/W4NTI

Accessory is for external QF1 Q Multiplier.
Pinouts
Pin 1=Ground
Pin 3=250VDC B+
Pin 8=12VAC Fils

Got my AR-3 in 1959 in grade school. Still have it (and the manual,
obviously) and I fire it up and smoke test it once a year or so. When I
got my novice it was paired up with an Eico 720 transmitter.

Well, I find it hard to believe that, in a weak moment, I visited the site mentioned below. It is obvious that a great deal of time and effort has gone into this thing, and to what cause? To save our rights? Me thinks not. What rights are we having trampled? You're right to slander RadioShack? That right is only in your mind. You are most likely a relatively well educated individual with many personal conflicts in his life and I feel deeply for you, but mostly your parents and family members. They most likely put up with your drivvel year after year and detest the site of you.

Why don't we just cut to the chase, and you explain, in a very short sentence or a very, very short paragraph what caused you to create this Radio Shack site that you claim sucks so bad that it has obviously destroyed your life and those of your loved ones? When They haven't harmed you. You are harming them by saying to the world that they suck.

I have enjoyed Radio Shack for many years. I was there when they became RadioShack, and I became a valued customer (I believe that because I still get free catalogs in the mail, not many do anymore 'ya know) to them and grew through the whole gammit of stuff they have added over the years and I must say that when I had a problem with a product, and that was extremely rare, they took care of it. In one case the manager returned my money because it was a last item and he couldn't replace it. A few years later when computers came along if this had happened, they could check all the stores in their system to see who still had it on the shelf and that store would mail it to me at my home. Is that cool? I say "Yea Verily".

I love Radio Shack. This little reply is probably enough to get you to open up KF5DEsucks.com I won't sue you unless you get nasty. All my friends will check in and post there I'm sure they will have comments to make there, they have a lot of freee speech to use 'ya know. I have a friend that can enlist, in moments hundreds of hackers that believe in not only free speech but free hacking tooo!! Free viruses', free wurmzs, 'n free other stuff too.

After that you can open up another site, KF5DEreallysucks.com

Or, you can channel your efforts into something productive and usefull and possibbly profitable for yourself and your suffering family which will no doubt heal many open wounds.

Butch Magee, KF5DE
Diamondhead, MS 39525

I don't know how experienced you are, so the following advice
will either be an insult or a big help.

What kind of wattmeter are you using? Is it a peak-reading
type, or just a "plain" one? It will make a difference. If
your wattmeter is not a peak-reading unit, then it will only
be displaying average power. On SSB, the average power is
very low. Try applying a tone, such as from the speaker of
your code practice oscillator or keyer, or even whistling
into the mic. If your transmitter is working right, then
the power output should be around the same as it is on CW.

90 Watts sounds a little low for CW, but not alarmingly so.
Your gear may need alignment. Have you tested all of the
tubes on a good quality dynamic tube tester? That's a great
place to start (and something you should do with vintage
gear whether the power output is "normal" or not).

I hope this helps.

Mike, thanks for the reply.

As its untested would you take $275 shipped to zip 32951 for the R-388?
I can pay by paypal or money order.

Thanks

George K4MLB

They're listening to us over in eBay.

A 3.75 kHz SB-series AM filter just went up at $99 buy it now, $89 bid. Seems high but who knows.

The 3.75 is pretty common, especially since some folk are de-filtering radios to sell on eBay. Still, one went for over $50 last week.

The SB-310 we're discussing went for over $300. Not bad given the visual condition of the radio, double boxing, and that it had all three filters.

Hi all,

Having now valved up my GF-11 I really would like to get it on the air. A supply plug (line socket) for the back would be a great help if anyone can find such in their stock ??

and.. while I have a cct diagram its not too clear, so if anyone has the actual pin connection requirements for the Gf-11, again I'd be most obliged.

picture of the back connector at: www.qsl.net/g4bxd/wanted.htm

cheers, Ben G4BXD.

HF Linear Amplifier 80-10 meters single Eimac 4-400 with
separate RF Deck and Power Supply.
Nicely built the RF Deck looks like a Henry.

Output is adjustable with a simple change in value of a grid resistor.
Spare Eimac 4-400 NOS - tested however no hours,
both tubes in great shape.
Prefer pick up - the powersupply is heavy. $275

4082. 4-400A's as a sub for 3-500Z's????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-04 21:35:56 UTC
From: Doug <dslosty@pipeline.com>
Message-ID: <sdl2h0tbpcc07hqjc8unnuh27om9sst0vu@4ax.com>
Source record: 22693

Has anyone tried to use 4-400A or similar tetrode tubes as a
substitute for the 3-500Z?

I know that some folks have connected the control and the screen grids
together. However, since the 4-400A was not made for zero bias use, I
wonder how the IMD products turn out?

Has anyone done any measurements or have real world experiences
substituting tetrodes for zero bias triodes? IMD problems? Bias
problems? Gain problems?

tnx,
Doug/WA1TUT

4090. Ground Radials - a new look!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-05 09:53:11 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cet027$9r2$1@hercules.btinternet.com>
Source record: 22601

NOW AVAILABLE ** New Program "RADIALS2.exe"

This program takes a fresh, revolutionary look at the design and performance of a set of shallow-buried ground radials. Gone at last are the days when 118.5 was a sacred number.

A radial wire is considered as a lossy transmission line, there being no point in having it any longer than that at which its input impedance Zin has converged on its characteristic impedance Zo. The current flowing in the line at that distance from the input end is clearly small enough not to warrant extending the radial any further. With a crude knowledge of the resistivity and permittivity of the soil the greatest practical length of radial wires can be calculated. The number of radials can then be estimated on the logical grounds of economics versus antenna + transmitter radiating efficiency.

Download program RADIALS2, 53 kilobytes, in a few seconds from website below and run immediately.

Hi, Doug

I've got an old copy of "GE Ham News" that lists the 4-65, 4X150A,
4-125, 4-250, 4-400 and 4-1000 as "Only tetrode connection
recommended, triode connection not recommended, but may be possible
with careful checking of grid currents. Fixed bias should be used
for triode connection..."

Tubes listed as "Triode connection suitable..." are the 803,
813, 814, 828 and 837.

The 813 triode-connected rig pioneered by GE (and B&W) had the screen
grounded (pins 3 and 5), and the control grid bypassed by .001
capacitors. Negative bias (-150V) was reduced by a pot
and fed to the control grid via an rf choke.
RF input was fed to the cathodes, isolated by large
bifiliar filament chokes. The bias pot (500 ohm, 25 Watt) was adjusted
for 40mA resting plate current for the pair of 813's.
At 400mA maximum plate current, the grid current was about 100 mA.

The 807 and 1625 are "Not recommended for grounded-grid
operation because of beam-forming plates connected internally
to cathode; may cause instability..."

Ed Knobloch

4095. How to fix a wide trace (noise) on Tek 465 and 475 scopes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-05 13:16:30 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0408050516.1848640e@posting.google.com>
Source record: 22606

HOW TO FIX a wide trace (noise) on Tek 465 and 475 scopes:

I have posted a detailed procedure (another free freebie) for fixing a wide or noisy/fuzzy trace on Tektronix 465 and 475 (most or all Tek 400-series) oscilloscopes [i.e. cleaning the Volts/Div Attenuator (and Bandwidth Limiter and Trigger View) switch contacts], at:

==========

http://www.fullnet.com/u/tomg

==========

It may work wonders for your scope. And you can probably do it yourself, even if you've never opened a scope, before.

It will also usually help repair cases where changing the volts/div switch causes trace distortion, or intermittently gives the wrong vertical amplitude (v/div gain error/problem).

Cheers,

Tom Gootee

4096. Interesting BPL Article in eWeek

Newsgroup: rec.radio.amateur.boatanchors

Check out this article in the August 2, 2004 issue of eWeek:

http://www.eweek.com/article2/0,1759,1630521,00.asp

It's good to see that someone in the IT business understands that BPL
is a bad idea. My hat is off to Peter Coffee for this article. He
obviously understands the issues better than the FCC and IEEE!

Best Regards,

Ed

I do not believe it does. I believe it only models below-ground radials.

Although, I suspect you could do something to model above-ground radials
by just telling it that there is infinite soil resistance.

Hi Doug:
I've got a few friends who use the 4-400's in place of the more expensive 3-500Z's. In fact one who just prefers them. They are a rugged tube, and will work well in GG service. If you can find it, look for W6SAI's info on the 4- series tubes and how to set them up in GG service. I've got one copy here and wont let go of it, but could run some copies of it if you needed it. Title is "Care and Feeding of Power Tetrodes". Lots of good info in it, how to run 'em, how to destroy 'em. I'm sure it's out there in the world somewhere.

The 4- series of tubes was built for broadcast and military use, designed to run bright red and will take a lot of abuse. I use a 4-1000A here on CW (when I need it) and have had no trouble. 3rd order is down 34 DB, output power is 1450 watts at 4 kv. It was a beast to tame for parasitics, but some of AG6K's nichrome chokes and it came right into specs.

Great bottles!

That paper is available on the Eimac website, in something like 8
sections, and is Well Worth The Download.

Google for it and it should show up.

Yes, indeed. They were viewed -- rightly -- as very innovative and
brilliantly designed when they were introduced, and I've seen nothing
to contradict that evaluation.

4112. Re: How much should a Drake T-4XB put out on 40 meters?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-06 16:56:36 UTC
From: sadhkaskjdh@msn.com
Message-ID: <4113b3d9.13684567@127.0.0.1>
Source record: 22622

..and now to answer my own question.

I found the following things needed replacement and adjustment on my Drake T-4XB to bring the RF output up.

1) The 6au7 IF amp tube failed a day or two after I posted this message and needed replacememt (minor increase in power out)
2) The final output tubes needed nuetralization as the peak output and plate meter dip occurred in two entirely different places on 10 meters (some output increase after adjustment}.

The big difference came when I adjusted the little variable capacitors for each band on the left side of the chassis. You have to take the top and bottom covers off to get to these adjustments. The instructions for the alignment procedure are in the Drake T-4XB manual under "Adjustment of RF and Mixer Stages". The Drake T-4XB manual is available on-line at;

http://www.wb4hfn.com/DrakeManuals/T4XB/Manual_T4XB.htm

Look at page 38.

Before adjustment the output looked like this;

80 meters (I forgot what it was on 80 meters)
40 meters - 90 watts
20 meters - 40 watts
15 meters - 40 watts
10 meters - 60 watts

After the alignment;

80 meters - 160 watts
40 meters - 150 watts
20 meters - 120 watts
15 meters - 120 watts
10 meters - 120 watts

The alignment was done in to an MFG 1000 watt dummy load, and the watt meter was a cheapie Radio Shack 500 watt meter from the early 1980s. This is the meter that shows watts, percentage of modulation, and SWR in three seperate meters at the same time.

On looking at various web sites and trying to find some more information on an old Hallicrafters receiver I have, I find nothing with its model number, but I can find an S-77 that appears to be identical in appearance.

I'm speculating that it's probably a Canadian model, (I live in Canada) and made for the ham bands, and I'm guessing its vintage is about 1955.

Can anyone point me to a url that would confirm any of this?

Thanks, Bob

4120. Military Radio Meet, Sept. 17 & 18

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-07 18:52:42 UTC
From: skywaves@webex.net
Message-ID: <c5e9e2cf.0408071052.5db9d557@posting.google.com>
Source record: 22631

FYI:

Hi Gang!

It's that time again!
The MRCA (Military Radio Collector's Association) will hold its 4th annual meet on Friday & Saturday September 17 & 18 at the West End Fairgrounds in Gilbert, Pa. Again we will hold it along with the Red Ball Military Vehicle Show & Swapmeet. This is a very large vehicle show with an extensive swapmeet area.
We have the same excellent facilities that we have enjoyed during the past meets held at the fairgrounds.
Along with our own swapmeet we will have radio operating activities & presentations on military radio related subjects throughout the event.

Please visit our website at www.milradio.org for complete information.

Hope to see you there!!
73,
Steve Finelli N3NNG

I just fell into a Yaesu FT-101B. It seems to work fine, although probably older than I am. Is this a boatanchor worth keeping? does anyone have any accessories for this forty pound behemoth. This is what an early 70's or late 60's rig? The only other older radio I have is a Kenwood TS-530s that is a sweet radio. I guess the big problem I have with the Yaesu 101 is it is a trick to tune. Did they make an accessory LED read out or some such for the 101? I guess I am asking is this radio worth keeping or is it hamfest fodder? Thanks Ron in Colorado

The FT-101 is barely a boatanchor. One or two tubes, and came out in the
early seventies. The 530 is practically a contemporary.

```
Any boatanchor (unless we're talking really high end equipment) had
an analog dial.

4129. Wanted - Weskit BN-1 QRP Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-08 03:29:02 UTC
From: Williams <willi6@erols.com>
Message-ID: <41159DFE.3E0F2178@erols.com>
Source record: 22639

Now that my KnightKit "Ocean Hopper", Ameco AC-1, and National NC-60 projects are well underway, it's time for yet another DXpedition into Nostalgialand.....

I'm looking for a Weskit BN-1 transceiver.

The BN-1 is one of a series of small, battery operated, tube radios (transceivers and receivers) produced by Western Radio of Kearny, NE. The BN-1 was aimed at the Novice (hence, the "N") and covered 80/40 Meters, was XTAL controlled, and was battery powered (hence, the "B"). It was available as a BN-1K (kit form) and also
the BN-1A (improved circuitry). The normal small cabinet was fiberboard material, although a metal case was available for $3.50!!!

The tube was a dual triode (3A5) that served as the XMTR and RCVR.

you started QRP with a single 45 Volt battery and could work up to QRO with a couple of 90 Volt batteries.

They normally advertised with small (one column inch) ads in the back of Electronics Illustrated and Popular Electronics. The Western Radio (WESKIT) line also included:

Allband Transceiver (BAB-1)
Six Meter Xcvr (BA6-1)
Two Meter Xcvr (BA2-1)
Citizens Band (C27B)
All Band Receiver (BR-1)

I had one of these as a kid (isn't that always the story); but, traded it to a local radio shop for a batch of SWL books, (Actually a good deal at the time - before nostalgia set in!)

If you have one of this cute little rigs you'd like to part with, drop me an E-Mail at: willi6@erols.com

Ron,

It is a pretty good radio, I owned one for twenty years as my "main" rig. Stable,
sensitive receiver, effective noise blanker. Not much of an "anchor", tho...since most of it is solid-state. If it has an AM filter (hard to obtain and a mod necessary to install)....it would really be a keeper! The AM transmit quality is very good....Yeasu modulates a low-level RF butter transistor and the signal is linear amplified by the 12BY7 and sweep finals....a very effective system.

Current value ain't much at a fest, probably 150-200 bucks.

Last fest I went to a guy had one marked at 200 and took it home.

One more: if you every have to service the thing beware the modules, without the proper extenders it is an impossibility, compare that to a Kenwood 520 which is easier to get around inside the chassis.

I used an FT101 for many years. With the tubes and the analog dial, it certainly is a boatanchor in my book. Beloved boat-anchor, perhaps?

The old righas some stability problems and really wouldn't work with modern computer generated modes. But for old fashioned SSB, CW and RTTY, it was a lot of fun. The 101 also lacks split capability, which means serious pile-ups cannot be entered. A second vfo is part of the answer, but is very hard to find.
